Well, let me ask another question, and you are right his son was
also killed but that does not constitute a slaughter.

Do you put some of the blame on on Weaver for happened or do you see
it only as the FBI? Would his son and wife still be alive if he
didn't follow the life style he did? Would his wife and son be
alive today if he would have given up and not tried to fight the
FBI?

Jeff, I don't live in fear otherwise I would not be a police
officer. But if you do get to accustom to the everyday doldrums
then you do let your guard down and that is all it takes.

Also we were talking about guns and knives which most people have
access to. I don't think many have access to meteorites.....

Jeffrey Herman wrote:

Well, there's two issues here.

One is 'practical'. In that sense, the mobile is listening on one band and playing it out on the other. With that in mind, once it starts it won't stop, until the input stops. So do you really want to set up BOTH directions? Remember, if you use it to listen to access a repeater with a monoband HT, it will CONTINUE to transmit the repeater output to you until the repeater tail drops. That can make it VERY difficult to get 'back into' a repeater. I've seen repeaters that take 15 seconds to drop the tail. Even with quick tails on the repeater, if ANYONE ELSE gets in, you won't, cause your mobile will never drop and change over to where YOU can transmit through it. (This is something almost NO-ONE ever thinks about in advance when they set these things up!)

So in a practical sense, use a DUAL band HT. Have the HT actually listen to the freqency you want to receive, and use only half the mobile as a cross band repeat to get high power back to the repeater.

If you mean simplex to talk to someone, then it's actually easier to let the mobile do it both ways.

Now for the 'other' issue. The legality...

One part of the legality is the ID of the mobile unit. You should ID on ALL output frequencies. So if you are only using the mobile for the outgoing direction, that's easy, ID on your HT, and you ID on the mobile. But if it's in BOTH directions, you need to be able to ID through the mobile there as well, so in that case, you need a dualband HT (or a second HT) to be able to transmit the ID so that it's repeatable on BOTH output bands of the mobile.

Now another little 'gotcha' most people don't consider. To run a mobile like this you have to 'control' it. If it's parked in the driveway outside a house, you could argue you're still in control, but what about leaving the vehicle for even a short time somewhere? Where is the control? Through your HT, right? But remember, you MUST be above 222Mhz for control operations, which means you MUST have a 440 link to be in control. It's not illegal to actually use the 2M side to control the radio, but legally you must STILL HAVE the 440 link available (and functional) for the link to be legal.

Wasn't one of the other men on site killed as well?

> Do you put some of the blame on on Weaver for happened or do you see
> it only as the FBI?

Weaver's lifestyle and life choices made him a prime target for entrapment by the FBI. As has been reported, and denied, but not disproven, Weaver was approached by authority, to purchase illegal weapons undercover. He declined under pressure. That authority then followed through on its threats is not indispute not too far out of line.
What is directly the fault of authority, is the death of his son, shot in the back running away, (there was no justification for firing this shot) and the death of Weaver's wife, shot through the head behind a door holding nothing more lethal than her infant son. This was hot dogging at it's finest, something the FBI, of late, has become notorious for.

According to procedure, a sharpshooter is ONLY to squeeze the trigger AFTER verifying EXACTLY where the bullet will fall, and WHOM will be the recipient. This shot was not justifiable, and the FBI needs to take serious heat for this death.

> Would his son and wife still be alive if he
> didn't follow the life style he did?

No, because in the final analysis, the shots fired were not justified.

> Would his wife and son be
> alive today if he would have given up and not tried to fight the
> FBI?

Probably. But the response to the incursion was just. Authority had no business assuming a firefight without first contact.

Sometimes you come to the hill so heavily defended, you create hostility.

We expect more from our authority than that. As you well know.

How can you say he was not partly responsible? If you take your
family to a bad side of town and you get robbed and your wife shot,
does all the blame go to the robber/killer or should you shoulder
some of the blame.

Did Weaver and others at the compound also shoot at the FBI? There
was shooting from the Weaver compound at the Agents during the
siege. I know this does not justify what happened but again Weaver
needs to shoulder some of the blame on what happened. HE could have
stopped it before it got out of hand and let the courts decide.

We blame everything that happens to us on someone or something else
instead of taking blame of some blame ourselves for our own actions.

I'm assuming that your detective shield isn't being minted. Read
again more closely, I did address this very issue.

> If you take your
> family to a bad side of town and you get robbed and your wife shot,
> does all the blame go to the robber/killer or should you shoulder
> some of the blame.

Making the victim responsible for the crime. Now THAT's a new one
from an officer.
>
> Did Weaver and others at the compound also shoot at the FBI? There
> was shooting from the Weaver compound at the Agents during the
> siege. I know this does not justify what happened but again Weaver

He tried that. He tried to get out of the lifestyle that he had
been involved in. He was impressed into the position by authority.
And since this issue has already been stipulated to, you need to pay
more attention to the details of the case before you dismiss
responsibility of authority.
>
> We blame everything that happens to us on someone or something else
> instead of taking blame of some blame ourselves for our own actions.

No WE, don't.... SOME do. In this case the scenario was created by
authority, unecessarily. And, again, the fatal shots fired were not
justified by the procedural guidelines re sharpshooters, or the use
of deadly force in confrontation. The son was shot in the back,
running away, that was unnecessary. The wife was shot by a
sharpshooter who was not justified in firing the round, as he had
not verified where the bullet would impact. And you seem to be
unwilling to address these issues, despite the convictions handed
down for them.

Quite frankly, on a personal note, your unwillingness to address
these essential issues makes me more than a little uncomfortable as
a citizen.

My favorite still was the guy at Dayton
wearin the kakhai shorts, green
socks with patent leather shoes, and a
red shirt with pith hat. Computer shows
may be a magnet for geeks, but hamfests
still attract every whacked-out screwball
for miles around. Dayton: More fun than a circus
freaks-of-nature sideshow.

20. Re: mobile radio noise in a saturn

Considering the use of plastic panels, in place of steel, I'm sure shielding is much less than other cars. If the noise is a whine, that varies with the speed of the engine, then it's probably coming from the alternator. Almost any radio shop, even Radio Shack, has filter kits to resolve this. If it's more of a static ticking, or popping noise, at an idle, and changes with engine speed, it's probably the distributor, spark plug ignition system. There are filters available for this also, from automobile parts centers, and again, Radio Shack. If it's not one of those, then possible the cars computer system, in which case you should probably contact the manufacture.

Get the new Alinco DJ-V5T HT. It transmits on both
144 and 440 mHz. Clip one wire on the PC board and you get
5 selectable "banks" with 70-998 mHz coverage.

The Alinco is also on special right now from Grove Enterprises
for just $249.98 + shipping. webpage at www.grove-ent.com/index.html

Dwight, let me put this in the FCC's language: You've been issued
a station license for Station W5NET, and an operator's license to
operate Station W5NET. That your name appears with W5NET in the
FCC's data base just shows that you're the control operator of
Station W5NET.

As long as you remain control operator, you're permitted allow
anyone to operate Station W5NET. (Try THAT with your SS#!).

Decades ago, we were issued separate station and operator licenses;
now the piece of paper we receive contains both, yet the two are
still distinct in the FCC's eyes. To the FCC, you are Dwight Stewart
and your station is W5NET, but you are not W5NET.

There is a broadcast station with callsign WEST. Over the years I've
had several students with the name West. Should station WEST
complain of "identity theft" that there are people named West?
How about if all the people named West file a class action lawsuit
against that broadcast station WEST? Identity theft? Hardly.

This is the response just received.

Hello,

You have read a really good book with beautiful ideas about the origin of life on earth.

Do you know the third theory about origins of life on earth ?
UFO - the final message given by extraterrestrials.
They created humanity scientifically in their laboratories, thanks to DNA.

Traces of this epic masterpiece can be found not only in the bible, but in the ancient texts of many cultures.
However in the original bible it does not say "God" but "ELOHIM" which in ancient hebrew means "those who came from the sky". ELOHIM is a plural word, the singular being "ELOHA".

As you told in your e-mail, the jewish people has a direct link with these E.T. And the ark of covenant was a radio receiver.

It was they who sent all the PROPHETS such as Moses, Jesus and Mohammed to progressively educate humanity with a message adapted to the level of understanding of each age.

Now that we are ourselsves synthesising DNA and so are scientifically advanced enough to undestand our origins, they wish us to prepare an EMBASSY for them where thy can meet with us, our governments and the media-without favouring one country or ideology above another.

To know more, go on the website www.rael.org and read the book "the true face of god".

What are you thinking about this ?
Thank you and best regards

Do what I did-DUMP THAT DAWG OF A CAR! I felt patriotic in '92 and bought a brand new four door automatic with accoutrements. Kept it for EIGHT months and then farewell. I bought a used 1950 Studebaker and it's running like a finely would clock. When you drive by a Saturn and hear that noise, it's really a stink disgused as noise.

Dave a dualband H/T is not necessary, although several others have pointed out good reasons for using one, I do, myself. I use the xbr in my car to relay the local 2m repeater on 440mhz so I can receive it inside a steel building at work. I use the 2m side of my H/T to monitor the output of my mobile to the local repeater. As for the legal ID matter, I would suspect that the FCC would view your IDing on the H/T as complying with the spirit of the law, even though the xbr mobile doesn't ID itself. After all, the FCC did type-accept these radios.

Peter quote 'Making the victim responsible for the crime. Now THAT's
a new one from an officer.'

I am not making the victim responsible but if you put yourself into
a situation that you know can cause you harm you 'are partially'
responsible for the consequences. I am 'not' saying that the
Government and the FBI shooter is not responsible. They are very
much responsible as is Randy Weaver.

I tried this many years ago with mixed results. The crossband mobile
repeater won't switch to the other mode until the repeater drops
carrier. This is, of course, a problem in a rolling qso between 8
hams on a repeater with a 10 second squelch tail.

Yaesu had the right idea long ago. I have a BIG Yaesu "half-duplex"
HT whos model number escapes me at the moment. I set my mobile dual
band repeater to listen to an odd, totally unused UHF frequency and
the VHF side to transmit on the repeater input freq and listen to
144.000 with tight squelch....so it never heard anything on VHF to
switch the link. The HT was set to transmit on the odd UHF frequency
of the car's receiver and receive DIRECTLY on the repeater's output
freq on VHF.....half duplex.

In use, I'd be transmitting on UHF to the car on the lowest power the
HT had, 1/2 w. The car would retransmit the HT on the repeater input
frequency but NEVER receive on VHF to switch it....half duplex car.
The repeater would be listened to, DIRECTLY, for all the other
stations. AS the system never needed to let the carrier drop and my
50W transmitter in the car was on the repeater input, noone noticed I
was actually sitting at the bar at my favorite watering hole, unless,
of course, they could hear the giggling of my companion in the
background....(c;

73, Larry W4CSC
Maybe I'll dig up that old HT. It's here, somewheres.

You can have two types of "cross-band" repeat setups. One way is to set up the mobile radio to receive on 2 meters (your usual setup I.E. 146.34 input/146.94 output) and transmit and receive on a 440 simplex frequency. You would listen on your HT to the 440 simplex frequency. When you wanted to transmit you would transmit on the 440 simplex frequency and your mobile rig would retransmit your signal on 2 meters. As pointed out in another post the repeater would have to drop completely before you could transmit. This mode is helpful when you are in a building and cannot hear the 2 meter repeater. This is duplex cross-band and would only require a 440 HT.

The second way is to set up your mobile to listen on a 440 simplex frequency and transmit on 2 meters only on the repeater input frequency. You would use a dual band HT to listen to the repeater. When you transmitted, the mobile would retransmit your signal on the input of the repeater. The nice thing here is you do not have to wait for the repeater to drop out.

The "secret" to either method is to PL wherever possible. You should definitely PL the 440 frequency (your choice of PL tones - I suggest a tone lower than 100.0 to avoid hearing the tone)! It is to your advantage to choose one of the recommended mobile cross-band frequencies for your area. If your favorite repeater is not PL'ed, you should think about PL'ing the 2 meter side. That way, if someone is talking on the input you can still key up your transmitter. I know the Yaesu radios will not let you transmit if it hears someone on the input (the radio is unsquelched). Adding a PL means the radio is not unsquelched, and you can transmit. Obviously if your favorite repeater is PL'ed you will have to PL the 2 meter side with that PL tone.

Hope this helps
Max

I'd look for a single-band transceiver, probably using 2 meters. Your concern about repeaters versus simplex (radio-to-radio) really doesn't apply. Repeaters just use portions of whatever band they are on -- receiving on one frequency and transmitting on an offset frequency. Radio-to-radio (simplex) transmits and receives on the same frequency.

I've seen and used some quality HT's that get anywhere from 1/2 watt up to 3 watts from AA's, depending on the manufacturer, on a rubber duck. The only other thing I'd look for is a wide RX range. Don't worry too much about the AM bands, but you'll be able to scan public safety bands and monitor weather radio if you get the right spread. This might be helpful, not for nosiness but for information if you're off the beaten path. Also understand, though, you won't be able to transmit, just receive on that bandwidth. And that's where the repeater may come in handy. Being able to hit a local repeater increases the distance you can get away from the crowds and still be in touch with emergency help.

You ought to be able to get a pair of Alinco DJ180TH for around $300 +/- They're spec'ed at 5 watts. The Icom ICT2H runs about $240 each and is rated at 6 watts. The Kenwood TH22AT is about $200, 5 watts. The Yaesu FT23MKII/12 is a 5 watter in the $160 range. I'm guessing these are all NiCad (or similar) battery packs. Whether they have a AA option, I don't know.

The same manufacturers have dual-banders (2M/440) for anywhere from $50-75 more. And tri-band (6M/2M/440) for another $75-100 (guessing here). I have a dual-band 2M/440 that has the 5W battery pack and I bought a AA pack that gives me around 3W (cost was $15). The price on that was $275 then. I hear it's around $240 now.

Check out these manufacturers' prices at one of the online dealers:
AES in Milwaukee -- http://www.aesham.com/index.html
R&L in Hamilton, OH -- http://www.randl.com/new/
Universal in Columbus, OH -- http://www.universal-radio.com/
are a few in this area. There must be another dozen or so.

If you go with 2 meters, line of sight should be fairly easy on anything in the 5 mile range with the rubber ducks. An inexpensive mag mount on the car seems to double my range in fairly hilly country -- not mountains, just rolling hills.

Get ahold of the repeater directory...even though you won't be using the repeaters...to see what the repeater assignments are in the area you'll be using the radios. You'll want to use "simplex" frequencies that are not assigned to repeaters in that area so that your communications don't use either the transmit or the receive frequencies of those repeaters. I

found the ARRL repeater directory to be quite helpful in finding simplex frequencies on either 2M or 440.

Also totally neutral...the Internet and USENET are not ham radio and are not governed by its rules. Someone could use the "handle" or "screen name" AF2Y on any Internet forum. There just ain't no connection between the license/callsign and the 'Net. Will there ever be? Who knows? Some states will reserve callsign plates for Hams. But I don't think that's in the FCC regulations. May be, though, who knows. Meanwhile, I think someone just figured out a way to really yank someone else's chain.

I don't think anyone was suggesting you are stupid! :-)

Why not record the position of the diodes, then change one and see by
how much the frequency changes. Put it back, then change another and
see again by how much the frequency changes, and so on.

After a while, you may find a pattern will emerge, and you could maybe
work it all out for yourself.

Well it seems like a better idea than simply throwing it in the bin.

73, Chris

I've taken notice of the fact that not one of his sycophants posted a reply.
This reinforces something I've suspected for a while.
I might be mistaken but I think Herbie had prostate cancer but the condition was hushed up; in fact once I asked him about it to which he replied negatively and I let it ride.
There was also speculation that his trip to Africa was really to a hospital in Puerto Rico to undergo castration in order to slow down the spread of the disease.
For the longest time no one has spoken about him which I found odd since had always been a high profile troublemaker even without a valid license. It seemed that word of his illness, impending death and actual death was told to one or two of his cronies in the states and requested to be retained in his inner circle of Shicklgrubers.
I may be way off base and if I am, then let one of his buddies or Herbie himself come on this board and dispel my hunch. I write on intuition only-I have no proof but I simply have this gut feeling that KV4FZ joined KA4MUJ.
No I am not nor will I grave dance even though I loathed the guy because he was a family man and just a year younger than I.
If he did die, be he enemy or friend, it makes us think of our own mortality and to be quite frank-it's frightening.
And I'm no hypocrite either because I never liked him but still found him to be interesting and challenging plus sadistic.
And so I ask that someone in the know come on here and level with us.

And let me venture other guesses. Even if Herbie did die, no one besides his family knows about it because Monika knew how disliked he was both on and off ham radio and decided to keep an obit out of the Saint Croix Avis as well as the Saint Thomas Daily News.
And I'll go further. Now I think I know why he was never taken off the air despite losing all those appeals. He told the FCC in confidence of his terminally ill state, had a physician sign off on it and they decided to let the situation ride. Furthermore I doubt if he ever told lawyer Colby.
Yup, that's quite a coverup by the Schoenbohms but I got to hand it to Herbie-he went out fighting if he indeed he has shuffled off this mortal coil.
Now if anyone can prove me wrong, I invite replies either to my mailbox or on here.

>> Jeff W5NET

>OOOOooooooooooohhhhh!!!
>I'm telling!

Who? The Federal Internet Commission? I could very well use Dwight's
car license plate as a CB callsign, and you still couldn't cite any
law or regulation that was broken.

QST showed a photo of a private airplane who's FAA number happened to
be someone else's callsign.

The number and letters which make up our callsigns have no meaning when
used outside of the ARS. I could very well apply for a vanity license
plate reading "W5NET" and neither you nor Dwight would be able to find
any law that was broken. W5 could very well be the name of a business
with a web site of w5.net

Again, cite, instead of adding to the misinformation which permeates
these groups.

Jeff

Here's what I envision: Gun manufacturers are going to be the targets
of lawsuits filed by victims and their families, just as the tobacco
industry is being targeted right now. Their argument (which can't be
used against the automobile manufacturers) is that a gun is manufac-
tured only with a purpose to kill. Such lawsuits will cost the gun
industry hundreds of millions of dollars and may put many out of
business.

Mark my words -- this will come to pass.

Yah don't really keep the Mercury vapor light, but replace it with a better,
shielded light.

My garage/shop has 2 250 watt floods on each corner but they are seldom on.
Even when tripped they illuminate the area around the garage instead of the
sky, or whole neighborhood.

Actually each corner has its own sensor. I can also turn them on manually if
I wish.

1991-2000

K3FU's maintenance of the Amateur Radio Elmers Resource Directory ending on
June 1st, 2000.

The following letter was sent to all current Elmers indicating my
resignation from maintenance of this 9-year resource. Thanks to all
the volunteer Elmers, as well as courteous list users, for making this
service a success. Discussions are currently underway with several
parties interested in taking it over, so watch this space later this
summer for redirection to the new site.

Message-Id: <200005090348.e493mmG21920@oasis.novia.net>
From: pschleck@novia.net (Paul W Schleck K3FU)
Subject: Amateur Radio Elmers Resource Directory Going Off-Line
Reply-To: elmers-request@novia.net (Elmers List Administrivia Mailbox)
Status: OR

The following is an important notice to all "Elmers" in the Amateur
Radio Elmers Resource Directory:

http://www.novia.net/~pschleck/elmers/

Note that you are only receiving this message because your E-mail
address appears, with your consent, in the above Directory. As this is
an appropriate, and rare, update to the Elmers from the Directory
Maintainer, this is not unsolicited or indiscriminantly-sent junk mail.

I regret to announce that the Amateur Radio Elmers Resource Directory, a
list of experts, mentors, and gurus for amateur radio on the Internet,
will be going QRT as of June 1, 2000 after just over 9 years of service.
This decision is not being forced upon me by anyone for any particular
legal or technical reason. Rather, I've decided to retire from
```

maintenance to focus on other personal and professional interests and obligations.

Though substantially automated, the Directory still requires a non-trivial amount of time and effort to maintain it, such that updates had gone from monthly to approximately quarterly. If I try to continue the Directory, it's clear that updates would likely slip to less than a few times a year. The average turnover rate for individual Elmers (half drop out every two years) means that many registering Elmers would probably quit or otherwise lose interest before they are even added to the Directory. I feel that this is an unacceptable level of customer service for me to provide.

I also feel that I've taken this project to the limit of my expertise and spare time in terms of format, visibility, automation of maintenance, effective recruiting, and even good Web design. It's clear that the Internet has changed greatly over the 9 years that the Directory has been in existence. The Directory has evolved from a flat text file edited on a VAX running VMS to a well-featured Web site. However, in that time, much better amateur radio-related web sites have emerged (including QRZ, Ham Radio Online, and ARRL) that make my site rather simplistic by comparison. Also, it's clear that many more enhancements would be required to make the Directory more maintainable and secure. One obvious need that the current Directory does not address is reasonably shielding the Elmers from having their E-mail addresses harvested for junk-mail distribution lists. I'm sure that this is a significant reason why recruiting has dropped off significantly in the past two years.

I want to emphasize that I do believe that using the Internet, the Usenet Newsgroups, and the World-Wide Web to bring Elmers and amateurs requiring assistance together continues to be worthwhile. Because of this, I would consider a highly-qualified and motivated volunteer to take it over immediately. The Directory consists of a moderate number of large text files, scripts, and other configuration files. It's neatly arranged, and can probably be easily transplanted to another Unix/Linux environment. However, very little documentation exists. The ideal candidate will be a motivated self-starter and self-teacher possessing several years of experience in:

- Unix/Linux
- C
- HTML
- Perl
- Procmail
- Source Code Control System (SCCS) or Revision Control System (RCS)
- Ispell
- Gnu Emacs

(this also implies that you have the above tools installed in your environment)

and have approximately 6-8 hours of spare time per month for
maintenance. Because of the likely significant effort to transition
this project to another maintainer, a sincere interest in maintaining
the directory for at least another 3 years would also be required.

Familiarity with news.answers formatting conventions and the auto-faq
FAQ Management and Posting Package would be a plus. Concrete proposals
for enhancing the Directory to be a top-10 amateur-radio-related Web
site would also be desirable. I would also consider the Directory being
incorporated into an existing commercial amateur-radio-related Web site
as long as the essential non-commercial character of the Directory was
maintained.

If you feel that you possess the interest, motivation, and immediate,
hit-the-ground-running, skill set to do this, please send your resume,
statement of interest, and any proposals you wish to make regarding
your plans for future enhancements if selected, in confidence to
elmers-request@novia.net. Serious inquiries only, please.

I would like to thank all of the volunteer Elmers, as well as courteous
users of the Directory, for making this service a success, as well as an
enjoyable experience for me over the last 9 years.

1991-2000

K3FU's maintenance of the Amateur Radio Elmers Resource Directory ending on
June 1st, 2000.

The following letter was sent to all current Elmers indicating my
resignation from maintenance of this 9-year resource. Thanks to all
the volunteer Elmers, as well as courteous list users, for making this
service a success. Discussions are currently underway with several
parties interested in taking it over, so watch this space later this
summer for redirection to the new site.

Message-Id: <200005090348.e493mmG21920@oasis.novia.net>
From: pschleck@novia.net (Paul W Schleck K3FU)
Subject: Amateur Radio Elmers Resource Directory Going Off-Line
Reply-To: elmers-request@novia.net (Elmers List Administrivia Mailbox)
Status: OR

The following is an important notice to all "Elmers" in the Amateur
Radio Elmers Resource Directory:

http://www.novia.net/~pschleck/elmers/

Note that you are only receiving this message because your E-mail
address appears, with your consent, in the above Directory. As this is
an appropriate, and rare, update to the Elmers from the Directory
Maintainer, this is not unsolicited or indiscriminantly-sent junk mail.

I regret to announce that the Amateur Radio Elmers Resource Directory, a
list of experts, mentors, and gurus for amateur radio on the Internet,
will be going QRT as of June 1, 2000 after just over 9 years of service.
This decision is not being forced upon me by anyone for any particular
legal or technical reason. Rather, I've decided to retire from

maintenance to focus on other personal and professional interests and obligations.

Though substantially automated, the Directory still requires a non-trivial amount of time and effort to maintain it, such that updates had gone from monthly to approximately quarterly. If I try to continue the Directory, it's clear that updates would likely slip to less than a few times a year. The average turnover rate for individual Elmers (half drop out every two years) means that many registering Elmers would probably quit or otherwise lose interest before they are even added to the Directory. I feel that this is an unacceptable level of customer service for me to provide.

I also feel that I've taken this project to the limit of my expertise and spare time in terms of format, visibility, automation of maintenance, effective recruiting, and even good Web design. It's clear that the Internet has changed greatly over the 9 years that the Directory has been in existence. The Directory has evolved from a flat text file edited on a VAX running VMS to a well-featured Web site. However, in that time, much better amateur radio-related web sites have emerged (including QRZ, Ham Radio Online, and ARRL) that make my site rather simplistic by comparison. Also, it's clear that many more enhancements would be required to make the Directory more maintainable and secure. One obvious need that the current Directory does not address is reasonably shielding the Elmers from having their E-mail addresses harvested for junk-mail distribution lists. I'm sure that this is a significant reason why recruiting has dropped off significantly in the past two years.

I want to emphasize that I do believe that using the Internet, the Usenet Newsgroups, and the World-Wide Web to bring Elmers and amateurs requiring assistance together continues to be worthwhile. Because of this, I would consider a highly-qualified and motivated volunteer to take it over immediately. The Directory consists of a moderate number of large text files, scripts, and other configuration files. It's neatly arranged, and can probably be easily transplanted to another Unix/Linux environment. However, very little documentation exists. The ideal candidate will be a motivated self-starter and self-teacher possessing several years of experience in:

- Unix/Linux
- C
- HTML
- Perl
- Procmail
- Source Code Control System (SCCS) or Revision Control System (RCS)
- Ispell
- Gnu Emacs

(this also implies that you have the above tools installed in your environment)

and have approximately 6-8 hours of spare time per month for
maintenance. Because of the likely significant effort to transition
this project to another maintainer, a sincere interest in maintaining
the directory for at least another 3 years would also be required.

Familiarity with news.answers formatting conventions and the auto-faq
FAQ Management and Posting Package would be a plus. Concrete proposals
for enhancing the Directory to be a top-10 amateur-radio-related Web
site would also be desirable. I would also consider the Directory being
incorporated into an existing commercial amateur-radio-related Web site
as long as the essential non-commercial character of the Directory was
maintained.

If you feel that you possess the interest, motivation, and immediate,
hit-the-ground-running, skill set to do this, please send your resume,
statement of interest, and any proposals you wish to make regarding
your plans for future enhancements if selected, in confidence to
elmers-request@novia.net. Serious inquiries only, please.

I would like to thank all of the volunteer Elmers, as well as courteous
users of the Directory, for making this service a success, as well as an
enjoyable experience for me over the last 9 years.

From: pschleck@novia.net (Paul W Schleck K3FU)
Subject: Amateur Radio Elmers Resource Directory Going Off-Line
Reply-To: elmers-request@novia.net (Elmers List Administrivia Mailbox)
Status: OR

The following is an important notice to all "Elmers" in the Amateur
Radio Elmers Resource Directory:

http://www.novia.net/~pschleck/elmers/

Note that you are only receiving this message because your E-mail
address appears, with your consent, in the above Directory. As this is
an appropriate, and rare, update to the Elmers from the Directory
Maintainer, this is not unsolicited or indiscriminantly-sent junk mail.

I regret to announce that the Amateur Radio Elmers Resource Directory, a
list of experts, mentors, and gurus for amateur radio on the Internet,
will be going QRT as of June 1, 2000 after just over 9 years of service.
This decision is not being forced upon me by anyone for any particular
legal or technical reason. Rather, I've decided to retire from

maintenance to focus on other personal and professional interests and obligations.

Though substantially automated, the Directory still requires a non-trivial amount of time and effort to maintain it, such that updates had gone from monthly to approximately quarterly. If I try to continue the Directory, it's clear that updates would likely slip to less than a few times a year. The average turnover rate for individual Elmers (half drop out every two years) means that many registering Elmers would probably quit or otherwise lose interest before they are even added to the Directory. I feel that this is an unacceptable level of customer service for me to provide.

I also feel that I've taken this project to the limit of my expertise and spare time in terms of format, visibility, automation of maintenance, effective recruiting, and even good Web design. It's clear that the Internet has changed greatly over the 9 years that the Directory has been in existence. The Directory has evolved from a flat text file edited on a VAX running VMS to a well-featured Web site. However, in that time, much better amateur radio-related web sites have emerged (including QRZ, Ham Radio Online, and ARRL) that make my site rather simplistic by comparison. Also, it's clear that many more enhancements would be required to make the Directory more maintainable and secure. One obvious need that the current Directory does not address is reasonably shielding the Elmers from having their E-mail addresses harvested for junk-mail distribution lists. I'm sure that this is a significant reason why recruiting has dropped off significantly in the past two years.

I want to emphasize that I do believe that using the Internet, the Usenet Newsgroups, and the World-Wide Web to bring Elmers and amateurs requiring assistance together continues to be worthwhile. Because of this, I would consider a highly-qualified and motivated volunteer to take it over immediately. The Directory consists of a moderate number of large text files, scripts, and other configuration files. It's neatly arranged, and can probably be easily transplanted to another Unix/Linux environment. However, very little documentation exists. The ideal candidate will be a motivated self-starter and self-teacher possessing several years of experience in:

- Unix/Linux
- C
- HTML
- Perl
- Procmail
- Source Code Control System (SCCS) or Revision Control System (RCS)
- Ispell
- Gnu Emacs

(this also implies that you have the above tools installed in your environment)

and have approximately 6-8 hours of spare time per month for
maintenance. Because of the likely significant effort to transition
this project to another maintainer, a sincere interest in maintaining
the directory for at least another 3 years would also be required.

Familiarity with news.answers formatting conventions and the auto-faq
FAQ Management and Posting Package would be a plus. Concrete proposals
for enhancing the Directory to be a top-10 amateur-radio-related Web
site would also be desirable. I would also consider the Directory being
incorporated into an existing commercial amateur-radio-related Web site
as long as the essential non-commercial character of the Directory was
maintained.

If you feel that you possess the interest, motivation, and immediate,
hit-the-ground-running, skill set to do this, please send your resume,
statement of interest, and any proposals you wish to make regarding
your plans for future enhancements if selected, in confidence to
elmers-request@novia.net. Serious inquiries only, please.

I would like to thank all of the volunteer Elmers, as well as courteous
users of the Directory, for making this service a success, as well as an
enjoyable experience for me over the last 9 years.

However, in that time, much better amateur radio-related web sites have emerged (including QRZ, Ham Radio Online, and ARRL) that make my site rather simplistic by comparison. Also, it's clear that many more enhancements would be required to make the Directory more maintainable and secure. One obvious need that the current Directory does not address is reasonably shielding the Elmers from having their E-mail addresses harvested for junk-mail distribution lists. I'm sure that this is a significant reason why recruiting has dropped off significantly in the past two years.

I want to emphasize that I do believe that using the Internet, the Usenet Newsgroups, and the World-Wide Web to bring Elmers and amateurs requiring assistance together continues to be worthwhile. Because of this, I would consider a highly-qualified and motivated volunteer to take it over immediately. The Directory consists of a moderate number of large text files, scripts, and other configuration files. It's neatly arranged, and can probably be easily transplanted to another Unix/Linux environment. However, very little documentation exists. The ideal candidate will be a motivated self-starter and self-teacher possessing several years of experience in:

- Unix/Linux
- C
- HTML
- Perl
- Procmail
- Source Code Control System (SCCS) or Revision Control System (RCS)
- Ispell
- Gnu Emacs

(this also implies that you have the above tools installed in your environment)

and have approximately 6-8 hours of spare time per month for
maintenance. Because of the likely significant effort to transition
this project to another maintainer, a sincere interest in maintaining
the directory for at least another 3 years would also be required.

Familiarity with news.answers formatting conventions and the auto-faq
FAQ Management and Posting Package would be a plus. Concrete proposals
for enhancing the Directory to be a top-10 amateur-radio-related Web
site would also be desirable. I would also consider the Directory being
incorporated into an existing commercial amateur-radio-related Web site
as long as the essential non-commercial character of the Directory was
maintained.

If you feel that you possess the interest, motivation, and immediate,
hit-the-ground-running, skill set to do this, please send your resume,
statement of interest, and any proposals you wish to make regarding
your plans for future enhancements if selected, in confidence to
elmers-request@novia.net. Serious inquiries only, please.

I would like to thank all of the volunteer Elmers, as well as courteous
users of the Directory, for making this service a success, as well as an
enjoyable experience for me over the last 9 years.

1991-2000

K3FU's maintenance of the Amateur Radio Elmers Resource Directory ending on
June 1st, 2000.

The following letter was sent to all current Elmers indicating my
resignation from maintenance of this 9-year resource. Thanks to all
the volunteer Elmers, as well as courteous list users, for making this
service a success. Discussions are currently underway with several
parties interested in taking it over, so watch this space later this
summer for redirection to the new site.

Message-Id: <200005090348.e493mmG21920@oasis.novia.net>
From: pschleck@novia.net (Paul W Schleck K3FU)
Subject: Amateur Radio Elmers Resource Directory Going Off-Line
Reply-To: elmers-request@novia.net (Elmers List Administrivia Mailbox)
Status: OR

The following is an important notice to all "Elmers" in the Amateur
Radio Elmers Resource Directory:

http://www.novia.net/~pschleck/elmers/

Note that you are only receiving this message because your E-mail
address appears, with your consent, in the above Directory. As this is
an appropriate, and rare, update to the Elmers from the Directory
Maintainer, this is not unsolicited or indiscriminantly-sent junk mail.

I regret to announce that the Amateur Radio Elmers Resource Directory, a
list of experts, mentors, and gurus for amateur radio on the Internet,
will be going QRT as of June 1, 2000 after just over 9 years of service.
This decision is not being forced upon me by anyone for any particular
legal or technical reason. Rather, I've decided to retire from
```

maintenance to focus on other personal and professional interests and obligations.

Though substantially automated, the Directory still requires a non-trivial amount of time and effort to maintain it, such that updates had gone from monthly to approximately quarterly. If I try to continue the Directory, it's clear that updates would likely slip to less than a few times a year. The average turnover rate for individual Elmers (half drop out every two years) means that many registering Elmers would probably quit or otherwise lose interest before they are even added to the Directory. I feel that this is an unacceptable level of customer service for me to provide.

I also feel that I've taken this project to the limit of my expertise and spare time in terms of format, visibility, automation of maintenance, effective recruiting, and even good Web design. It's clear that the Internet has changed greatly over the 9 years that the Directory has been in existence. The Directory has evolved from a flat text file edited on a VAX running VMS to a well-featured Web site. However, in that time, much better amateur radio-related web sites have emerged (including QRZ, Ham Radio Online, and ARRL) that make my site rather simplistic by comparison. Also, it's clear that many more enhancements would be required to make the Directory more maintainable and secure. One obvious need that the current Directory does not address is reasonably shielding the Elmers from having their E-mail addresses harvested for junk-mail distribution lists. I'm sure that this is a significant reason why recruiting has dropped off significantly in the past two years.

I want to emphasize that I do believe that using the Internet, the Usenet Newsgroups, and the World-Wide Web to bring Elmers and amateurs requiring assistance together continues to be worthwhile. Because of this, I would consider a highly-qualified and motivated volunteer to take it over immediately. The Directory consists of a moderate number of large text files, scripts, and other configuration files. It's hard to answer that with a simple yes/no. Why? Because the T500
is NEWER that the T490 series. Yes, the T500 did use a diode matrix
in the standard unit. The T490 series used a dual 2716 sub-board.

It appears that you're confusing the purpose of your callsign with
that of your SS#. Outside of radio communications, the letters and
number "W5NET" doesn't identify anyone or anything. It's not your
identity outside the field of radio, even thought you might identify
with it. Remember the example I gave earlier: Someone's amateur callsign
does double duty as an FAA identification on someone else's private
airplane. Identity theft? Hardly.

My callsign appeared in an article reference number in someone else's
NG article. Identity theft? Hardly.

A car's license plate number, ABC123, is issued by a government body
but it only identifies a car. Off the road, anyone else could use
ABC123 for whatever they desire. Identity theft? Hardly.

It must trouble you that there are dozens of other people across the
country named "Dwight Stewart." Identity theft? Hardly.

Jeff

Does anyone know how i can get a copy of the programing software for
the ht1250. I am on a small local fire department and we would like to
program our radios. We are not happy will the service from the motorola
dealer 50 miles away.

That was not the original argument you made to me, Jeff. You placed my ham radio callsign next to your name in this radio newsgroup and then challenged me to cite a law or regulation that was broken. And I clearly did that in another posting to this thread.

In that message, I made the argument that you cannot, by law, use any "means of identification" that belongs to me as a means to identify yourself. That is identity theft, which is covered in the Identity Theft and Assumption Deterrence Act of 1998 (a copy is posted elsewhere in this thread).

You are correct when you say that the specific letters and numbers in my callsign do not belong to me, so they can appear anywhere. However, as a "means of identification," especially as it relates to radio, that callsign belongs to me and you are not free to use it as a means to identify yourself.

71. Crossband repeater question

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-01 00:00:00 UTC
From: Dave Horoschak <dth@snip.net>
Message-ID: <39360D8A.93F26AFD@snip.net>
Source record: 110024
Cross-posted to: alt.ham-radio.vhf-uhf,alt.ham-radio.fm,rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm looking for an HT to be used with my Kenwood mobile radio. I want to use the mobile system as a crossband repeater. My questions are:

1. Why is a dual band HT required? Shouldn't the HT just talk simplex to the mobile radio on one band (the repeated version of the original signal) until it sees a signal on the HT TX freq at which point it changes the original freq to TX?

2. I can see why you would need dual band for a fixed band repeater - because the HT is the only receiver since the only thing being repeated is the TX from the HT. Right?

3. Assuming I do need a dual band HT, is the correct way to set this up to set the mobile radio as though it were going to transmit & receive on both bands, and set up the non-HT band as the control. (I think this is right according to the manual.) Then set up the HT to simplex mode on both frequencies. (the repeated frequency and the original)

I guess what I really don't understand is why the HT needs to be set with the original frequnecy when the repeater is repeating it on the new band anyway.

Can any provide some clarification?

Thanks.
- Dave

That is not the original argument you made to me, Jeff. You placed my ham radio callsign next to your name in the signature area of a message that was posted in this radio newsgroup and then challenged me to cite a law or regulation that was broken. And I clearly did that.

You cannot, by law, use any "means of identification" that belongs to me as a means to identify yourself. That is identity theft, which is covered in the Identity Theft and Assumption Deterrence Act of 1998.

Yes, you are correct when you say that the specific letters and numbers in my callsign do not belong to me, so they can appear elsewhere. However, as a "means of identification," especially as it relates to radio, that callsign belongs to me and you are not free to use it as a means to identify yourself. Therefore, you are not free to use my radio callsign to identify yourself in this radio related newsgroup.

By the way, you are also not free to use that callsign (those letters and number) in any environment outside radio as a "means of identification" if you do so in a manner that leads someone to believe that you are me. That is also identity theft - no different than using my SSN, driver's license number, or any other "means of identification," to lead someone into believing you are me.

<<...ones with life I'll refurbish and either give to the kids for schoolwork >>

Great post, Paul. This - and not eBay/Dayton greed - is what ham radio is all about.

I'm not that old, but I recall hams in the 1970's GIVING newcomers pieces of excess equipment. If a Novice needed a rig to get on the air, someone would "loan" them an old Heathkit they had laying around.

A little of this old time ham spirit still exists. Not too long ago I posted a notice on one of the newsgroups looking for old fashioned pointer knobs for a transmitter project. A ham responded by sending me a set for FREE with not even a charge for postage. Another time I was mailed a manual I needed, also entirely free.

This has a very positive effect. I now feel obligated to pass the favor on, i.e., if I have a manual or some small part someone needs, it will go out for free rather than being auctioned off to the highest bidder.

Of course no one expects a ham to give away their rare vintage equipment or hi-buck Japanese transceivers. But it's nice to think that when the situation warrants, hams reject the temptation of eBay money lust and Fleamarket greed and come forward to lend each other a hand when they can.

The way I do it is with a dual band HT and a dual band mobile - not because the HT has to be dual band but because that way I have the option of how I want to set it up. For example I could park my 4WD on a hill top and use it as a cross band repeater (whilst I go hunting or walking), set up on 2 freq's - one 2metre freq and one 70cm freq. I have found that the best way to use the setup is to have the 2 metre frequency linking to me whilst I am walking around and the 70cm freq linking to a repeater or to a friends place.
The way it works is that I transmit on 2metres on my HT, and my mobile in the car receives me on 2 metres and simultaneously retransmits my signal out on 70 cm, therefore "crossbanding" my signal.
It works the same coming the opposite way, the 70cm repeater (or my friend) transmits a signal on 70cm which is then picked up by the 70cm receiver in my car and is then simultaneously retransmitted on 2m which I then pick up on my handheld.
The benefit of this sort of system is that I can be in a radio "blackspot" and still get out to the rest of the world - as long as I don't move out of range from my car.
As you can see you don't have to have a dual band HT, however you might want to put a signal into a 2m repeater from your crossbanding radio which would necessitate a 70cm HT. Instead of having two HT's (i.e. one 2metre and one 70cm HT) a dual band is more convenient.
You could of course construct your own portable repeater but why bother when your dualband radio will do the same job - albeight somewhat differently.

Cheers

Matt

If your Kenwood mobile is the TM-V7A it does exactly that from what I've read in the manual. Please note I have NOT tried it myself so can't guarantee it.

Seems to me that a man with 3.6 million in net worth would not register a car in the state of S.C. that was as old as the old Towncar that he bought. !!!! What did he do, trade in the old 1973 Mercury. The X-WB2OTK must be running some type of taxi service with that kind of "pimpmobile". Everyone should check out the state of S.C. Dept. Of Motor Vehicle registrations. I certainly hope that he doesn't try to drive over to K-mart and try the ole five finger discount !!!!, again.

As a follow-up,
I have noticed that if I increase the length of the 'shielded
long wire' by connecting several long wire coaxes together, then
terminate securely into the rig, the attenuation decreases, and
I can pick up signals accross all bands.

Seems the problem is my lack of understanding about transmission
line and antenna theory!

My two cents says that the no-coders are a welcome presence, not only because of the clout they afford all of us at the spectrum bargaining table, but also (and more importantly) because as individual people, they make the hobby that much more enjoyable and interesting, just as we coders do, right down to the QSO.

And then, all of us who know the code know too that in a pinch, we coders are more efficient operators, and then outside of a pinch, CW is tons of fun. Try copying EME CW with a computer! Or how much fun is it to tell your non-ham buddies, in the middle of a good-ole war movie, when they ask you "Hey...you're a ham...what does that code mean?", "Gee....um....I'm not really that kind of ham...".

As with anything and everything else, the more you know, the more you can do, the better you are.

The greatest shame is that the code is so easy to learn, anybody can do it, and look at all of this fuss over it all! Much ado about nothing!

There's room enough for all of us!

Hey Sycho...

When all of the support infrastructure that makes your
electronic goodies fail, will you be able to communicate with
anyone about anything?

We will!!

I can make a small spark-gap transmitter (better yet, three or
four spark gap transmitters) from a busted up transistor radio.
If I happen to have a few hundred feet of wire, I can generate
electricity with my bare feet.

Can you? Can you tear apart an apparently dead battery of cells
to determine which cell(s) is bad, remove it, and get useable
current from the rest?

Can you generate a distress signal using only your wits and and
a pile of electronic "junk"?

You don't understand the art of amateur radio.

See you on the island! Going rate: Two quarts of water (de-
salinated only) for 2 minutes on the transmitter.

JB

technocrat,
Increasing the length till it's about a full wave length
makes this a 'snake' antenna, sort of. If you will place a
50 ohm carbon resister acrosss the far end you might see/hear
a large increase in signal. How well it works depends on the
coax length. Best results are with a full wave length at the
frequency you want to listen to. Sort of a 'poor man's Beverage.
Space and length get to be a problem at lower frequencies.
'Doc

rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O

Didn't try and I don't want to better places to spend my time and money. Who needs a damn test to operate a CONSUMER oriented electrical communication device in the 21st Century? I use a cellphone, GPS receiver, cordless phones, computers, TV, VCR (I can actually set it too :)), High-end Home Stereo remote, FRS devices, CB radio, Palm Pilot , RC cars and boats and even a microwave oven and I don't need a damn license for those. What makes HAM gear soooo complicated I need to pass a test and be TAXED on it by the FCC?

By the way Jim who the hell are you gonna MORSE with? Aliens, Russian SPY ships, the Space Shuttle, clandestine operatives so deep under cover that they can't afford voice transmission equipment (poor bastards). So, who the HELL do you Morse too in the 21st century??? MORSE is DEAD. dot dot dot dash dash dash dot dot blah blah blah HA HA HA :) :) :) You guys kill me.

Man you guys crack me up get with the times folks your HAM hobby is as OBSOLETE as my VIC-20 and C-64 are to 1Ghz CPU's. Let the FCC use the space for something more useful, at least more interesting. Hell I'd buy a GMRS unit once the FCC re-allocates frequencies, manufactures mass produce (a la FRS), drop the price and licensing bullshit. I can see a uses for a 5-10 mile communication device on UHF, FRS is neat but limited. Technology WILL not stand still for long, I would love said GMRS with built in GPS, terrain mapping database, hell throw a cellphone , scanner, personal organizer and MP3 in there too, sell for $300.00 - 500.00 sweet. The future looks good to me at least.

If you inferred that from my post then I apologise - that was not my
intention. Rather, it was to set the record straight..

Please follow me through this. Let's be sure we have right model.
The T490 series is labelled MINIPHONE on the front panel and uses a
"pushbutton-thumbwheel" for channel select. The T490's came with the
module I described, which presents 16 bits of info in parallel to the
synthesiser chip. The module sits atop a pair of rows of molex pins
in a T formation on the lower (non-hinged) board.

There is nothing stopping a person with determination (and preferably
one channel) from setting up the required data via a diode array.
Maybe that is what has happened to yours.

The T500 ("plastic fantastic" - before the yacht) was a two-channel
plastic clamshell case with two pushbuttons on the front F1 and F2 to
select from the two channels. These used diode matrices for data.
early units used leaded components, later I saw use of SMT diodes.
Solder bridges were used to select 1 or 0 for each diode (bit).

Can you confirm which radio you have and we can possibly help you some
more.

Peter

Well, if you spent a little time learning about ham radio, you would
be able to answer your own question. For one thing, unlike the other
electronic devices you described, ham radio gives you the capability to
broadcast on multiple radio bands, using considerable output power, and
using several different operating modes. A computer, home stereo, tv,
cell phone, CB radio, or other similar devices, do not have any of those capabilities.

> Man you guys crack me up get with
> the times folks your HAM hobby is as
> OBSOLETE as my VIC-20 and C-64 are
> to 1Ghz CPU's. <snip>

There is a greater demand for radio, and ham radio, today then there
has ever been. The list of devices using radio, and agencies using
radio, has grown considerably, and will continue to grow in the future.
Therefore, the need for people with at least basic radio skills is also growing.

Yaesu FT-50R with the following for sale. Must sell due to health problem.

Unit in 10/10 condition
Includes:

FT-50R with FTT-12 Voice recorder keypad
1 - 9.6V NiCd, great shape with clip
1 - 6V NiCd, great shape w/ clip
Standard charger
Original box, manual and schematics
ADMS-1E software and programming cable
Stock antenna
Leather belt case with quick remove belt loop

A great system, I'd love to keep but need the money. Unit has been MARS/CAP modded. Asking $300 plus shipping. Click on below link for photo

http://www.bv.net/~mcguyver/ft50r.JPG

E-mail me with any further questions

678,000, give or take a few.

Let's do some really crude estimates. Let's say the "average" ham
"career" lasts 50 years, and that almost all hams keep their licenses
till they pass away. (Note the word "average"). Then we can expect 2%
of the ARS to expire per year, or 0.167% per month. 0.167% of 678,000
is about 1132 per month.

> Or did you just mean ARRL members? That number still sounds
> too low.

Correct! Assuming 1 in 4 US hams is an ARRL member, we get 283 per
month.
>
> OTOH, if hams only die at the rate of 55/month we could promote
> amateur radio just on its health benefits. :-)
>
Yup!

One thing I've not seen yet is a breakdown of ARS licensees by age, and
comparisons with the US population as a whole. We see single number
"average age" stats, but they are meaningless without more detail. And

a correction factor must be included to allow for the fact that there are few hams under the age of about 10.

73 de Jim, N2EY (age 46, licensed since age 13, very much alive and kicking)

> > The question asked time and again is, "Why are there no *young* newcomers
> to
> > ham radio?" The answer is quite simple: elitism.

Elitism may be only a part of it. The largest so called generation "gap" occurred during the 60s when the youth of the USA took on a new culture that was opposed to the Viet Nam war and opposed to a lot of the conservative thinking of the older generation who fought in WW2. The result was the development of rebellous anti-government youth who sometimes went as far as becoming part of the druggie scene. Their rationalization for their anti-social behavior was based at least in part by their discovery of government hypocracy such as the Watergate affair. Hams have (inspite of some bigoted wizards) always represented a conservative group which is patriotic and loyal to our government. This has led to the continuation of what started as a "generation gap". IMHO that gap is getting bigger as time goes on. The gap is recognizable in the types of music and sadistic entertainmemt that polarizes the young vs the old culture. Unfortunately Ham Radio is seen, even by many Hams, as a part of the OLD CULTURE. This in itself makes it very hard to sell to the younger generation. on the other hand the freedom of speech that we see on the internet and even in this NG is not typical of trasditional Ham Radio content. Most Hams do not want to discuss sex, religion or politics over the air. (These subjects are taboo since Ham Radio content must be G rated)...BUT some will in NGs. This leaves Ham Radio a dry and sterile field as far as most youths are concerned. In short it offers no exciting surprises as far as its content goes.

people
> > involved.

IMHO Hams who are technically innovative do have some qualities to
feel "elite" about...just as hacker gurus may. If Hams can feel that
Ham Radio has some bragging value then there can be no motive for most
people to become Hams.
> "I don't practice what I preach because I'm not the kind of person I'm
> preaching to." - J. R. "Bob" Dobbs

A very good quote. It applies to me as well.

> > Second, it annihilates the appeal of the group's philosophy, as no
> > one likes to be talked down to. Third, it turns the group into
general
> > assholes, making them snobby, confrontatinal, and unlikeable.

Yep...You can't talk down to a non-captive audience for long. Captive
audiences include only those in required school classes, court rooms,
military posts and unfortunate enough to be inside of a moving vehicle
where a loquatious speaker is propounding. Peopl;e and especially
youths don't want to be talked down to...even by their own parents.
BUT
IMHO you don't have to talk down or be talked down to to be an ass-hole.
Ass-holeism comes with a much larger field of territory.

> Not true!

Again we see the poster that seeks to analyze society being labelled a Nazi. In my cast I would probably get labled a Leftist for agreeing about the same social conditions.
> > My
> > idea of ham radio would be a wide range of individuals discussing many
> > different topics, and engaging in a meaningful and intelligent exchange of
> > information. (That certainly doesn't happen on the typical DX contact)
I would suggest that you take an IQ test and join Mensa. Then you could talk to intelligent people via Mensan NGs. Unfortunately you might find that these is little difference in the responses that you will get from the Mensans and the folks in this ham policy NG. A lot of smart people don't know how to communicate productively. Humans tend to do things and say things to satisfy their own egos when they are doing things that don't involve a monetary profit motive.. This is basic human nature.
> However,
> > that's asking for a Utopia that just isn't going to happen. Some will even
> say
> > that this is against the fundamental purpose of the service as outlined in

Yep...This is the traditional conservative nature of the hobby and has not changed with the changing American social culture.
> radio has
> > become stagnant.
>
> 97.1 does not prohibit these discussions. But talk about something the
> least bit controversial, and the jammers will pile on. It's not just ham
> radio.
Now you can understand my point of view. I believe that Ham Radio should be primarily a TECHNICAL HOBBY. It has always been accepted that Hams can discuss radio technology, their equipment, antennas, etc. If we go to far in thinking that Hams like CBers and NG posters can be permitted to discuss anything that they feel like we are changing a basic Ham tradition that has set Hams apart from other communications users in the past and IMHO must continue to do so...Not just so Hams can feel elite but so they can learn technology and pioneer in modern innovation which can approach the state of the art.

>Intolerance of other views is on the upswing everywhere. I dare say

AGREED!!!

> Donating an FT-1000 to Unclaimed Mysteries is good first step, IMHO.
>
> > Until a redefining of the basis
> > and purpose

There can never be a basis and purpose to redefine our basis and
purpose. If you analyze which paragraphs need to be changed you can
only see an elimination of those very paragraphs with nothing real to
replace them...and thus an end to what are defined as the very basic
values of Ham Radio.

> happens, and until the poisonous elitism is purged, the appeal

You can do that using the December 1996 data, but the FCC hasn't been collecting or publishing birth dates since that time so a breakdown by age of the current ham population isn't readily available.

Doc: I have been off of 313 for close to
a Year. Business in Pacific Northwest.
This is news. Fill us in, did Herb the Turd
finally depart from this mortal coil, or is this
just another "urban legend rumor" started by
the "orange farmer" who hires illegal mexicans?
This smells fishy. On the other hand, if KV4FZ
did finally drop dead, please confirm with a
URL or other source. I will then rush out and
purchase 2 or 3 bottles of Monet Champagine
and celebate on the boat big time this weekend.
I used to be active on Intercon and I cannot
tell you what a royal pain-in-the-ass Herb is/was.
He QRM'ed me on 20 occasions as I can
recall, the stinking SOB. Please say it is true!
I don't have HF and cannot hear the scuttlebutt.

Mr. Rosen

You misunderstand the Type Certification of the Amateur Radios.
The Type Certification only pertains to the receiver and it's
radiation of various frequencies against FCC Part 15 rules.

Nothing is done to test other functions of the amateur transceiver.
Nor is the transmitter actually tested beyond the manufacturers own
certification the product meets FCC Part 97 rules. One exception is
an HF power amplifier as it must comply not being able to operate on
24 to 28 MHz when sold new in the US. HF transceivers so long as
their receivers operate below 30 MHz carry NO Type Certification
number at all and are not tested by a FCC testing facility..

Go to www.fcc.gov/oet and look up your radios type acceptance number.
You can enter in the first 3 letters or the whole number.
You will most likely find it Type Certified as a scanning receiver.
According to the FCC database an FCC examiner will have no clue that
product transmits. I have fielded many of those calls at my work
place where the FCC engineer did not understand that "scanning
receiver" actually transmitted.

Remember the Amateur Operator is solely responsible for proper and
legal station operation regardless of the capabilities of the product
he is using.

Crossbanding is QUITE legal. NOTHING illegal about it in the US.

What can be illegal is how it is USED.

Hello Mr. Rosen,
It's intelligent speculation on my part and being that not one of his sycophants has replied, neither a squeak nor a faint utterance of contradiction, I feel I'm on the right track.
Seems like a gigantic coverup. No Herbie on the air. No mention of him by his cronies. No final crackdown by the FCC. No nothing. It's as if he just drifted away, planned, calculated and carried out by the BARFnits.
I only wish the band had been better to allow identification of that voice saying he died on May 26th. I'm neither imagining nor fabricating and the statement never would have been made as a joke.
Furthermore it's turning out that three persons of very high esteem on the V.I. cannot confirm FZ's passing because of no obit. I say even if he did die, his family would squelch any publication of such because of his miserable reputation in general.
It's a most interesting situation and the truth will indeed surface. Some of us are great enough with computers to cull any piece of info, period.

Gary,
Not saying you're wrong, I don't have all the facts, but, if the FCC only tests emissions for type acceptance, then why is Kenwood having problems getting it's new Sky Command radio system type-accepted. As I understand it, from what I've read, it has to do with the way the radio(s) implement remote-control/cross-band operations. Not an emissions problem, an operations problem.

110. HF coax connector problem

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-02 00:00:00 UTC
From: technocrat <jbohanejrNOjbSPAM@juno.com.invalid>
Message-ID: <15fa2cb4.27a73e44@usw-ex0104-031.remarq.com>
Source record: 109857

Hello to the group,

I just purchased a Kenwood TS-450S/AT, and I am noticing a problem with the feedline connection. I am using the rig for RX only right now, and I notice that when the center conductor of the feedline pl-259 makes contact with the female counterpart, signals accross all bands come in fine. However, if I push the plug in all the way, _or_ if the threaded shield ring makes contact with its counterpart, all signals are severely attenuated.

In the AM broadcast portion of the receiver, for example, all signals disappear except one extremely strong station whose transmitter site is only 1/2 mile from me, and that signal is very attenuated.

Is this simply a matter of a faulty female connector on the rig? I have tried two different antennas, both using the standard pl-259 connector, and one very long piece of coax using the same connector. The same problem occurs regardless of which setup I use.

Any help appreciated!

John KA1HIC jbohanejr@Juno.com

Kurpfuscher does indeed mean "Quack" as in poor medical practice. Proof
that AF2Y engaged in such activities, must be pure speculation, imho.

> The question asked time and again is, "Why are there no *young*
newcomers to
> ham radio?"

But there ARE young newcomers to ham radio. A few weeks ago, a bunch of local hams had dinner together to plan for FD, and among us was an 11 year old Tech. I'm also well acquainted with a local Extra who is 14, and has several years' experience. And they are just the ones I know well.

> The answer is quite simple: elitism.

The question is flawed.

What rules would it violate? Obviously some things are off limits, but
not all.

> These people can't even see past a rulebook to see that amateur radio
has
> become stagnant.

Not to me!

> But, no. The majority of hams today are old and/or obese, white, males

Let's hold it right there a moment. First off, you're making a broad
generalization without any data being presented.

"old" - well, I'm 46. To a teenager, I'm old. To an octagenarian, I'm
young. How old are YOU? And why does age matter so much? How old does a
person have to be in order to be "old"?

"obese" - Most American adults are overweight, according to various
studies. Obese is defined as being more than a certain percentage
overweight (I can't recall the exact number offhand). Why should a
person's value be tied to their body mass index, as you seem to be
doing?

btw, I go 215 right now, at 6' 3". That's too heavy - I'm working
towards 180.

> who have
> nothing better to do than talk about the "good 'ol days", their

health
> problems, and the weather.

Not the hams I know. All sorts of great stuff on the local repeaters
and the CW bands.
>
> Based on these facts, you can see that the new license structure
isn't going to
> save ham radio.

Except that your "facts" turn out to be false, or irrelevant.

> A lower code test requirement isn't going to save ham radio.

So we should have left it alone? I don't think so! At least 75% of
commenters to the NPRM favored the 5 wpm General license.

> Only a change of attitude will save ham radio.

"Save" it from what?

>Until a redefining of the basis
> and purpose happens,

How's that going to happen?

> and until the poisonous elitism is purged, the appeal of
> the internet for the free and open exchange of ideas will continue to
grow, and
> interest in ham radio will continue to dwindle until it is like the
dead
> languages of Europe: Still there for the curious, but of no common
use.

Sorry, Tom, but the facts speak otherwise.

For one thing, if you look at the history of ham radio (at least in the
USA), you'll see that it has grown rapidly in some eras and slowly or
not at all in others. Rapid growth before and immediately after WW1 -
slow growth in the 1920s - a veritable explosion in the early '30s
(almost triple the number of hams in less than 5 years) - slow growth
through the rest of the '30s, then a decline during WW2.

Fast growth from the ned of WW2 to 1963, then no growth for almost a
decade. Steady growth from the early '70s to the late '80s, then very
slow growth since then.

US license figures: (approximate)
19K hams in 1929
46K hams in 1935
60K hams in 1946
100K hams in 1951
250K hams in 1963
350K hams in 1979

550K hams in 1990
678K hams in 2000

What downward trend?

John,
No, it isn't a problem with the TS-450s/at. It's a
common occurance with radios and feedlines/antennas. What
is happening is that when only the center pin is in contact
with the antenna jack on the radio, it is acting like a
random length wire antenna. About the same thing happens
if you just touch the antenna jack with your finger.
I would tend to think there is no problem as such, but
maybe the antenna isn't 'tuned', or suitable for the frequency
your listening to.

That's OK. We're all safe now.

Gore, the inventor of DNA, is going to save everbody
and everything. He is the "responsible world leader"
that they will contact. All other world leaders over
history's time, have paled in comparison to Gore's
blinding intellect.

In fact, Gore invented intellect. He's really a time
and space travelling superior being who was the original
mastermind behind life itself.

That's why he can claim all of his inventions. He invented
everything long before they were "invented" here on Earth.

He communicates to the chosen ones like Edison, Bell, Ericsson,
etc. via invisible mind-melding waves to "seed" these
"inventor's" minds with His Knowledge.

Ask Doc. He knows about this too.

Thanks Doc for the resonse.

This is probably the case as I am not using tuned antennas.
I have no HF antenna, so I am using various mag mounts or just
plain coax terminated on both ends with pl259s.

All these antenna arrangements offer excellent reception unless
plugged all the way in.

I am glad to hear that the problem is probably not with the
connector on the rig!

thanks again,

John

> You forgot one. alt.radio.family (Family Radio Service)

Rick, nothing was forgotten; the alt.radio hierarchy contains at least thirty subgroups, but they're not part of the rec.radio hierarchy. Alt(ernative) NGs can be created on a whim by anyone (and because of that, many ISPs won't carry them), while the rec(reational) NGs are created only after a rather long formal process (Proposal, Call For Discussion, Call For Votes, vote tallying by an independent vote counter, approval by the newsgroup creation committee who then will finally send out a control message asking ISPs worldwide to add the newly approved NG to their news collections). The recreational groups are created only after going through close scrutiny at many levels, including the Usenet readers (who approve or disapprove of the newly proposed group with their votes).

Can they handle it? There's so much to learn:

In our one-hundred year history, only a small percentage of each generation has shown an interest in the self-learning of electronic theory, soldering, reading and understanding schematics, collecting components, assembling radios, national and international radio laws, ionospheric propagation and antenna theory, assembling antennas, and communicating world-wide by RF emissions. It's very specialized; it was never an Everyman's hobby. That we have 670,000 licensees attempting to abide by our fundamental purpose (Title 47 CFR 97.1) is in itself amazing.

I have been going off and on since 1968 when I was in Jr High.

Observations:

The flea Market was only about 80% filled by Friday afternoon.
Sunday at opening time more vendors were leaving the Flea Market than people coming in.
Inside on both days no one knocked me over due to crowded conditions.
Hamvention Offical had to make a Sunday Annoucement at 0900 reminding inside vendor they were contracted to stay until close.
Heard a lot more complaining about every aspect from more people both days.
Especially, the bus situation.

Speaking of eBay,

My experience has been more the seller beware than the buyer. eBay always takes sides with the buyer and there are a lot of bait and switch buyers on eBay. I had one individual buy a piece of radio equipment and complian to eBay that it was not was advertised. The piece he tried to pawn off did not even have the same serial number nor date code as mine. eBay still sided with him sending menacing emails of the legal consqences. Did not give nor did the guy go to the Postal Inspectors as promised.

Boycott eBay and visit local smaller less commerical hamfests!

> That was not the original argument you made to me, Jeff.

That's because I was responding to someone else's comment. That was
obvious, but you deleted his comments and are making it look as if
I was responding to you.

>You placed
>my ham radio callsign next to your name in this radio newsgroup and then
>challenged me to cite a law or regulation that was broken.

The call W5NET is your station's callsign, not "yours." I covered this
in another article; your station is W5NET, and you're its control
operator. Outside of radio communications, the letters and number
combination W5NET, has no meaning, official or unofficial. It is not
your identity. Someone else using it outside of radio communications
has not stolen your identity.

>And I clearly did that in another posting to this thread.

No you didn't. W5NET does not identify you, it identifies an amateur
radio station in which you are the control operator. As long as you
remain in control, you can let anyone else use Station W5NET.

> In that message, I made the argument that you cannot, by law, use any
>"means of identification" that belongs to me as a means to identify
>yourself. That is identity theft, which is covered in the Identity
>Theft and Assumption Deterrence Act of 1998 (a copy is posted elsewhere
>in this thread).

None of which applied to the station callsign W5NET outside of radio communications. Specifically, on Internet, anyone can use the letters and number combination W5NET.

> You are correct when you say that the specific letters and numbers in >my callsign do not belong to me, so they can appear anywhere. However, >as a "means of identification," especially as it relates to radio, that >callsign belongs to me and you are not free to use it as a means to >identify yourself.

On the air, that callsign identifies a station of which anyone could be operating, as long as you remain in control; off the air, you are wrong. Saying "my callsign" takes you down the wrong path -- it's a station callsign of which you're the control operator. *You* are *not* W5NET. The only reason your name appears with that callsign in the FCC's data base is due to you being the control operator of Station W5NET.

Now, what might be interesting is for you to do a history search to see who previously had Station W5NET.

Jeff (control operator of station KH6O)

> That is not the original argument you made to me, Jeff.

It certainly is. You're under the false impression that W5NET
identifies you; it doesn't -- it identifies a radio station of
which you are the control operator. Outside of radio communications,
anyone else could use that combination of letters and number; I
could again place it after my name here on Usenet and no law or
regulation would be broken since we're not on the air here.

> You placed my
>ham radio callsign next to your name in the signature area of a message
>that was posted in this radio newsgroup and then challenged me to cite a
>law or regulation that was broken.

You error again in calling it your callsign; you have no call -- only
a radio station (of which you're the designated control operator)
has that callsign.

> And I clearly did that.

No you didn't. W5NET is not your identity, it is a station's identity;
anyone can operate that station using that callsign as long as you're
the control operator.

> You cannot, by law, use any "means of identification" that belongs to
>me as a means to identify yourself.

You again error in believing that a callsign identifies you; it
only identifies a station of which you're the designated control
operator.

> That is identity theft, which is
>covered in the Identity Theft and Assumption Deterrence Act of 1998.

You're confusing a station callsign with your SS#.

>.... However, as a "means of identification," especially as it
>relates to radio, that callsign belongs to me and you are not free to
>use it as a means to identify yourself.

You need to peruse 47 CFR 97 and understand the difference between
a station license and an operator license.

> By the way, you are also not free to use that callsign (those letters
>and number) in any environment outside radio as a "means of
>identification" if you do so in a manner that leads someone to believe
>that you are me.

I could very well apply for a vanity license plate or a web site
using the combination of letters and number W5NET. Outside of radio
communications, that's a random combination of letters and a number.

> That is also identity theft - no different than using
>my SSN, driver's license number, or any other "means of identification,"
>to lead someone into believing you are me.

Here you again are in error -- a callsign does not identify a person,
only a station, and only on the air.

Jeff (control operator of Station KH6O)

Surprisingly, no he's not. Again, his callsign only identifies a radio station of which he's the control operator -- it does not identify him. As long as he remains in control, anyone can operate Station W5NET. W5NET is not a person -- it's a radio station in the ARS.

Recall that we're issued a station license and an operator license; the callsign only identifies the station (of which we're the control operator).

That's because it took that long for the license to arrive in the
mail after passing the exams! (Back then, one couldn't get on
the air until the postman delivered the license.)

Not all plug wires are created equal!

Check out

http://www.magnecor.com/magnecor1/Index.htm

There are many other ones available specializing minimizing
interference and they aren't the ones available for $10-$20
at your local auto parts store!

Connect two clip leads to the batteries. Connect one clip lead to a
rusty file. Drag the other clip lead over the file in Morse Code
sequence. <grin>

I've heard C.W. transmitters that sounded like they were built that way.

I run Magnecore in my 87' Suburban with 454 and HEI ignitiion. They did not eliminate the noise all together but they got rid of probably 80% of it. I'm very pleased! Highly recommend their product. Buy them direct as above, go to their webpage....

Cecil....

I'm betting you are a good guy, but I'm also betting that you are baiting me.

If you are an EE, and you don't know how to build a spark-gap transmitter, then I'm sure that I'm not the one you need to be talking to.

See my response to Glen for starters.

Also, remember that in my first post in this topic, and in those posts following the first, I am communicating with someone who relies on the understanding and promise of performance from others rather than on his own technical 'understanding of the concepts' himself.

Again, this is not a question of legality or of polite, logical discuurse. To me, it is a matter of practicality....there are those who "CAN" when it comes to radio wave communication, and those who "CAN'T".

Those who "CAN" are those who understand the art of amateur radio (or, those who understand the technical essence of radio telecommunications in general, for those who like to split hairs), and those who "CAN'T", meaning those who rely on others to provide them communication services, and who have NO idea of how to arrange the same service for themselves should their enablers fail at the task of serving them.

In a nutshell, I am considering those who "talk out of their butts" against those who have the technical saavy to be "CAN DO" operators.

Discussions along any lines other than these are based on a failure to understand my point of departure, and a failure to understand the difference between a technically saavy ham and the qualifications of the intended recipient of my first post.

Basically, discussions along any other lines than these betrays that the dissenting poster didn't understand the difference between the original poster's comments and my response to those comments.

Regards!

JB

This may be a "duplicate post" of sorts in response to Glen, but
I posted one and did not see it appear. Sorry to have taken
uptoo much space if it (eventually) did appear.

In basics, Glen seems to have the point, or at least he has
responded accordingly, and seems to understand what I am trying
to say.

Best Regards!!

JB

Well, I know how to do that Glen, but that has nothing
to do with making a spark-gap transmitter out of a
transistor radio.

Oh, I know exactly how to build a spark-gap transmitter
just not out of a transistor radio as you said you do.
Exactly what parts in the transistor radio do you use
for the spark-gap transmitter?

Amateur radio will last far into this millenium.
Granted there are more and more and different forms of two way radio coming
on the market now and then, amateur radio does have many facets that the
others don't have. For those, of you who are amateurs I need not tell you
the difference.

VK - don't know if there are any other regs that effect us in that regard, but I am reasonably careful in my use of the system in such a fashion, about the only reg that I can remember dealing with identifying transmissions states that we have to ID our TX at least once every 10 minutes. There seems to be a little bit of uncertainty as to the legality of crossbanding but a lot of people still do it. As long as you don't interfere with another service or other users then I cannot see any problems with crossbanding. I would welcome an opinion from a Radio Inspector on this question - as far as I can see it is not illegal to do it in VK land but then again there could always be some little regulation that makes it illegal. The main use I have for doing this sort of system is mainly for safety purposes, i.e. if I am bitten by a snake or break a limb when I am out hunting or walking then I would prefer to have such a system in place.

Cheers

Matt

fr.rec.radio.amateur,aus.radio.amateur.misc,uk.radio.amateur,rec.radio.cb,rec.radio.amateur.misc,nl.radio.amateur

The t496 has a board mounted on a t shape connection. To see the diodes i had to lift the board off the connection and turn it over. The diodes are marked from N0 to N9, A0 to A5 and there is two banks of them seperated by the t connection in the middle of the board.
Recently i was faced with the problem of programming a t500 with a diode matrex 2 channel setup. That one was easy because i had the info and program that showed me how to set up the diodes. The costomer went away with a smile. In and out in 1 hour. Love it when a plan comes together.
I have seen a t496 with a eprom setup for 99 channels but mine has only a 10 channel selecter. (one thumb wheel) I would like another thumb wheel as well.
Thank you Chris for your comment. Yes you are right, i should look into at least attemping to alter freqs through trial and error. The only problem with this is i don't own a freq counter that goes that high. I will however do as you suggest if and when i have to or can do.
Thank you jeffrey for your comment. I will attempt to see if the supplier will come to the party with a info sheet.

Of course i would like a state of the art radio for use on ham bands. Unfortunatly being a luxury, radios are not part of the budget. If i told my missus how much i spent on my hobby so far she would have a kitten. I have been very good and repaired most of what i have at a very low cost. Partners will never understand. There are still a lot of good radios out there that are maybe old but still very good for the purposes i need them for.

cheers Mike vk4vzk

Mike
I guess you're lucky - of all the 10- and 100-channel units I've
seen and serviced over a decade or more, I haven't seen the diode
array on these.

Looking into my prog software for the 490's, I can tell you that:

N9=409.6 MHz
N8= 204.8 MHZ etc down to
N0= 800kHz
and
A5=400kHz down to
A0=12.5kHz

Which line is which I can't readily tell because I only see this as
EPROM data and the pinout info in the service manual is useless here.

I suggest you try and get data on the PLL chip - Motorola MC 145152.
that will tell you which line is which.

A private chat room with a ham, now that is exciting.
More exciting than talking to the finast woman in the world.

Please visit my World Wide Web Site, you have never seen a page like it. You
will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics
Amateur call South Dennis, Ma. (Cape Cod)

Most likely there is a short for the braid t the center conductor some place
along the coax.
90% of this type of symptoms are right at the coax connector, where a strand
of shield make contact the center conductor.

Try replacing the coax connector especially if it is the solder on type.
Remember too much heat on the braid shield will melt the center conductors
insulation and cause a similar problem.

Well excccccuse me for being soooo dumb!

Just after several decades of observations and having been a flea market vendor, this year it seemed to be large percentage than usual. I also noted several large flea market vendor whom I have dealt with over the years did not attend for the first time in 10 years.

But I forgot this is the internet where personal opinions must tempered by considering everyone's point of view and framed up to politically corrected to accommodate everyone else on the net.

Next year I will collect evidence in the form of tallies, statements from vendor / patrons, etc. to present a more concise and formal report. I will form a fact finding committee to explore this situation, and issue position paper to congress after 2001 Hamvention, after all a national Icon might be in jeopardy! Application for the committe will soon be on-line at www.who_could_careless.org/applicationsforcommittee/hamvention/form.html

Shucks, dAFf2Y Docduck, the rest of us knew that, all along. You're truly gifted in mastering the obvious.

For your next laboratory lesson in 'net technical operations obvious to the least-experienced of observers, you may figure out why it took you so long to get these results (remember, you thought I was posting anonymously), and report the obvious back to us in triplicate one more time.

About yogurt: maybe you know a source of unadulterated 'gurt. I formerly got it at the North Avenue Market in Baltimore, in those cute little cone-shaped containers which if enlarged and set on your head, would add a touch of drollery to that corner you occupy and stool you sit on.

Cross-band repeat (listen on 2 meters and cross-band transmit on some band higher I.E. 220, 440 900 Mhz) is permitted. One example was given where the user was listening on 440 and cross-band transmitting on 2 meters. The rules in the U.S. do not permit that.

When all else fails, contact the frequency coordinator for your area. They will be glad to help.

dAFf2Y duckdoc, your threadbare, ersatz Don Rickles schtick *and* your political analyses are much more akin to the first four letters of the word 'analyses', than all eight letters. That's your problem -- you anal eyes everything cuz of your dark-brown outlook.

This rram reflector, I suppose, is the best gig you and your agent could land for your feeble attempts. Re-read Sid Caesar, Milton Berle, Mort Sahl, Henny Youngman, et al., for better and more contemporary material. Vegas awaits you.

Maybe Mr. Hope's writers could help you out -- which way did you come in?

I await the 'gurt arrival. Maybe you can deliver it to Brielle in September.

Yours for drivel punctuated by arcana, minutiae, trivia, and esoterica.

Why bother? Just think of the net as a big baseball game, and you're the
umpire. As you know, umpires simply call them as they see them, and there's
plenty of Earl Weavers and Billy Martins to argue your call.

LAK, welcome to rrap. It looks like you're heading in the right direction.

Please be sure that your founding members are elected, even though there are no member to elect them. I know it sounds a little crazy, but that is how things are done here.

You also need to have a constitution and by-laws. Post your membership roster, including names, soc. security numbers, and bank routing numbers so that we may verify actual membership data.

Also, be sure to indicate each member's operating preference, so that if they should claim to be a DXer we may tear them down and stomp on their heads and kick them in the ribs and other vital places. No claim of being a DXer is too small to be overlooked.

Furthermore, we will need a break out of age groups within your committee so as to see if hams really are mostly octagenerians. Be sure to publish something so that we can say you're only interested in the book store aspect of your organization. Lack of a financial report will immediately be met by claims of you running off with the money.

Finally, it is vitally important to determine if your committee members use CW "rarely or never," or "always."

Ooops, almost forgot - two on the group will need sexual preference information. I know, I know, but they really seem to thrive on it.

>

Hello? McFly?

In case you HAVEN'T noticed, this country IS falling.

From WITHIN.

Liberals, with their lack of moral fiber now have kids shooting
teachers. NO personal responsiblity; it's the BLAME GAME. Who can we
blame for the kid shooting the teacher. Certainly not the kid, it
MUST BE THE GUNS!

Or maybe he saw other people on TV with stuff, and he felt he was OWED
whatever he saw. You know, the RIGHT to a big screen TV, the RIGHT to
have lots of other stuff. It's in the Constitution, you know.

America, the land of the handout; America, the land of "it's someone
else's fault. I'm not responsible for my actions."

My way is not to shoot everybody. My way is to allow personal defense.

MILLIONS of handguns and other weapons are NOT used in crimes. But if
lemmings like you see ONE gun death on TV, you go ape-sh*t. Forget that
hundreds of other Americans died the same day. We're just concerned with
the sensationalized ones. Get rid of guns, and the problem goes away.
Yeah, right. In Disneyland!

If your theory is right, how come the MILLIONS of weapons that have BEEN
out there for decades aren't being used the way you CRY out? You have NO
evidence, just blind fear that other lemmings like yourself will hold on
to with a death-grip because you're too freaking ignorant to see the
reality.

Kurpfuscher, right? But you want to dictate how to run the free world?

Congratuf*ckyoulations, AF2Y. YOU are what's "doing us in".

Best is airplane ignition cable but it costs.
Poor man's way: wrap each with number 18 stranded 1 turn
per inch and ground all at distributor. Use plastic ties.
No need to ground at plugs.
Reduces S7-8 to S1. YMMV
Also get 12 inch strap from NAPA and ground engine to frame.

I have recently installed a VHF preamplifier from Microset, an italian brand. I have experienced a valuable performance in preamplifiying the signal on RX, but the behaviour of my SWR meter changed in a strange way: when I go on TX, let's say with 10 watts, the power stays at this level for just one or two seconds, then it drops to 7 watts. I do not know if it's a matter with SWRmeter getting crazy about the presence of the preamplifier or what... the other thing i noticed is that I am getting a considerably higher SWR than I usually did without preamplifier. I'd like to know from any VHF preamp gurus about similar experiences... thanks in advance.

Your pulling a bad joke right Lloyd? Kurpfuscher's hero a slum lord? Well makes no difference, birds of a feather flock together.
Now for the jamming of the libnet last night, I don't think Doc has a 75 meter antenna Lloyd. Although he could have put one up I guess. My sources indicate, and I can't say what or who, that it seems to be coming from PA, but I can't think of anyone around there that would want to. Especially with the choice of music used. Yuk.

Sure it does, Cecil. You pull out the ferrite antenna
in the radio and unwrap the windings. Use it for the
file scrape thing.

Glen...Do you recommend Farnsworth or straight
timing for good file work...;-)

New Hams, you can help too!!!!!!!! Read on!

The Murgas ARC will once again be operational for the ARRL June VHF contest. We are at the confluence of Luzerne, Columbia, and Sullivan counties in Northeast Pennsylvania(FN11uh.) We will work you, just yell! The contest runs from 2PM Sat June 10 through 11PM Sunday June 11(eastern.) We will be running 6m, 2m, 222, and 432/440. All modes.

FM- 2m FM will be done hourly starting on 146.49 and moving to the other standard freq's. This will begin a couple hours after the test starts. FM will be left on continuously on the other bands, however the ops sometimes do not pay attention as well as they should.

If you work us on one band please ask for a schedule for another. All stations are interconnected and you will instantly be met on another band. You may also do this if you are unable to secure an answer from us on FM.

I do not know what everyone has done, but SUBSTANTIAL improvements have been made to the 432 and 440 FM stations. If you have been unable to get a contact in the past now is your chance. We do QSL.

With any HT you can work us from a realistic range. It is not uncommon to work HT's with ducks at a distance of 200 miles! We do have directional antennas, though, so patience may be required. We regularly watch crystal clear TV from the other side of the state.

All you need for an exchange is a callsign and a grid square. If you do not know your square go here: http://www.arrl.org/locate/grid.html

There will be an AIRSHOW at the local airport during contest weekend. If you have an HT a contact would be appreciated.

For the most part advance schedules are not accepted. However if you are seriously interested in doing something unique you may contact me no later than Wednesday evening Jun 7 and I will forward your email to the right person. Send it to jss167@yahoo.com

Our club website: http://www.qsl.net/k3ytl/k3ytl/index.htm

Thanks. All contacts are greatly appreciated.

> at the wrong times, but ... a little help?

Go to the JPL repeater list (http://rptrlist.w6jpl.ampr.org) and look. 6m repeaters are listed. 900MHz and 1200MHz aren't listed yet, but some of the larger clubs will probably detail those systems on their own pages.

As for the nets, the list itself doesn't have one, but many of the repeaters and/or their sponsors do have web pages/sites for their repeaters, some of which are linked to the list (click on the sponsor if hyperlinked).

As for which are "active," you'll just have to listen more.

For 2m and 125cm, the respective frequency coordinators also list [coordinated] repeaters on their web sites (www.qsl.net/tasma, and www.220sma.org respectively). Digital users should check the bandplans at www.qsl.net/scdcc.

> What's the procedure and costs of getting vehicle license plates
> with my ham callsign, in California?

There's a one time fee ($29 when I did it - but I've heard it's now $21), and a 4 month wait while the DMV in Sacramento verifies the call with the FCC then prints the plate.

There's a special form for application. When you go and the DMV person doesn't know how to input the request into the computer, tell him/her to look in the manual +/-3 pages from plates for members of [U.S.] Congress and Diplomats (for plates other than issued by the State Dept.).

tlbryant@my-deja.com (T.L. Bryant) wrote:
> The question asked time and again is, "Why are there no *young*
newcomers to
> ham radio?" The answer is quite simple: elitism.

Not really. Elitism is a condition of survey for a "scientific" group.
The only problem is to find a GOOD FILTER to maintain the highest level
in the group.
Unfortunately, CW was/is not a good filter to do that for ham-radio. We
can verify this daily. I will show 2 examples in the french ham
community with the last messages of F5TCI and F5RMX : These are 2 hams
that have passed the CW test and have a HF class license and regularly
they post scientific nonsenses in fr.rec.radio.amateur. Recently, the
first one said that radio waves were like acoustic waves and the
propagation in the air, from the antenna, was done by a "pressure wave".
The seond one (who is president of a ham-radio club in France) talked
recently about the "atomic mass of a hard disk" (you can verify this,
the messages are still in the newsgroup).
I'm sure you can find equal examples in your ham community ...

May be CW was good for military purposes in the first half of the 20th
century but it was a great mistake to select people on it for ham-radio.
The solution was to select people on their scientific knowledge.
Ham-radio is NOT designed for communications (this a paradox) but for
experiments. So the only qualified people to do scientific experiments
are scientific people with scientific degrees.

When I speak of experiments, I do not speak of buying a rig and a G5RV
antenna at AES then connecting a key and begin to invade the HF bands
with stupid DIT DAH. For me, that is CB too.

Making QSOs in CW (DX or not DX) is not useful for the knowledge of
radio-electricity. Even at 100 WPM you will be not enough clever to play
with differential equations and able to talk about the last developments
of science in a QSO, or doing service maintenance in your new 756 PRO.

Now it's a bit too late to "adjust the shot" on ham-radio. The hobby has
been invaded by CBers and is not very attractive to young people.

Recently, someone asked me in the news what I was doing in the
university where I teach Physics, to get new hams among the students.
The problem is that no student is interested to learn CW. Scientific
people do not like obsolet languages. It will be like someone told me "I
know how to program in COBOL". Glad for you but you are 30 years late !

CBers or scientific people, you have made the choice : Happy CB on HF !

If the pre-amplifier is a "in-line" type, or if you had to add coaxial
jumpers or vary the length in some manner then you may indeed have
created a impedeance bump in your system. Check ALL connectors,
especially for good shield to connector ground. These get loose quite
a lot. Also if the pre-amp is switched with a relay sort of system,
check that the relay is clean and making good contact.

Try varying the length of your added coax (if you added any).

No it wasn't Walter Miller "High Life", I'm certain of that.
I heard some of the insinuations that it was Doc but that's all they were, insinuations. Hell they've insinuated, at one time or another, that every ham out there has jammed them. which may or may not be true. LOL One thing for sure, the jammer did a number on 'em and I'm reasonably certain it was somewhere in PA, although another night could prove productive, doc doesn't seem to be the one unless he flew south.

What's stopping his tenants from fixing their own toilet? Renters
trash a unit then accuse the owner of being a slumlord. They're
getting a heck of a bargain -- $400/mo for a four bedroom home.
That would barely cover a studio apartment in Honolulu!

Actually Jeff is correct. ACCording to the Veteran's association, 1000
veterans ARE dying per day. There is currently a bill before the house
to increase the lands needed by the national cemeteries to accommodate
those that wish to be interred there. just about every newspaper ran the
same article(s)

Tax Protester ==> someone who tries to make the case that there is no
legal requirement for individuals to pay taxes to the government. See

also: futile and/or lost causes.

As for voluntary taxation - while you have the "option" to ignore the Federal and State tax authorities for a while, you will eventually have to answer for this anti-social behavior. If that constitutes a "voluntary" system, then so be it. I say that tax avoidance is anti-social, since without some form of revenue pooling, all public works and infrastructure would cease to exist and we would all live in anarchy.

Perhaps your professorially-pointy head *has* taken a leap too far.

Tax *avoidance* is legal. Period. End of sentence. The tax system is termed 'voluntary' by the government. Ask any tax professional. The gov't will accept any amount of over-contribution you wish to donate, and put a gun in your ribs if you withhold your 'voluntary contribution'. Ask any tax-protester.

I suppose that you still believe that SocSecurity is funded, and that the government pays half of *that* contribution.

RTFPost. Stay on-point. No where is *any* of that stuff to which you leaped below, advocated.

Politics today seems to consist mainly of the argument over which social experiments and pork barrels get underwritten by the full faith and credit of the US taxpayer. I plan continuing indefinitely my participation in that argument cuz it's my revenue the pols are pooling.

Just how *did* you leap from Weaver's wrongful-death settlement to:

SNIP

"Voluntary Contributions...!" I love it. A message from/for the tax-protester-live-on-your-own-in-the-woods-survivalist theology?

Drunk Criss, regular on 3865, took over 3901 Sunday night and kicked ass. Vietnam Dan couldn't take the pressure and so he left with his band of malcontents. Criss took the boys of 3901 to task and did it well. We wish Criss well since he advised that he would be back every night until the slime of 01 was run off.

Well, I guess I was pretty much on point to have stirred up such a reaction! The reason for my original comment was the reference to taxes as "voluntary contributions from the rest of us" in the previous post. I recognized this as fringe-element "code" for taxation, and it always amuses me to see how people can rationalize away things that they don't agree with or don't like. I don't like to pay 39.5% of my earnings to the Feds each year and another big chunk to NYS, but that's how the system works - and I live within the system. I know that a number of people maintain strong views about the legalities of taxation in general, or they espouse alternate concepts of US "citizenship", but these views haven't held up in court. Don't you think that if there were a real lega precendent for the ligitimacy of tax avoidance, the IRS would be a ghost town on April 15?

In answer to your other question, I'm not sure what will happen to Social Security when the time comes for me to be a recipient - that's why there are things like 403b and 401k plans...

I emailed tait. They must have thought it was a joke. I haven't heard from them. Oh well I guess they have much more important emails to contend with. I didn't think I would get a reply anyway.
Thanks for the info. I will give it a try this weekend. This should be fun. Can't wait to see if it works. I have been trying to set it up already but I haven't been able to get it to work on the freqs I wanted......

cheers Mike

239. Is The Millionaire Next Door WB2OTK ?????

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-04 00:00:00 UTC
From: hammer007 <hammer007@my-deja.com>
Message-ID: <8hc7t9$8vl$1@nnrp1.deja.com>
Source record: 109707

This poses a great question, could the shoplifter be a millionaire ????? I have thought about this for a period of time and I have concluded that the millionaire next door is not WB2OTK. Most millionaires would not be driving a "porkmobile" and if OTK had 3.6 million back in 1993 he would have surely turned that into about 6.9 million by now with the Nasdaq. So why would a man of such means be running around town in a 1993 "PORKMOBILE"

Will that suffice?

> I have attended these events since 1980 where I carried a regular
banner Virgin Islands Statehood Now! If you go to the libary and look
up the first issue of Newsweek after the GOP Convention there is a
double truck spread with Candidate Ronald Reagan and George Bush at the
podium during the demostration that followed his address. Clearly in
the center of the photo you will see my sign. During the 1988 convention
I wore a round Dole sticker on my forehead and the pool camera picked
that up for most of the networks. The pool cameras are constantly
viewing the delegates close up and while speeches are taking place,
during the frequent applause breaks, the close up crowd shots are used
as fill.

There maybe an easier way to prove my existence, just call me on 14.313
or chat with me on Firetalk.

From that same book, the car most driven by self-made millionaires
was a used Ford truck. These folks were able to save a million-plus
by being thrifty (and working hard).

That same "circuit" was in one of Radio Shack's Engineering Notebook
series (a collection of booklets for electronics beginners).

Let's not forget that spark (Class B emission) wasn't banned until
1 January 1966 as per the 1959 Geneva International Radio Conference.

>Care to describe how to do it?

I suppose you could use the wire from the ferrite loop antenna to
make a step-up transformer; you'll need to construct an "interrupter"
and place it in series with the primary so the battery voltage is
pulsed. Use some metal from the radio's frame to make two opposing
electrodes -- they're in series with the transformer's secondary.
It can be made frequency-agile by making a tuning circuit from the
the 365 pF variable cap and one or more of the inductors. It will
be as broad as a barn door -- some stages of filtering can be
added using components from the transistor radio.

A "clean" spark transmitter was discussed in detail on the GlowBugs
email list some time ago.

Got to go watch for the NASA satellite observatory's re-entry --
it's supposed to crash into the Pacific within the next half-hour;
six tons of it is supposed to survive the re-entry.

I can only apologise if you thought I was having a dig. These radios do the job more than adequately. I still think the best HF SSB rigs tx wise are the old ft102 and ts 830 which are getting on to 20 years old. But as Budgie made the comment the ham fraternety want to think this stuff is the bees knees. If you can get one for 2 metres try the Midland or AWA rigs the programmeable types. 50 w output nice radios.

My comments where more meant to be directed at things like ACA not allowing linking of repeaters for years, we are supposed to be at the forefront of technology and linking of repeaters etc has really only come into it's own in the last 5 years. Even the ridiculous requirement that your transmissions are not allowed to be retransmitted on a band your not licensed to use. Most other countries requirements are that if you transmit on the band that you are entitled then what ever happens to your signal through links etc is not your problem. For example the blind eye turned to Limited licences using satellites prior to the 10m enhancement.

I could get side tracked here but thats my thoughts

Bob,
You MISREAD me. I never said that FZ died-I was speculating on it and simply asked if anyone could prove me wrong. My conjecture was based not only on his absence from the the bands but the complete lack of discussion about him. If he's alive, he's alive. If not, I'm wrong and as Rhett Butler said to Scarlett "Personally I don't give a damn."
He's going to the G.O.P. Convention to back Keyes. That's good because Herbie always backed losers since he is one. He might as well wave placards in favor of Thomas Dewey for all the good Keye's supporting is going to accomplish.
Besides, Al Gore, in the debates, will make George W. look dumber than he already is and the people will see that he's better off in Austin but then again who the hell wants to be in Austin? Devil's Island is a better choice.

Herbie,
You're all bent out of shape and very jealous that I was able to
successfully retire from active practice in May of 1989 while you're still
struggling to make a buck at age 60. It must really grate on your nerves
that I was able to do it plus the fact that I never had a kid in jail.

For your edification if you should happen to know the meaning of that word,
in New Jersey my present valid license states RETIRED, a word you'll never
experience. I say you'll be scrounging through dumpsters for the rest of
your life. To become ACTIVE in the dental profession in this state, one
simply must take a number of hours of postgrad studies which I don't need
because I don't need to become active in the profession after 10 years of
retirement. It's called SUCCESSFUL WHEN I HAD TO BE.

Thirdly I would expect that such a "brilliant" man as you would know how to
spell a ninth grade word like "INCOMPETENT." But then again if you were
brilliant you never would have been caught, tried, convicted and labeled a
felon. right?

Radiosigs-Guy

Was that you jamming The Great Liberty Net last night? While there was no direct accusation, much mention was made of one "Dr. Hate-Ler" (sp?) and New Jersey.

Net control stated with some apparent technical authority that the jamming signal was coming from "the east coast". This rules out Indiana, New Mexico, Nevada and (whew ! !) Tennessee. It also serves to alleviate suspicion on "that personage from Florida". And I doubt that the retiree from Alabama has ... nahhh. That would require a 5 WPM code test.

The spotlight isn't yet focused on you, Radiosigs-Guy, but it's narrowing down rapidly. You might want to speak up and vindicate yourself. As Barney Fife would say, "Nip it. Nip it. Nip it in the bud".

Just checking.

Ummmm ... Curt, isn't our tax system voluntary?

Curt, does one become a tax protester by being voluble about use of taxes to do things of which one disapproves? For example, I hew to the *traditional* Catholic teaching on abortion.

Curt, does one become a tax protester by being voluble about what one perceives as mis-use of taxes, eg, throwing money at sports stadia rather than fixing up dilapidated school buildings, roads, and holding sessions of the police academy?

Perhaps your professorially-pointy head has taken a leap too far.

Web Crawling on eBay Banned

In an act that could trigger a maelstrom of lawsuits, eBay has legally tightened its control over how information on its site is used and viewed by other sites. A US federal judge has issued a preliminary injunction barring Bidder's Edge from crawling eBay for auction information. Bidder's Edge, an auction portal, crawls over 170 auction sites and aggregates the results to facilitate item searches, auction watches, and item notifications. Despite some analysis to the contrary, eBay has successfully argued that such meta-searches either slow or potentially slow its Web site operations. The decision finds that Bidder's Edge is trespassing on eBay's private property. Bidder's Edge responds that it will, of course, appeal. CNet has more.

Dan, I was listening on 3950 saturday evening and I can tell you that the jamming signal was more likely coming from Clifton,N.J. than anywhere else. Don't be so quick to implicate Vince, it certainly is a possibility, but a very low probability factor. The culprit from Clifton has had numerous run in-'s with the FCC and where there is so much smoke there is probably fire. Hope you are doing well, Hammer007.

Hi All,

Thanks for reading this. I don't like having to post messages like this, but I'm at the point of no return.....

as some of you read in here, I picked up a Kenwood TS-950SDX Used, I also upgraded to General Class.

Well, I also picked up a Van Gordon Shorty All Bander for 10-160 Meters. and some new coax for my Antron-99 10 Meter antenna. and a nice MFJ tuner.

Now for the reason I posted this..... I need some help putting up my antennas. and I want to put them up this coming Saturday. and I'm wondering, is there anyone in the Southeastern Michigan Area that reads this NG that would be willing to help me put my Van gordon together and help me and a freind (if he even shows) put up my antennas. I already know how I'm gonna do it, I just need a brave soul to climb, as I cannot, very scared of heights.

Anyhow, if you can help me, PLEASE e-mail me at the address listed above and I'll give you my phone number and we can set this up...

thanks...

Chuck,

See if there is a club in your area, or put out a call for help on
your local repeaters. I'll bet that if you offer hotdogs and beer,
you'll get a good turnout!

GET USED TO IT: in the US, tax avoidance is legal, and tax evasion is not.

Your attempt to demonize avoidance is transparent.

Read it and ... whatever:

Judicial Doctrines Relevant To Tax Fraud Schemes
The following judicial doctrines have been developed by the courts to analyze the economic substance of a transaction and then determine its tax consequences.

Tax Evasion vs. Tax Avoidance
Unfortunately, the terms "tax evasion" and "tax avoidance" are often used interchangeably.

Tax evasion involves fraudulent or criminal behavior, conduct involving deception, concealment, or destruction of records.

Tax avoidance generally denotes non-criminal modes of conduct by the taxpayer which minimize or avoid tax liability, but that he is prepared to disclose fully to the IRS. If a transaction does not establish a tax liability in the first place, the taxpayer's motive to avoid tax is irrelevant.

The classic description of tax avoidance was written by Judge Learned Hand in Helvering v. Gregory, 69 F. 2d 809, 810 (2nd Cir, 1934), aff'd 293 U.S. 465 (1935).

[A] transaction, otherwise within an exception of the tax law, does not lose its immunity, because it is actuated by a desire to avoid, or, if one choose, to evade, taxation. Any one may so arrange his affairs that his taxes shall be as low as possible; he is not bound to choose that pattern which will best pay the Treasury; here is not even a patriotic duty to increase one's taxes.

In contrast, tax evasion occurs when the taxpayer fraudulently or criminally avoids the payment of taxes otherwise due and owing under the tax laws. There are many tax crimes under the Internal Revenue Code. In that regard, in Spies v. U.S. 317 U.S. 492, 497 (1943) the Supreme Court observed:

.singly or in combination [in income tax crimes] were calculated [by Congress] to induce prompt and forthright fulfillment of every duty under the income tax law and to provide a penalty suitable to every degree of

delinquency.

The criminal violations cover the same territory as the civil fraud penalties, although the government has a higher burden of proof in the criminal cases. The criminal cases, however, reach a far greater spectrum of potential defendants. Unlike the civil penalties which target only the taxpayer, the criminal penalties reach anyone engaging in the defined offense, including employees, accountants, lawyers and tax preparers. For example, in Tinkoff v. U.S., 86 F. 2d 868 (7th Cir., 1936), an accountant who prepared fraudulent returns for clients was convicted of tax evasion.

Under IRC Sec. 7206(2), a person is guilty of a crime if he willfully:

aids or assists in or procures, counsels, or advises the preparation or presentation . of a return, affidavit, claim or other document, which is fraudulent or is false as to any material matter, whether or not such falsity or fraud is with the knowledge or consent of the person authorized or required to present such return, affidavit, claim or documents.

Substance Over Form
In applying the income tax laws, with few exceptions, the substance of the transaction, rather than its form, determines the tax consequences. U.S. v. Phellis, 257 U.S. 156, 168 (1921); Weinert's Est. v. CIR, 294 F. 2d 750, 755 (5th Cir. 1961).

The "form" of a transaction is generally the label the parties attach to their arrangement; for instance, they might call an arrangement a compensation agreement, a loan, a lease or a sale. There might be documents that support the form, but the courts are not concerned with these labels or documents that purport to govern the transaction - the courts focus on the substance of the transaction, regardless of the labels used by the parties.

According to Bittker and Lokken, Federal Taxation of Income, Estates and Gifts, 2 Ed. (Hereafter "Bittker and Lokken"), the substance over form analysis is often used to dissect transactions between related parties, including loans to family members and transactions between related corporations and their shareholders:

The substance-over-form doctrine is invoked by the government with greatest success with respect to transactions between related persons, since in these circumstances the form used often has minimal, if any non-tax consequences and is often chosen solely to reduce taxes. Id. at 4-36.

Loans to members of the lender's family are also grist for the substance-over form mill.The same can be said of loans by controlling shareholders to their own corporations and, conversely, of loans by their corporations to them, especially if the advances are proportionate to stock ownership. Id. at 4-37.

Transactions between parent and subsidiary corporations and among other members of an affiliated corporate group provide another set of tempting targets for legislative, administrative, and judicial marksmen armed with the substance-over-form weapon. Id. at 4-37.

Related party transactions provide fertile territory for self-dealing and the form of the transaction is often secondary to achieving a tax result. In contrast, arm's length transactions with independent third parties are far less vulnerable to substance over form attack. Independent third parties usually express their transaction in writing and are concerned about the non-tax ramifications of the transactions; consequently, the form of the transaction usually embodies the actual substance as well.

Sham Transactions
The sham transaction concept embodies two separate theories:

A sham in fact - which is a fictional transaction that never actually occurred.
A sham in substance is a transaction that actually occurred but which lacked the substance the form allegedly represented. Kirchman v. Cm, 862 F. 2d 1486 (11th Cir, 1989).
A sham in substance occurs when the taxpayer draws up papers to characterize a transaction contrary to the objective economic realities and which have no economic significance beyond the expected tax benefits. Falsetti v. Cm, 85, TC 332 (1985).

A transaction is considered a sham in substance if it effects no real change in each party's economic position. For example, a sale that fails to transfer beneficial ownership of property - in which the payments circulate among various parties in ways that cancel themselves out - would be considered a sham in substance.

In Rice's Toyota World, Inc. v. Cm. 752 F. 2d 89, 91 (4th Cir, 1985), the Court of Appeals described the sham-in-substance rule as follows:

To treat a transaction as a sham, the court must find that the taxpayer was motivated by no business purpose other than obtaining tax benefits in entering the transaction, and that the transaction has no economic substance because no reasonable possibility of profits exists.

In Jacobson v. CM, 915 F. 2d 832 (2nd Cir, 1990), the Court of Appeals confirmed the Tax Court's description of the sham transaction doctrine:

The Tax Court summarized the sham doctrine as follows:

Transactions that are entered into solely for the purpose of obtaining tax benefits and that are without economic substance are considered shams for Federal income tax purposes and purported indebtedness associated therewith will not be recognized.. [A] sham transaction [is] a transaction that is lacking in objective economic reality and that has no economic significance beyond expected tax benefits.

In deciding whether transactions lack economic substance, we consider such factors as the lack of arm's-length negotiations, inflated purchase prices, the structure of the financing of the transactions, and the degree of adherence to contractual terms.

Business Purpose
Courts will not recognize a transaction that lacks any business or corporate purpose, but is a mere device for dodging the taxpayer's taxes. Helvering v. Gregory, 69 F. 2d 809, 811 (2d Cir. 1934); Gregory v. Helvering, 293 U.S. 465, 469 (1935); CIR v. Transport Trading & Terminal Corp., 176 F. 2d 570, 572 (2d Cir. 1949), cert. Denied, 338 U.S. 955 (1950).

In Helvering v Gregory, the taxpayer, a sole shareholder, wanted to receive marketable securities from her corporation, but a direct distribution would have constituted a dividend (taxed as ordinary income) to her.

The taxpayer formed another corporation, transferred the marketable securities to the new corporation, then promptly liquidated the new corporation, receiving the marketable securities in the process as a liquidating distribution of property from the newly-formed corporation (thus receiving favorable capital gains treatment on the liquidation). The transaction literally conformed to the liquidating distribution provisions of the tax code. In other words, instead of receiving a dividend of marketable securities from her original corporation, she received the same securities tax-free by forming a second corporation, transferring the securities to that corporation, then liquidating the second corporation.

The Supreme Court decided that the transaction lacked any business purpose and violated the tax laws, notwithstanding the fact that it literally complied with the liquidation provisions:

Putting aside . the question of motive in respect of taxation altogether, and fixing the character of the proceeding by what actually occurred, what do we find? Simply an operation having no business or corporate purpose - a mere device which put on the form of a corporate reorganization as a disguise for concealing its real character, and the sole object and accomplishment of which was the consummation of the preconceived plan, not to reorganize a business or any part of a business, but to transfer a parcel of corporate shares to the petitioner [taxpayer].

Judge Learned Hand, in Cm v. Transport Trading & Terminal Corp., 176 F. 2d 570, 572 (2nd Cir, 1949), cert. denied, 338 U.S. 955 (1950) summarized the business purpose doctrine as follows:

The doctrine of Gregory v. Helvering . means that in construing words of a tax statute which describes commercial or industrial transactions we are to understand them to refer to transactions entered upon for commercial or industrial purposes and not to include transactions entered upon for no other motive but to escape taxation.

Step Transactions
The step transaction doctrine, especially pronounced in the corporate-shareholder area, requires that interrelated steps of a transaction may be analyzed as a whole if they in substance are interdependent and focused on a particular end result. Bittker and Lokken at 4-47 states the rule as follows:

If the parties have agreed to a series of steps, no one of which will be legally effective unless all are consummated, application of the doctrine is ordinarily assured.

In Manhattan Bldg. Co. v. CIR, 27 TC 1032, 1042 (1957), citing American Bantam Car Co. v. CIR, 11 TC 397 (1948), aff'd per curium,, 177 F. 2d 513 (3d Cir. 1949), cert. denied, 339 U.S. 920 (1950), the court stated the step transaction doctrine as follows:

The test is, were the steps taken so interdependent that the legal relations created by one transaction would have been fruitless without a completion of the series?

The Supreme Court, in Minnesota Tea Co. v. Helvering, 302 U.S. 609, 613 (1938), observed that:

A given result at the end of a straight path is not made a different result because reached by following a devious path.

When the step transaction doctrine is used to eliminate transitory steps, it overlaps with the business purpose doctrine (the step is disregarded because lacking in business purpose) and the substance-over-form principle (the step is disregarded as a formality that obscures the substance of the transaction).

Assignment of Income Doctrine
The "assignment of income" doctrine states that income is taxed to the one who earns it - a taxpayer cannot avoid tax by assigning his income to another party or entity. Gross income derived from property must be included in the income of the person who beneficially owns it. Blair v. Cm., 300 U.S. 5 (1937); Lucas v. Earl, 281 U.S. 111 (1930). The assignment of income doctrine is judicial in its origin and adds to IRC Sec. 61 (the definition of gross income) an implicit requirement that gross income must be included in the return of the appropriate taxpayer.

A corporation is acting as an agent of its shareholder when a taxpayer's income is assigned to the corporation, unless the corporation conducts substantial business activities. Cm v. State-Adams Corp, 283 F. 2d 395 (2nd Cir, 1960), cert denied, 365 U.S. 844 (1961). In Parish-Watson & Co. v. Cm, 2 BTA 851 (1925), the court held that income from property held by a corporation as agent of its sole shareholder was included in the shareholder

's gross income.

This doctrine becomes relevant when a taxpayer attempts to deflect income to another entity, such as by assigning an installment obligation or compensation earned by him, to his wholly-owned corporation.

Distribution to Shareholders and Constructive Dividends
The courts have often found a constructive dividend when a corporation transfers money or other property, without an expectation of reimbursement, to or for the benefit of one or more of its shareholders, and the transaction is not characterized or reported as a dividend. The transfer must be made with respect to the corporation's stock. It is not necessary that either the corporation or the shareholder intend a dividend distribution for constructive dividend treatment to result. Crosby v. U.S., 496 F. 2d 1384 (5th Cir, 1974). Actually, in almost every case, the constructive dividend was improperly characterized as a loan, business expense or consideration for the purchase of an asset.

The basic inquiry regarding the true nature of the corporate transfer is whether there is an actual loan, business expense or asset purchase to support the transfer to the shareholder. A transfer to a shareholder from the corporation for a purpose other than to satisfy its corporate obligations or to acquire a corporate asset is usually a dividend. For example, in King's Court Mobile Home v. Cm, 98 TC 511 (1992) funds diverted by the shareholder were constructive dividends, not wages, when the transfer was characterized as wages long after the diversion occurred and there was no evidence that the purported compensation was reasonable in amount.

To be characterized as a constructive dividend, the distribution or transfer by the corporation must also primarily benefit the shareholder. Loftin & Woodward v. U.S., 577 F. 2d 1206 (5th Cir. 1978). The benefit may be conveyed through a distribution by a corporation to a third party for the benefit of a shareholder, to satisfy the shareholder's purpose, or through a distribution of corporate earnings or assets for the private purpose of the shareholder. Dean v. Cm, 57 TC 32 (1971); Sparks Nugget, Inc. v. Cm, TC Memo 1970-74, affirmed, 458 F. 2d 631 (9th Cir, 1972).

In cases where there are distributions to the controlling shareholder, the IRS usually issues a Notice of Deficiency, treating the distributions as constructive dividends. Given the IRS's presumption of correctness in most cases, the burden of proof usually falls to the taxpayer to show by a preponderance of the evidence that the distribution was made in connection with a valid corporate purpose.

Under IRC Sec. 301 (c) (3) and 316 (a), dividends are taxable to the shareholders as ordinary income to the extent of the earnings and profits of the corporation, and any amount received in excess is considered as a nontaxable return of capital to the shareholder's basis in the stock. Any amount received in excess of the corporation's earnings and profits and the

shareholder's basis in his stock is considered gain from the sale or exchange of property (usually capital gain). Truesdell v. CM, 89 TC 1280 (1987).

In DiZenzo v. Cm, 348 F. 2d 122, 127 (2nd Cir, 1965), reversing in part and remanding TC Memo 1964-121, the court held that the burden of proof is generally on "taxpayers to establish that the corporation did NOT have earnings and profits equal to the funds diverted" with respect to deficiencies (emphasis in original). Taxpayers must then establish that the corporation did not have earnings or profits; otherwise, distributions to shareholders will be considered dividends and taxed as ordinary income. DeLeo v. CM, 96 TC 42 (1991).

In U.S. v. Mews, 91-1 U.S.TC Para. 50,044 (7th Cir, 1991), Judge Richard Posner summarized the law regarding constructive dividends:

By "constructive dividend" the law means simply a corporate disbursement that is a dividend in the contemplation of law though not called such by the corporation making the disbursement. Every disbursement that is not an expenditure for the corporation's benefit - that is not a purchase, a loan . the repayment of a debt, an ordinary and necessary business expense, etc. - must be a dividend, for if it does not benefit the corporation it must benefit the shareholders. It need not be paid to the shareholders any more than it need be called a dividend. Just as you cannot escape income tax by assigning the right to receive your income to somebody else . so a shareholder cannot, by directing his corporation to pay to X rather than to himself what corporation law deems a dividend to him, avoid having to report it as income.

In Mews, the court found that intercorporate transfers:

.were not disbursements made in pursuit of corporate goals or opportunities or pursuant to corporate duties. So they had to be dividends. The fact that Mews [the taxpayer], the one and only shareholder, did not put the monies in his pocket but instead had them paid directly to a legal fiction [another corporation] wholly owned by himself did not change their character as dividends.

Statutory Powers and Certain Reporting Requirements
Section 482 - Allocations Between Related Parties
Under IRC Sec. 482, the IRS may reallocate income, deductions, allowances, or credits among two or more U.S. or foreign businesses that are controlled or owned by the same interests. The term "controlled" includes direct or indirect control, whether or not legally enforceable and however exercisable. Commonly controlled taxpayers include parents and their subsidiaries that are ultimately controlled by the same interests as well as brother-sister corporations directly controlled by their parent. Control can be found in the family setting when a child runs a company, but his parent is the one in actual control, since the definition of control is not limited

to legally enforceable control.

IRC Sec. 482 places a controlled taxpayer in an equal position with an uncontrolled taxpayer, by determining the true taxable income from the property and business of a controlled taxpayer. It uses the standard of an uncontrolled taxpayer dealing at arm's length with another uncontrolled taxpayer. Those who command a group of controlled taxpayers are assumed to have complete power to cause each taxpayer to reflect the actual taxable income from its property and business.

If an individual taxpayer and a controlled corporation are recognized as separate entities, Reg. §1.482-1(i)(2) states that the individual's employment for compensation constitutes a separate trade or business from the employer company. In such cases, the IRS has the power to make reallocations without obtaining proof of a tax-avoidance motive on the taxpayer's part.

The IRS's authority to determine true taxable income extends to any case in which the taxable income of a controlled taxpayer is different than it would have been if the taxpayer had been dealing at arm's length with an uncontrolled taxpayer (Reg. §1.482-1(f)(1)). The IRS need not show an intent to evade or avoid taxes.

Reporting Requirements for Foreign Corporations
Under IRC Sec. 6038A and 6038C, foreign corporations which are engaged in a trade or business in the U.S. must file annual information returns, listing any 25% foreign shareholders. This requirement includes any direct 25% foreign shareholders and ultimate indirect 25% foreign shareholders, such as individual shareholders. The form used to report this information is Form 5472.

Revenue Procedure 91-55, 1991-2 CB 784 illustrates the reporting requirements for a direct 25% foreign shareholder and an ultimate indirect 25% foreign shareholder. In the example, two individuals own 100% of a Swiss holding company (Sh 1 owns 80% and Sh 2 owns 20%). The Swiss corporation owns 100% of an Italian corporation which, in turn, owns 100% of a U.S. corporation. Both the Italian corporation and Sh 1 must be identified on the Form 5472 since the Italian corporation is a direct 25% foreign shareholder and Sh1 is the ultimate indirect 25% shareholder.

Reasonable Compensation
Even if there was some compensation for services involved, any payments over the amount considered "reasonable compensation" under IRC Sec. 162(a) would have been treated as a constructive dividend. The regulations state that reasonable compensation is made with reference to the fair market value of similar services performed. IRC Reg. 1.162-7(a) states:

(a) There may be included among the ordinary and necessary expenses paid or incurred in carrying on any trade or business a reasonable allowance for salaries or other compensation for personal services actually rendered. The test of deductibility in the case of compensation payments is whether they are reasonable and are in fact payments purely for services. [emphasis added]

IRC Reg. 1.162-2(a)(3) states:

(3) In any event the allowance for the compensation paid may not exceed what is reasonable under all the circumstances. It is, in general, just to assume that reasonable and true compensation is only such amount as would ordinarily be paid for like services by like enterprises under like circumstances. The circumstances to be taken into consideration are those existing at the date when the contract for services was made, not those existing at the date when the contract is questioned. [emphasis added]

Compensation for Services Outside the U.S.
IRC Sec. 862(a)(3) states that compensation for personal services performed outside the U.S. by a non-resident alien is foreign-source income and is not taxable by the U.S. IRC Sec. 862(a)(3), however, has never been applied to allow a non-resident shareholder of a U.S. corporation to bail-out corporate earnings through a compensation agreement. The typical case under this section permits foreign employees (who are not owners of their companies) who work part of the year in the U.S. to exclude the work performed outside the country.

In P. Stemkowski, 82-2 USTC Para. 9589 (2nd Cir, 1982) the court apportioned the salary of a Canadian hockey player, who worked under a one-year contract with a club located in the United States, to sources within and without the United States on the basis of the number of days in the regular season of play plus the number of days spent in training camp and the number of days spent in the playoffs. In Stemkowski, taxpayer worked for a U.S. company and had no control over the number of days he worked in the U.S. and Canada. Also, Stemkowski did not involve the payment of earnings from a corporation he controlled, it was a straight employment situation.

Under IRC Sec. 864(b), a taxpayer who performs personal services at any time within the U.S. is engaged in a trade or business in the U.S. IRC Reg. 1.864-2(a). The income generated from these services is generally treated as income effectively connected with a trade or business within the U.S. under IRC Sec. 864(c)(2) or IRC Sec 864(c)(6). Thus, a foreign taxpayer engaged in personal services is taxed at regular rates and is entitled to deduct applicable expenses.

Foreign taxpayers do not have to engage in much activity within the U.S. to be considered engaged in a trade or business. In Johansson v. U.S. , 336 F. 2d 809 (5th Cir, 1964), Johansson (formerly world heavy-weight boxing champion) was engaged in a trade or business when he fought in 3 fights over a 2-year period. In Ingram v. Bowers, 57 F. 2d 65 (2nd Cir, 1932), an opera

singer who recorded music in the U.S. was held to be engaged in a trade or business.

Under IRC Sec. 864(c)(3), if a foreign person is engaged in a trade or business at any time during a taxable year, all the foreign person's U.S.-source income is treated as effectively connected with a U.S. trade or business. This would include all payments for compensation received for those personal services which are effectively connected income. IRC Reg. 1.864-4(c)(6)(ii). Also, under the business activities test, such services would be treated as effectively connected income (i.e. the trade or business of performing services in the U.S.), and would be considered a material factor in the realization of that income.

Any gains or losses from the sale or exchange of capital assets which are directly related to the taxpayer's trade or business are considered effectively connected to the trade or business. For example, a transfer of stock in a U.S. corporation to ensure the performance of personal service renders all dividends, gains and losses from that stock as effectively connected income, gain or loss. IRC Reg. 1.864-4(c)(6)(i).

If a taxpayer is engaged in a trade or business at any time during the year, IRC Sec 864(c)(3) applies to treat all U.S.- source income, other than income under IRC Sec. 871(a)(1) (generally, rents, interest, dividends and compensation from non-U.S. sources), portfolio interest and capital gains as effectively connected income, even if the taxpayer realizes the income at a time before he began the business or after he ceased to do business in the U.S.

In WC Johnson, 25 TC 920 (1955), a Canadian citizen and resident was treated as engaged in a U.S. trade or business by virtue of being a partner of a partnership that made an oral agreement with another partnership regarding a U.S. cattle business. Since the Canadian partnership, through its agreement, was engaged in a U.S. trade or business through a fixed place of business, Mr. Johnson, as a partner of the Canadian partnership, was also engaged in a U.S. trade or business.

Treaty Shopping
Persons who are not residents of a foreign country cannot take advantage of that country's tax treaties directly; therefore, taxpayers have formed corporations in the treaty country in an attempt to come within its favorable treaty provisions. This a called "treaty shopping" and is a major concern of the U.S. government, since the most favorable treaty countries encourage taxpayers to form companies within their jurisdictions to avoid taxation. Most of the treaty shopping cases involve "conduit financing," a scheme where a company interposes a corporation in a treaty country with favorable provisions on the taxation of interest payments, then routes the interest payments on loans through the conduit.

The leading case on treaty shopping is Aiken Industries, 56 TC 925 (1971). In Aiken Industries, a U.S. corporation ("U.S. Corp") borrowed money from its Bahamian parent corporation ("Foreign I") and signed several promissory notes. Foreign I then assigned the promissory notes to its newly formed Honduran subsidiary ("Foreign II") which collected the interest on the notes. Foreign II signed identical notes in favor of Foreign I for the assignment of U.S. Corp's note. Foreign II conducted no business other than to collect interest on these notes. There was a double-tax treaty in effect between the U.S. and Honduras, and the U.S. Corp claimed an exemption from withholding on its interest payments under the treaty.

The Tax Court held that the treaty did not apply since the interest payments were not "received by" Foreign II and its role in the transaction could be disregarded. Receipt of funds under the treaty meant more than temporary physical possession; the recipient had to have complete dominion and control over the funds. The court stated that Foreign II lacked any business purpose except to take advantage of a treaty provision and there was a complete matching between the interest income it received and what it paid to Foreign I. Foreign II was merely a collection agent and conduit. Therefore, the funds paid by U.S. Corp were received directly by Foreign I without the intervention of the treaty.

In another treaty shopping case, Johansson v. U.S., 336 F. 2d 809 (5th Cir, 1964), Johansson, a Swedish citizen and former boxing heavy-weight champion, devised a plan to avoid being taxed in the U.S. He allegedly became a resident of Switzerland, formed a Switzerland corporation and then became employed by his Swiss company. He then claimed treaty benefits for commercial travelers under the U.S.-Swiss treaty (certain employees of Swiss corporations in the U.S. for less than 184 days were not taxed under this exception). The court held the tax plan was merely a device to divert personal income on a temporary basis, that Johansson was not really a Swiss resident and that his paper Swiss company did not really hire him as an employee. He was denied the benefits under the Swiss treaty.

In the area of treaty shopping with corporations acting as conduits to obtain favorable tax treatment on the payment of interest, the IRS has issued a series of revenue rulings. In Revenue Ruling 84-152, 1984-2 CB 381, the IRS held that a loan from a Swiss parent corporation to its U.S. subsidiary which was channeled through an Antilles subsidiary was a direct loan from the Swiss parent to the U.S. subsidiary. The Antilles company was disregarded as a mere conduit and the payments it received were not "derived by" it within the context of the Antilles treaty. The IRS stated the primary reason for involving the Antilles corporation was an attempt to receive reduced withholding under the treaty.

In Revenue Ruling 84-153, 1984-2 CB 383, a U.S. corporation formed an Antilles subsidiary which then issued bonds outside the U.S. and lent the proceeds to the U.S. parent. The IRS ruled the Antilles company to be a conduit for financing purposes only, and its primary purpose was to avoid the withholding requirements on interest paid by the U.S. corporation through the Antilles treaty.

Revenue Ruling 87-89, 1987-2 CB 195, held that a foreign corporation from a non-treaty country which deposited funds with a bank located in a treaty jurisdiction that exempted federal income tax on interest payments, which, in turn, lent the funds to the foreign corporation's U.S. subsidiary, was a direct loan from the foreign parent to the U.S. subsidiary. The use of a bank to re-lend the funds was disregarded.

The Tax Court rejected a conduit financing scheme involving a U.S. corporation and its Netherlands Antilles subsidiary in Morgan Pacific Corp, TCM 1995-418 (1995). In this case, the U.S. corporation was required to withhold 30% on payments to its NA subsidiary, which then paid the funds to a foreign corporation. The taxpayer conceded that Aiken Industries applied and that the transfers were not exempt under the treaty, but contended that it merely made bookkeeping entries recorded in its corporate accounts and never actually "paid" interest to the subsidiary.

The taxpayer also claimed the foreign corporation had an equity interest in the taxpayer and the transfers were really non-taxable distributions in respect to stock, rather than payments of interest. The Tax Court rejected both these arguments and held interest was paid directly to the foreign corporation. The taxpayer was charged with negligence and failure to deposit penalties, in addition to the 30% withholding tax.

In 1995, The IRS released the "conduit financing" regulations in their final form under IRC Sec. 7701(l). These regulations are consistent with the prior case law and revenue rulings cited above. Congress indicated its approval of these revenue rulings in the legislative history by stating the rulings "appropriately ignore conduit entities and properly recharacterized the transactions described therein." S Prt 103-37, 103d Cong. 1st Sess 206 (Comm. Print. 1993).

Potential Defenses to Tax Fraud
Mistake or Ignorance of Law
Although "ignorance of the law is not an excuse," ignorance or mistake of law is a defense in support of which a defendant may produce evidence that the defendant lacked the requisite state of mind required in tax crimes. "An actual bona fide misconception of the law, regardless of the presumption that the taxpayer knows the law, will not result in criminal liability." Battjes v. United States, 172 F. 2d 1,4 (6th Cir. 1949). The Model Penal Code provides in Section 2.04: "Ignorance or mistake as to a matter of fact or law is a defense if - (a) the ignorance or mistake negatives the purpose, knowledge, belief, recklessness or negligence required to establish a material element of the offense." While most courts say that the defendant's mistake need not be objectively reasonable, other courts authorize a "willful blindness" instruction that permits the jury to impute knowledge to the defendant if the jury finds, beyond a reasonable doubt, that the defendant deliberately closed his eyes to the obvious. United States v. MacKenzie, 777 F. 2d 811 (2d Cir. 1985).

Reliance on Professional Advice
When a defendant claims good faith reliance on, and a shift of responsibility to, the defendant's counsel or tax adviser, the defense will fail if the defendant has withheld material facts from the adviser. United States v. McCormick. The prosecution need not show that the defendant ordered that the return be falsified. The prosecution's response can be evidence that the defendant (1) was aware of the contents of the return and (2) knew that the reportable income significantly exceeded the amount reported on the return. United States v. Chesson, 933 F. 2d 298 (5th Cir. 1991). Further, to escape tax penalties, a taxpayer must show that the advisor reached his decision independently after being fully apprised of the facts. Leonard v. IRS, 414 F. 2d 749, 750 (5th Cir, 1969).

Full disclosure of the material facts to the adviser is an element of the defense. Therefore, reliance on the advice of the tax adviser will fail as a defense if the defendant has withheld material facts from the adviser. See U.S. v. McCormick, 67 F. 2d 867 (2nd Cir). In U.S. v. Raub, 177 F. 2d 312 (7th Cir, 1949) a taxpayer who failed to supply an accountant with all material information to prepare a return could not use the defense that he relied on his accountant's advice.

For all those having sent E mail, telegrams and telephonograms, I was away in Lexington, MA for the weekend and now must catch up on work. I shall return.
As expected I did receive a very nasty sarcastic E from Windbag Windy Cornball Windisch who insulted me, my wife and two children. In fact it was so despicable my wife cried upon reading it and I will be talking to an FBI agent in West Paterson, NJ about him. The man is menacing and I'm getting uneasy about the situation.
I also got a hateful E-mail from Herbie. seemingly back from the dead. If I were ever naive and stupid enough to believe in anything as ridiculous and childish as the devil, which intrigues so many goyim, he would be Lucifer but then again I think that's his middle name...oops sorry.. I remembered-it's Luther.
Herbie's letter was indeed inflammatory and libelous. If he had any assets aside from bags under his eyes, I'd sue him but that's life.
Nonetheless I wish everyone well on this esteemed board of nitwits and have a good week. May Moses, Jesus and all the saints bestow their blessings on you stinkers...oops... I mean thinkers.

I think he was suggesting that only the battery part of the transistor radio was needed to accomplish the task. If you have set the requirement that each and every part in the transistor radio must be used to make a spark-gap transmitter, you have set a virtually impossible, and certainly impractical, goal. Glen came up with an elegant and simple solution.

Has this devolved into angels dancing on the head of a pin?

Bob,

I am doing reasonably well, thank you for asking, hope you and yours are well also. Now to the discussion at hand. First off I have no intention of helping pointing the finger at anyone. Item one; no one that I know of has a 75 meter beam, or a accurate means of determining bearings on such a low HF band, especially at night with multi-path and skewing.

My input was purly speculative, as are the comments from everyone else on this subject.

If that's what he meant, it was a very poor choice of
batteries. An automotive battery would be much superior.

David,

I have no problem whatsoever with tax sheltering strategies, if that's your definition of "tax avoidance". If your definition of "voluntary" taxation refers to overpayment of taxes beyond one's legal tax liability, then I have no problem with that concept either. My beef is with people who would say "nobody can levy taxes on me, I'm an independent citizen and don't need to pay them since I don't want to be part of the USA (even though I live there)". This has come up on the rec.radio discussion groups in the past, and the original post brought those images to the forefront. If someone chooses to file a 1040EZ when they have a lot of legitimate deductions, then that's the price they pay for the simplicity of using that form. I prefer to use a good tax advisor.

Curt Breneman

You're happy that a little kid is being thrown out of a free country into
one ruled by a commie s.o.b? That tells me you're heartless among other
nasty attributes.
The Yankees? Who beat your Braves in four straight in the '99 WS? WE ARE THE
CHAMPIONS, not you and until my guys are dethroned, then kindly shut up.
Furthermore we have the best relief staff in all of baseball and don't have
to depend on oddball Rocker. He's in trouble again with MLB!
Right now I will admit that the Braves are the best in baseball which means
that in the 2000 World Series, the Yankees will beat them in five games
instead of sweeping like last year.
Also do you have a Lincoln Town Car? That's an auto for the elite. Rich is.
You're not.

That spark-gap transmitter would be legal in a pinch, if the pinch were serious enough to be a bona-fide emergency.

Can you supply some info on any time when a transistor-radio converted to a spark-gap was used in such a pinch? I think that Rick Lindquist would love to have the story for the ARRL Letter.

The frequency spectrum between 7000 kHz and 7100 kHz is allocated to the amateur radio service only according to international regulations on ITU level. As I know, that allocation is valid worldwide, and no other services (e.g. broadcasting stations) shall operate within that band. I remember, that at least until the 80's, 40 meters has been a difficult band, due to many intruders (mainly broadcasting stations).

So, I am concerned about an information, which I have found a few days ago on the webpage of Cumbre DX (http://www.cumbredx.org), a club of shortwave broadcasting listeners:

Cumbre DX Press Release May 15, 2000
by Hans Johnson
Cumbre DX sends parts to Radio Gaalcayo.

Cumbre DX has just sent tubes and other spares to the
Somali station Radio Gaalcayo. The station has been on
since 1993 and the spares were desperately needed to
keep them on the air. Radio Gaalcayo can be heard
daily from 1000-1200 and 1600-1700 UTC on 7012 kHz.

As part of Cumbre DX's on-going efforts to help both DXers
and DX stations, the parts were shipped today and should
reach the station by early next month.

Cumbre DX is eager to partner with other organizations that
are interested in helping small stations. A prime example would
be Radio Miskut in Nicaragua. This station is currently off the air
which means that the country of Nicaragua is no longer on shortwave.
It seems that just a few spares will get both this station and country
back on shortwave. If you are interested, you can reach me at
hansj@worldspy.net

That webpage clearly indicates, that Cumbre DX is giving technical support to a 40 m intruder station, which operates or is going to operate on 7012 kHz.

I have e-mailed my concern about that support to the author of the press release, who is editor-in-chief of the Cumbre DX bulletin, and proposed, that Cumbre DX should contact their partners at the broadcasting station, so that they QSY to a frequency outside the 40 m amateur radio band.

I also informed our national intruder watch coordinator (Ulli, DJ9KR).

Well, I you are concerned about that type of support also, feel free to contact that listeners club yourself...you can find a list of e-mail-adresses of their officials on their homepage mentioned above.

Yes, in fact, it would be legal in a life-saving emergency.
That was sort of my understanding when I suggested it. Even if
it weren't legal, in that type of emergency, who wouldn't do it
if they had to?

About using all of the components in the transistor radio for
the spark gap transmitter, I was of course suggesting that all
of the spare parts be isolated and/or tied to ground <grin>.

Come on Cecil! You're not cutting me any slack. I could go get my "tune in the world with Ham radio" primer to find the answer, but instead I'll just say that I can cause an electromagnetic disturbance just by walking accross my floor and grounding out on a doorknob. If I find a way to do it on demand by recharging my source potential quickly, then by touching two conductors together to effect the discharge, then I am even more efficient.

Remember the (primary)recipient of my original post, and you will see what I was getting at (I think you already see it and now you want to twist me a little bit).

Remember that in my first response post, I didn't mention radiating efficiency/ ERP at all!

In that post I was also careful to mention that I could find a way to generate the power (sorry, EMF potential) if I had only enough wire (and I could, and you could too, so don't ask me how!) A few capacitors in series from the transistor radio to enhance the discharge, and a switch, boy, I'd have the best highly enhanced S.G. transmitter on the block. That's all!

_ _··· ···_ _

JB

p.s. I was thinking of using my own human energy to turn the speaker magnet inside a coil. Can you tell me that , in theory, it wouldn't work?

How are you going to do that with capacitors rated for
ten volts maximum? I'm giving you a hard time about making
a spark-gap transmitter out of a transistor radio which is
manufactured with low voltage parts. If you had said instead
that you could make one out of wire, a file, and a car battery,
I would not have said anything.

Charles, you must have been really bothered by my posting of this issue.
You need go back and proof your type, a man of your self acclaimed Columbia
Univ. education should not make so many mistakes. First of all , if he had so
damn much money then how can you explain all the bad checks and open warrants
for his arrest ? Second, he does not own a home, the place where he lives is
a rental unit owned by Mr. & Mrs. North. I cannot comment on his marriage,
although I was told that there have been some rough times. The old truck
driver, Fred, informed someone of that. His daughter cannot be exiled to
K-Mart. He's not retired, but lazy!!! You are correct on only one point, I am
still making bucks, not as many as I was when the market was good, but I am
doing better than most investors during these trying times. Probably much
better than the investment challenge .

Top 5 creeps responses for a perfect DX-394-B ($140)

KIWA AM filter, Factory SSB scotkey noise blanker patch, external speaker.
Perfect dead on
alignment with, original box, papers and packing

1= I will give you $75 if you COD it to me in San Diego, see my good Ebay
profile makeup.
"Hey $70 plus COD you must be kidding"
Reply:.............Hey is was a new 7 years ago

2=I am a preacher *** will you donate the radio for god's work.

3=I will trade you for a collector quality DX-140.

4=Wanna trade for a Bearcat XLT-60 scanner ?

5=The DX-394 was never a good radio needing many corrections.
Since It does not include new replacement KIWA SSB and CW filters, I am
prepared to
go $90 and split shipping....It would be good for the sitting in the
yard.
Does it have the original whip antenna and what condition is the box and
original packing?
WB2***

After seeing, operating, and listening to the stuff under $200 I am keeping
the radio !

No, the " Occoulter Disk" was created by
Art Bell and Whitley Streiber for use in
predicting global superstorms and ARBITRON
Ratings. ;)

(It's actually nothing more than a device mounted
within the telescope that covers over the body of
the image of the Sun, allowing for an "artificial
eclipse" to be simulaqted, thus producing a rather
good rendition of the Coronasphere. Quite clever!)

Milt.

No, it's a disc mounted in the centre of a telescope to block the image
of the sun and just leave a tiny part of the rim showing. It eliminates
the glare.

But 670.000 for USA is ridiculous ! Your country is 52 times larger than France and we are 18.000. Multiply 18.000 by 52 and see that the density of hams is smaller in USA than in France (where ham-radio is quite dead). In Germany they are about 80.000 !

Is your pre-amp designed for RF bypass? If not, it's probably been
degraded or destroyed by that 10 watts. If it is designed to bypass RF,
is it automatic detection, or does it need a separate voltage lead to
trip a relay?

I'm looking for a computer LITERATE guy or gal to answer this. No wise guy answers, please.
I use a MAC with an OS of 7.5.5. My modem is an external Best Data 56K Smart One v90.
In my drop down menu of modems, I used to use one entitled:
Generic 56K with the proper initialization string, flow control and what not. Suddenly that specific modem is no longer on my menu and although a few are close, I'm having a problem with Free PPP. I chose Rockwell since it uses the same chip as Bast Data and if anyone knows what other modem manufacturers also use the Rockie chip, please advise.
For example, if I'm going to leave the computer for a while. I close the PPP connection to get off line. When I return to the "puter" and open PPP, ostensibly it appears to be open but I can't access e-mail or the Internet.
I called Apple but they wanted FIFTY BUCKS to answer this question and I told them to hit the road. The MindSpring tech advised I get in touch with Apple since he thought the problem was more Apple than MindSpring related.
Knowing the type of geniuses inhabiting this forum, I now turn to youse in supplication.
What say good buddies and a 10/4. I learned to say that thanks to the new Welfare Extras now invading our bands. Three cheers for the FCC and ARRL and my sincere 73 to youse all.

Hi Dan:
I've been using a small backyard Adcock DF with goniometer during some of these 10pm et Sa turd ay night specials. It gets around the nighttime skywave problems handily most of the time, because it is easy to calibrate with signals from known directions. Two or three of us could triangulate some of these interlopers quickly -- in 10 seconds or less using the goniometer method.

Because of the unusual way Howard Hughes lived, his status was subject to discussion. But Herb Schoenbohm has never shown such reclusive patterns. Moreover, looking to the law for guidance, you are required to allege once that you are competent ("sui juris"), then it is understood. What I'm saying is, give Herb the same benefit of the doubt you'd give anyone.

Now, Doc, the commercial transaction on Herb's amplifier. Yes, as you know, we surely did have differences and, for a time, I felt awful about it. With your help sparking me, I posted those feelings. I got a direct response from Herb, who assured me that if I returned the amp, he'll make it better than the amp I bought. I trust the commitment.

Which gets me to another subject: "To err is human, to forgive, divine." I no more would carry an animus toward anyone after the fact than toward my own misconduct, such as it might be. Animosity eats at the possessor, sapping him of his mental and physical strength. Prolificly covered by Shakespeare, animosity has caused many a downfall.

In any case, the amp had nothing to do with my championing Herb's Constitutional causes, because I view them as my causes--and yours.

Herb, I do not subscribe to labelling Doc, Dr. Hate. I believe it is inflammatory, disrespectful and unproductive, hoping you'll stop it. Perceiving injustice doesn't license you to retort in kind. As you know, I have never treated you that way, though I've posted exactly what I've felt. All of us can communicate without throwing barbed wire out front.

Something is wrong with the 52 number (unless it is based on something other
than population). I think the population of France is somewhere around
60,000,000 while the USA has about 280,000,000 people. That is a factor
of less than 5. I think Germany has about 80,000,000 people, which
is a factor of about 3.5.

5 times 18,000 is a lot less than 670,000. 3.5 times 80,000 is also less
than 670,000.

339. Run-a-Round About Getting Licensed

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-06 00:00:00 UTC
From: "Matthew T. Leavy" <leavy@earthlink.net>
Message-ID: <393D7171.1E26754B@earthlink.net>
Source record: 109534

Hi,
I am a man in Florida who is looking to get licensed to operate a Ham radio. I live in Boca Raton. I have been to the FCC Amateur Service Web site and even sent them an email to which they responded. I was told by the FCC to use the ARRL in pursuing my license.

I called the people listed with the League and am still waiting to hear back from them. I tried several different orgs locally and none seem interested in helping a new guy get a license. I really only need a place to take the tests, I have the study materials. I had heard of the spirit of good will that existed between hams and those seeking to be hams, however, it seems to be something that has faded away.

If anyone has any ideas or tips as to how/when/where I can get tested I would like to hear from you.

Pax,
ML

Hi,

Check your local phone book for the nearest ham radio
store (FLA has plenty I'm told) and check their board
for notices of club meetings and test sessions.

You can jump right in and take the test if you like,
but it gets easier when you've got someone to help you
get started. In this hobby you look for an Elmer, an
old-timer (long-term ham, not necessarily old in age!)
who won't mind showing you the ropes, so to speak.

Good luck!

years old,
> I could pick up the telephone and communicate with the kid next door.

Yeah Ed but you didn't study for and pass a Ham test just to talk to
the kid next-door. Like most of us, you had visions of working exotic
DX and maybe getting a chance to talk to some Hams who could tell you
about Radio engineering, who a humble kid would normally never get a
chance to meet if he or she was not a licensed Ham.

> But
> we still got those tin cans and wire and made our tin-can phone and
said
> those famous words, "Can you hear me?"

In Japan the people don't say "Can you hear me?" They say "Mushie
Mushie?". That is the way they say hello on the telephone but they
don't say hello that way when they meet you in person. Like Ham Radio
telephony has its own jargon in Japan....maybe because it has its own
mystique...sort of like old time Ham Radio....Ah so deshka.
>
> When I was 13, I got my Novice. I could pick up the phone and call
Windsor,
> CT at any time, but when I worked WN1DGK in Windsor, I was thrilled.

Yep and that might have been because WN1DGK was a HAM and you felt that
as a Ham you now had something in common with WN1DGK which might not
have been ever recognizeed if both of you were not Hams. Ed, ask
yourself...What was it? Maybe it was the common technical knowledge
that you both might have had because you were Hams.
Heck Ed people who jog might get places faster by automobile...Yet
people jog for health and excercise...BUT if you want to go to
Australia you can't think of jogging there...You get an airline ticket.

In other words once you get into a sport or hobby it needs not be efficient BUT before you can be motivated to join a sport or hobby it has to have something that seems comparatively attractive, exotic or educational because if it does not you won't bother- period. If you live in a world where everyone else is flying you are not as apt to be inclined to go by skate board....that is unless skate boarding makes you feel like you can impress people with your skate boarding skill...If nobody was impressed by skate boarders then the skate boarders would go in for motorcycle racing or bungee jumping which might seem as risky. Ham Radio is not in the risky or athletic class, thus it must be in the techie nerdy class...If it is not seen as a technical feat then it has no class....because it sure can't beat modern popular commercial communication now-a-days.
BTW. I changed the title of this thread to "EXTRA PLUS HAMS".
It is my opinion that all of the presently licensed hams who care to will soon up-grade to Extra Class. The ones who don't - simply don't care and may not be very active Hams anyway. There will then be so few new Hams that eventually there will be nobody applying for anything at the VE sessions. When the ARRL and W5YI realize this delemma they will have to act to keep their VEC operations busy. I am sure that this alone will cause them to want to lobby the FCC to institute at least another class of Ham license. Let me call it EXTRA PLUS. I hope it will contain higher level technology than the present Extra class. If it is in the same Q&A multiple choice format, almost all Extra Hams will be able to up-grade to Extra-Plus.
Sooo after that happens they can make an EXTRA-PLUS-PLUS class and so on ad infinitum. We can only hope that if they continue to do so they won't be doing it just to keep the VE/VEC program active. We can hope that they change their tune and promote Ham Radio as a TECHNICAL HOBBY which needs higher incentives for higher level technical study. Maybe just like Hebrew National hot dogs need to be acceptable to a "higher authority" in order to be kosher...even tho most secular buyers don't care about keeping kosher.

> 73,
> Ed Hare, W1RFI
>
73,
Bob Wex, W2ILP (Incentive License Possibilities?)

IMHO Hams will want to upgrade anytime that
a new higher class of license is created.
IMHO They are very much like Dr. Seuss'
Star-Bellied Sneeches. This is what some
of the posters here call the elitist attitude.

All last weekend, newspapers, CNN, local TV news, and Memorial Day
ceremonies, quoted that 1000-per-day figure. You're too well read
not to have seen it, Dave; were you on vacation?

Let me be more specific, though -- the Friday, May 26th, 2000, issue
of USA Today, page 10A, states that "... World War II veterans are
dying at the rate of more than 1,200 per day, according to the national
VFW headquarters."

The eighteen-year-olds of 1941 are now 77, so that 1,200/day figure should
not be surprising.

Not to sure about the eavesdropping, however I am on my 3rd replacement from
Panasonic (Base has 2 antennas).
It looks tech'ee but what junk.

Low, bad quality speaker audio.
Contently getting zapped or locked up by carpet, local lightning, my
Asteroids arcaid game.
A nightmare to program.
Jams 15 feet from all TV's
Difficult to clear call logs
Lousy ERP power of 30MW
Can be difficult operate if you have big hands.

Rocker is so great and we Yankee fans know it so well that the guy is back
in the Minors because he walked too many and was generally ineffective. Leo
Mazzone said so. His own teammates won't ride in the same bus as he which is
a definite morale booster. He rides with the media.
Zero tolerance for, as you put it, "fags.?" You're as intolerant as your
hero. The intelligent and decent in this area refer to it as "alternative
life styles." Furthermore what do you recommend doing to those people?
Punish them? Incarcerate? Incinerate. Grow up, Bob.

I don't mind a convicted felon calling me Dr.Hate. Leave him alone Bob
because it's cathartic for the guy when he was alive. He took my supposition
about his passing as being grave dancing which it was not. I simply surmised
he was dead and asked for proof to refute it and apparently I was mistaken.
No big deal. If he's alive, he's alive and so be it.
Regarding his willingness to make your amp worthwhile, when I see it I'll
believe it because that's a tough thing for a dead man to do. Oops I
forgot-he's alive or so it seems. This whole thing is getting very confusing
so I'll see you later and I'm sorry I couldn't attend the funeral.

Ed Hare, W1RFI wrote
>Ham radio has never been only about communication.

But for many people *communication* is the main reason that they became hams. The contesters, the 10-10 collectors, the ham club social events, the weather nets, the emergency services, the ragchewers, and on and on. These are the types (like Kim) who have little interest in the electronics part of the hobby. With the advent of the memorization test, and the elimination/easing of the code test, it is easier than ever for these people to become hams, and they have done so in droves. The almost non-existence of homebrew equipment on the bands these days makes this quite obvious...

>When I was 13, I got my Novice. I could pick up the phone and call Windsor,
>CT at any time, but when I worked WN1DGK in Windsor, I was thrilled.

The 13 year old these days can communicate around the world with his computer. He can meet other kids, discuss any subject (not just radio with old fogies), and send video/audio/text/games/ect with like minded kids. And no code to learn or test to memorize. It's no wonder that most of them are just not interested in our *old* hobby...

Do you think your argument would hold up in court? Do you believe
that a copyrighted item made public in one forum is free to be
circulated by anyone in any other forum?

Here's a recent example to share:
Someone was taking Vietnam-related newspaper articles from the Clarinet
News newsgroup (clari.news.asia.southeast) and reposting them to the NG
soc.culture.vietnamese as a public service to the soc readers. Clarinet
found out and threatened to take legal action against the poster. Was
Clarinet bluffing? After all, the poster was only forwarding articles
from one NG to another. Give us your legal opinion.

Ed Hare, W1RFI <w1rfi@arrl.net> wrote:
>That spark-gap transmitter would be legal in a pinch, if the pinch were
>serious enough to be a bona-fide emergency.

At the 1959 Geneva radio conference, the ITU relented to pressure
and permitted continued use of spark but only for emergencies until
January 1, 1966; after that date, spark was to be prohibited even for
distress communications. It might seem drastic to prohibit Class B
emission even for emergencies, but the end effect the world body
desired was to have all such transmitters removed and permanently
retired; they didn't want anyone relying on such a device as a
reserve emergency transmitter. (Even before 1966, incompatibility
was an issue; e.g., an Auto Alarm signal sent by Class B emission
would not activate an Auto Alarm receiver.)

The FCC states that KV4FZ "lacks the requisite character to have his ham
license renewed".
So they are banishing him from the ham bands forever. Yet the FCC has
renewed the ham
licenses of murders, rapists, drug dealers and pedofiles. No problem at
all. Ham exams are
administered to individuals in prisons across the country. Even super
hacker Kevin Mitnick retained his ham license
without a whimper from the FCC. What is so special about KV4FZ that it
required Bill Clinton to
order FCC Commissioner

Date: 2000-06-06 00:00:00 UTC
From: Jim Jerzycke <kq6ea@pacbell.net>
Message-ID: <393D20D3.5F3A64FE@pacbell.net>
Source record: 109604

Four month wait?? I got mine in three weeks. The stickers came first, in about a week, and the plates came about two weeks after that. Did you send a copy of your license?
73, Jim

If Amateur Radio, like CB radio, were limited to low power, like many of
those consumder devices you cite, I might agree.

> What makes HAM gear soooo complicated I need to pass a test and be TAXED
on
> it by the FCC?

First, let's compare the approximate effective radiated power of the devices
you used as examples:

Cell phone: < 10 W
GPS receiver: < 1 mW
Cordless telephone: < 1 W
computer: < 1 mW
TV: <1 mW
Stereo: < 1 mW
VCR: < 1 mW
FRS: < 1 W
CB: ~ 100 W max (ERP)
Palm pilot: < 1 W
R/C device: < 100 mW
Amateur Radio: 1.5 MW+ ERP

Now, in looking over that list, can you think of any reason that one of
those activities may have been singled out for licensing? Add to that the
fact that all of the other activities you mention that involve radio require
FCC Certificated equipment to be used legally; hams can construct their own
equipment, being required to meet FCC regulations in the process. Clearly,
you are comparing apples and oranges, or in some cases on the list you
provided, apples and rocks.

> By the way Jim who the hell are you gonna MORSE with? Aliens, Russian SPY
> ships, the Space Shuttle, clandestine operatives so deep under cover that
> they can't afford voice transmission equipment (poor bastards). So, who
the

> HELL do you Morse too in the 21st century??? MORSE is DEAD.

If you have listened to the HF ham bands, perhaps your lack of familiarity with Morse code has caused you to confuse Morse code signals with the other digital signals that are allocated to use the same frequency. Jim will probably Morse code with me, a diehard CW op who finds it enjoyable and relaxing compared to other modes. In the 21st century, Morse use will be far from dead.

: > with my ham callsign, in California?

Went through this a few months ago to transfer a plate to a new vehicle, and, with respect to the followup answers so far, you will have to actually call them up and request form "REG 17A" and have them send it to you. The web site contains only form REG 17 which covers a lot of other "vanity" plates but not amateur radio plates.

I had sent them email and commented on the phone to them about this; so far no change.

Good luck.

Yes...I agree and this is exactly what I have been saying.
>
> It is, of course, too late to reverse this trend. Even if code was
> eliminated

Yes. Now the code speed requierement is down to a mere 5 wpm for
General Class. It might get a lot of old Tech class Hams to up-grade
but will have little or no effect in motivating techie type youngsters.
As I have always said Morse code has little to do with what is putting
Ham Radio out of style. It is goung out of style because it is not
recognized as being as mainstream as being able to communicate via cell
phones or via the Internet. Ham Radio can only legally give you
communication access to other Hams; while the other media are more
universal and can be used any way people want for entertainment, for
businees profit or for communicating with friends or relatives
whereever they may be. To top it off Ham leaders in their ignorant
attempts to popularize the hobby are trying to say that it is not a
technical hobby (which infers that you need not expect to get very
technically educated to be a ham). This is the big mistake, which is a
lot worse than the decreasing of Morse code speed requirements, the
elimination of any Morse code requirements or doing anything to forget

about Morse code. Unfortunately most Hams were, and many still are,
hung up about the code requirements that they accepted dumbed down
simplification rather than understanding the importance of promoting
Ham Radio as a TECHNICAL EDUCATIONAL HOBBY with appropriate incentives
to make much higher levels of technical requirement exams.
> tomorrow for all licence classes regardless, you would not pry the 15-
22

and it's
> full of old
> men who put you to sleep". (I conducted this interview in 1999 at a
computer
> show)
I have received the same responses from young internet users. I find
it hard to argue in favor of Ham Radio because I myself can not be sold
on the fact that having young people spend time and money learning
about and using ham radios is any better for them than seeing them
continue to use and learn about computers. Computers are now part of
the work place. It is expected that all future wage earners may have
to learn to operate computers at some level...not just scientists and
engineers and office workers but everyone down to super market
cashiers. The skilled, semi-skilled and even the un-skilled will be
computer literate to some extent, as computers become easier for all to
operate. All people will thus have the ability to communicate
digitally and new forms of more efficient communication devices will
continue to evolve. If Ham Radio doesn't keep up, it is destined to
seem even older and more obsolete than it does at present.

> I rest my case. Ham Radio - R.I.P.

YEP...R.I.P. UNLESS we make Ham Radio a challenging and technical
hobby with unlimited future potential to have future Hams evolve as
respected capable electronic communications technologists.

> > Based on these facts, you can see that the new license structure
isn't

Nah...today they won't crusify truth tellers. They instead just tend
to ignore what they don't want to hear and continue to send out
questionairs where there are no truthful boxes to check.

73,
Hams need MORE license classes,
Bob Wex W2ILP says don't let Ham Radio just Rest In Peace (R.I.P.)
remember that W2ILP says it should Intelligently Live Peacefully
(I.L.P.)
Don't waste time arguing about Morse code....Fight to keep Ham Radio a
technical educational hobby with the same basis and purpose that it has
traditionally always had.

A wise man has said:
He who is content within himself
Has done a worthless work.
Achievement is the beginning of failure.
Fame is the beginning of disgrace.
--Chuang Tzu--

The guy who got nailed up...
was not the "He who" guy of
Chuang Tzu. Tzu's guy was
just the opposite. He was
not just truthful. He was
mortal. Nobody worships
Tzu's "He who" guy , for him
honor was the beginning of
remaining unknown.

Dennis, I spoke about the COUNTRY (i.e its size in squared kilometers
for example). The density of hams (numbers of hams divided by the
surface) is smaller in USA than in FRANCE.

Ham radio has never been only about communication. When I was 10 years old, I could pick up the telephone and communicate with the kid next door. But we still got those tin cans and wire and made our tin-can phone and said those famous words, "Can you hear me?"

When I was 13, I got my Novice. I could pick up the phone and call Windsor, CT at any time, but when I worked WN1DGK in Windsor, I was thrilled.

Hi,
I am a man in Florida who is looking to get licensed to operate a Ham radio. I live in Boca Raton. I have been to the FCC Amateur Service Web site and even sent them an email to which they responded. I was told by the FCC to use the ARRL in pursuing my license.

I called the people listed with the League and am still waiting to hear back from them. I tried several different orgs locally and none seem interested in helping a new guy get a license. I really only need a place to take the tests, I have the study materials. I had heard of the spirit of good will that existed between hams and those seeking to be hams, however, it seems to be something that has faded away.

If anyone has any ideas or tips as to how/when/where I can get tested I would like to hear from you.

Pax,
ML

If you go to the ARRL WEB site you will find a listing of all exam sessions offered by the ARRL VEC. These will generally be offered by clubs and most do not require any advance registration. You can search for all in FLorida or limit the distance from a zip code. Other VECs (for example W5YI) also have schedules on their pages.

>media. What is left????

Fortunately neither the FCC nor the ham population
has ever taken such a narrow view of ham radio and who
or why it attracts anyone.

>Only those techie types who may be attracted
>by the TECHNICAL CHALLENGES that building and operating a Ham station
>may still offer.

Bunk. When I first became a novice there was as much
or as little technical challenge as anyone might want.
Since WW-2 amateur radio has offered anyone the chance
to be a ham with minimal or no technical challenge simply
by burchasing everything "off the shelf" and ready to go.

>Without that technical challenge Ham Radio offers
>very little to compete for the time of a person who might feel that he
>or she could better spend their passtime doing something else.

Your mistake in logic is that you seem to be saying that
as long as the ability to get on the air via the "appliance"
route exists that others will not see or believe that ham
radio can be technically challenging. That is simply not
true as the opportunity to be technically challenged (in
any way you wish to define technically challenged) is
an option anyone can follow at their own choosing.
I suspect you are simply disappointed that more hams
do not follow that path.

>So in that respect Ham Radio has no class
>but a TECHNICALLY CHALLENGING CLASS.

I absolutely DISagree.

<SNIP>

>I am an Extra class ham who has little or nothing to gain if the
>licensing requirements are increased or decreased. Most Hams are not
>paranoids in that respect...BUT some of us have enough respect for Ham

>Radio that we do care where it may go in the future. The future

>However we may want to feel that Ham Radio can survive and that it may
>continue to be thought of as an asset rather than a hinderence to the
>USA and the world. To be an asset it must retain a basis and purpose.

And that basis and purpose for the service as a whole
is clearly identified in Part 97 already.

>You can call anyone anything that you want to call them Mark BUT that
>does not make them what you call them. I'm not an elitist...
>I'm w2ilp...not *W*2*I*L*P*...I'm just another Ham. My Extra class
>ticket means very little and it will mean even less when every Ham is
>Extra class and what Extra class Hams know can not even get them an
>elementrary technician job in the modern world.

And that has been the case for a VERRRRY long time. It
probably dates back to the late 50s and early 60s when
the technology of electronics began making quantum leaps
forward (transistors, solid state circuits, IC chips, etc).

Indeed, the day will NOT come again when a
ham with ONLY an extra class license as his/her
credentials is likly to be hired into an elementary
technician job.

Cheers,
Bill K2UNK

The agencies and people served by Amateur Radio emergency communications could care one whit about whether the ham who is handling emergency traffic is technical or is an appliance operator. When Steve Mansfield goes to DC to talk to Congressfolks, they are much more interested in emergency communications than technology. Give the media a choice between running a story about ham-radio technology or ham radio emergency communications, and they will pick the latter every time.

Major Solar Storm Detected

By Joseph B. Verrengia
AP Science Writer
Wednesday, June 7, 2000; 3:11 p.m. EDT

BOULDER, Colo.�� Scientists have detected a major solar flare erupting on the sun that could buffet Earth with a geomagnetic storm in the next two days.

The blast of charged solar particles already is producing scattered radio blackouts but is not expected to significantly disrupt telecommunications or electrical power. It might generate a dramatic light show for midnight stargazers in the northern latitudes until early Saturday.

The sun is approaching the height of its 11-year storm cycle. Unlike previous cycles, this period has been relatively quiet, with eruptions every two months or so.

This storm is estimated to be 20 times stronger than a solar flare in early April.

"Finally, the sun is beginning to flex its muscles," said solar forecaster Dave Speich of the federal Space Environment Center in Boulder.

The latest eruption came at midday Tuesday from a cluster of sunspots on the upper left of the sun as viewed from Earth. A powerful X-ray flare ejected an estimated billion tons of charged particles into space.

Riding the solar wind at speeds up to 2 million mph, the particles should zap Earth's magnetic field late Thursday or early Friday. The sunspot cluster could be active another eight days.

Solar flares can create electrical disturbances that disrupt power supplies, telecommunications and signals that control pipelines and other systems. The particles can damage satellites and alter their orbits.

The storm is rated as moderate on the federal government's new space weather scale.

In 1989, a severe solar storm knocked out power stations serving Canada and the northeastern states, as well as an electrical transformer in New Jersey. Since then, power grid and satellite operators have taken steps to protect their systems.

The clouds of charged particles also produce the aurora borealis, or northern lights. Weather permitting, the light show from this storm could be

visible as far south as Washington, D.C.

Dear OMs and YLs,

from june, 27th till June 30th 2000 Braunschweig will welcome about 100 young people from its twin towns for a youth conference. The conference "Meet the future" takes place in neighbourhood to the EXPO2000 (world exposition) in Hanover.
We would like to show to these young people the idea of communication with amateur radio. For this reason we are searching for Hams in the twin towns of Braunschweig to meet on out frequencies betwwen 16:00 and 20:00 UTC on these days.

The twinned towns of Braunschweig are:
Bandung, Indonesia
Hiryat Tivon, Israel
Omaha, USA
Somme, Tunesia
Bath, UK
Nimes, France
Pecs, Hungary

if you life in or near by one of these towns (or if you know a Ham living there), please contact me via email (s.krueger@tu-bs.de) to make an appointment for a QSO.

Thanks, 73
Sven

When I applied, yes, I did submit a copy of my [amateur radio] license. I applied for the plates 3 months after I got my current call.

> one untill it got hit by lightning!!

No - these aren't safe. One of my neighbors has one and my Kenwood TM-2400 two-way radio picks it up just fine. Note that since 2390-2450 MHz is also an amateur band, they CAN'T prevent us from listening to an unscrambled signal (just like with 902-928 MHz).

[The neighbors stopped using it after I complained to them OVER THEIR PHONE for failing to identify - I wasn't aware that it was a cordless phone being used at the time.....]

The key word is "valid."

>As I read that, a call of the format A<num><letter><letter> is valid

That's not a valid US callsign format. The US is alloted only
the AA through AL portion of the A-block. Hence, A cannot stand
alone as a prefix. The US *is* assigned the entire K-block,
N-block, and W-block, so K, N, and W can and do appear as stand-
alone prefixes; but not so with the A-block.

>So, is an A<num><letter><letter> call valid?

No.

Roger,
You're right about subscribing if the mag is truly wanted but we must not ignore the ominous sign of major trouble for the League if QST can't be bought "over the counter."
Apply it to something really big such as Newsweek. How would we view things if suddenly it became less attainable as kiosks? The Plague...oops..I mean the League must be concerned.

Cecil...

I know you are a very smart guy. I stumbled accross your comments in the "speed of light exceeded" topic, and now I am sure that you are having a good chuckle at my expense.

That's OK!

But remember that in my original post about the transistor radio parts being used to create a spark gap transmitter, I didn't mention efficiency, ERP, or "final stage" power of any spark-gap transmitter.

I was trying to show the fellow who bad-mouthed amateur radio that it is better to understand for one's self rather than depend on others who understand for us. It is especially curious that someone should bad-mouth the very people who are to be credited with many of the advances that give the bad-mouther a comfortable, cushy communications lifestyle.

And everything that I proposed was in line with current EMF radiation theory (granted, in a very simple way).

Twist me a little more!! But now I think I am sure that you knew where I was coming from, right from the start!

John

Cecil...

I loved the MATRIX!

But let me twist _your_ ears a little bit.

If I charge a low voltage capacitor to its capacity, and then I
short its leads, does it result in an electromagnetic
disturbance, or not?

eavsdropping
> form scanners?

Theoretically, no wireless signal is totally secure from evasdropping.
There are new methods such as spread spectrum or "frequency
hopping" which shift the operating frequency of the phone across
several "channels" in a random sequence. Most die-hard techc who
want to listen can find a way to however, if they want to enough.
Often a phone call to the phone manufacturer's technical support line
in the guise of a service tech fixing one will get you info on how to
"test" the phone, but anymore it's easire using the old fashoned
inductive loop on the phone wire outside the house or down the
alley on the pole where the junction box is located. (an old favorite
with "professional" evasdroppers since the 60's - open the telephone
junction cabinet, place a high impedance tap, and your set)

I would be MUCH MORE concerned however at the operating frequency
of the phone. If their really going up to 2.4 Gig I WOULD NOT use one
period. Your getting intop the bottom half of the microwave RF band
and there have been studies in Europe (that have been suppressed in
the USA) showing that things like newer cell phones do indeed heat the
tissues
of the user, possibly leading to cancer a few years down the road.

It's not without risks at the 900 mHz they now operate at. 2.4 Gig is
downright
hazardous in my opinion. Stick with a traditional wired phone. Get a L-O-N-G
cord instead and you'll be OK.

426. IFR 1500 Service Monitor

I carry a VHF radio and have the following list of frequencies
programmed when I go to Rainier. I'm not sure which freq is for what
purpose, I scan them. I generally get traffic stops and backcountry
rangers, but not much from climbing rangers. They may have a different
freq which I am not aware of.

>surface) is smaller in USA than in FRANCE.

This is an interesting way to look at it, but I'm not sure that it is quite correct even still. The CIA World Fact Book lists the land area of metropolitan France as 545,630 km^2 and the USA as 9,158,960 km^2. This is a factor of a bit less than 17, and 17 times 18000 is still smaller than 670,000. Germany is, of course, very dense by this measure.

It is interesting to note, however, that Trinidad & Tobago, with 450 hams in only 5,130 km^2, has a higher density than the USA and, I understand, has a no-code HF license, while Canada, which is a bit bigger than the USA and has only 45,000 hams, still demands a higher-speed code test for full HF privileges. I wonder if that correlation is significant.

...and you can quote part 97.1 to these people until you're blue. It means about as much to them as the 55 MPH speed limit means to most motorists. The reasons you state above are the reasons I obtained a license. Wallpaper chasing soon became boring, as did most other ham conversations. The main thing on the minds of most hams is recreation, not service.

2.4 GHz I wonder about as well.

My Sanyo MW oven I have had for 15 yrs operates at 2.45GHz, and at
700 watts, it heats beanie-weenies pretty well. I realize the cordless
phone handset is running in the milliwatt range, but there exists a
question of cumulativity in RF exposure.

Tuned into 3.941 last nite per a tip via
an e-mail from a SWL. I was expecting a couple
of farts to be duking it out or something else
lame and ham-mish. Instead, there it was!!
THE PORKBUTT SONG bein played at a room filling
15dB-over-S9! The cherry on the cake was an
occasional drop-in of an echo-chamber which
only enhanced the "aye..aye...ayeeee" More listening
seems to indicate that there has been a radio war
going on for a bit between a group on 3.941 and 3.945
Yes folks, it looks like this is a spot that holds much
potential radio fun SWL'ing. Enjoy (..ya've earned it!)

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr26_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr26_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr26_45.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

73 es agbp de Frank (DL1YDL), DL-CW-C #030

Source record: 109561

Joe,
It's due to the following reasons:
1. Computers are greatly outselling transceivers.
2. Ham radio band conditions are the worst of all time.
3. Dissatisfaction among the tried and true hams who had to work to become licensed versus these "Welfare Bumops" who were handed theirs like food stamps to those underserving of them.
4. Enforcement, bordering at times on the unreasonable and capricious, has curtailed freedom of speech to the point of ridiculousness.
The way it look now, ham radio is shrinking instead of expanding but keep the faith because we can always count on genius movies like "Frequency" to give our hobby/service the Born Again look. Hallelujah brother!

442. Perplexed about VANITY formats

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-07 00:00:00 UTC
From: techguy0101@my-deja.com
Message-ID: <8hll3c$98$1@nnrp1.deja.com>
Source record: 109562

I am a little confused about what formats of call signs are valid for a vanity call.

The ARRL site has the following....

"Extra class licensees can choose pretty much any vacant but valid US call sign--FCC call sign Groups A, B, C or D. Although Advanced class licensees cannot seek the special 1x2, 2x1 or 2x2 (beginning with letter "A") Extra class type call signs....."

As I read that, a call of the format A<num><letter><letter> is valid for a US Extra operator. But when I checked several of the databases, not a single call I thought of using has been taken. In fact, I could not INVENT one that *had*.....which of course makes me suspicious.

So, is an A<num><letter><letter> call valid?

Thnx for the assistance!

> Nothing Nontechnical has any class? Bull

What I said was:..."If it is not seen as a technical feat it has no
class. This, I explained, is becauase the appeal to become a Ham is
not one to attract athletes or good health seekers...nor is it a any
way to attract those who want to make use of efficient communications
media. What is left???? Only those techie types who may be attracted
by the TECHNICAL CHALLENGES that building and operating a Ham station
may still offer. Without that technical challenge Ham Radio offers
very little to compete for the time of a person who might feel that he
or she could better spend their passtime doing something else. So in
that respect Ham Radio has no class but a TECHNICALLY CHALLENGING CLASS.
>

I would be a paranoid if I thought that someone or some organization
was picking on me or talking down to me. That is certainly not the
case. I am an Extra class ham who has little or nothing to gain if the
licensing requirements are increased or decreased. Most Hams are not
paranoids in that respect...BUT some of us have enough respect for Ham
Radio that we do care where it may go in the future. The future
includes the time when we ourselves can no longer feel either paranoid
or elated by the fact that we have chosen Ham Radio as our
hobby...because we will be silent keys.
However we may want to feel that Ham Radio can survive and that it may
continue to be thought of as an asset rather than a hinderence to the
USA and the world. To be an asset it must retain a basis and purpose.

You can call anyone anything that you want to call them Mark BUT that
does not make them what you call them. I'm not an elitist...
I'm w2ilp...not *W*2*I*L*P*...I'm just another Ham. My Extra class
ticket means very little and it will mean even less when every Ham is
Extra class and what Extra class Hams know can not even get them an
elementrary technician job in the modern world.
73,
Please keep thinking...even if you think that I'm an elitist paranoid.

Hams need MORE license classes,

Bob Wex w2ilp (Identify Ligitimate Paranoids?) Hmmm...Maybe Mark is a
paranoid because he is worried that other Hams are elitists. Maybe we
need a psychologist's opinion...which could be worth more than his
opinion about commemorative postage stamps.

450. club station apps

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-07 00:00:00 UTC
From: Scott Oakland <soakland@home.com>
Message-ID: <393E65DF.32320082@home.com>
Source record: 109570

Does anyone know how to apply for a club station under the ULS system?
It is very cryptic, and wondered if anyone could give it to me step by
step - I have a TIN # for the club already and that is as far as I got.

Thanks
Scott W1LU

I live in Muncie, Indiana, about 70,000 population. Our 2 large newstands carry QST, PopComm, and CQ.

Is 73 still in business? Haven't seen them around for a while.....

>Joe, W1GFH/6

Borders is the only store that carries extensive special interest magazines. They still carry CQ, and I haven't seen any QST magazines for about two months. I don't know if it's been discontinued or if they sold out of issues for the month, since they only stock about five copies. They quit carrying 73 magazine about two years ago.

Matt:

Try the following:

12-Jun-2000 (and 10-Jul-2000, 14-Aug-2000)
Sponsor: PALMETTO ARC
Time: 06:00PM (Walk-ins allowed)
Contact: ROBERT P BRODERICK
(954)705-6391
VEC: ARRL/VEC
Location: TY PARK
OFFICE - CONFERENCE ROOM
CORNER SHERIDEN ST & PARK RD
ALL SESSIONS AT 6:00 PM SHARP
FORT LAUDERDALE, FL 33310

10-Jun-2000 (also 08-Jul-2000 ,12-Aug-2000)
Sponsor: K4VMC VA MED CTR ARC
Time: 9:00 AM (Walk-ins allowed)
Contact: WILLIAM L ROGERS
(561)965-5511
VEC: ARRL/VEC
Location: DEPT OF VETERANS AFFAIRS
MEDICAL CENTER - RM 1C135
7305 NORTH MILITARY TRAIL
WEST PALM BEACH, FL 33410

The drive is about the same either way but the date and time may be an
issue!
"Walk-ins are allowed" means no appointment/phone call hassles... just show
up
with cash ($6.65 processing fee per test attempt), a picture ID, pen,
pencil, copies
and originals of any old licenses or CSCE's. That's it!

Hope this helps.

Good Luck,
Mike Williams

well it looks like their time is coming, it seems uncle is busy in the enforcement mode again. riley is on his white horse riding to the rescue. what is interesting is how they catch people jamming and whatnot, even though they are mobile. to me, it is really silly how much of the fcc's time is spent investigating reports of exams being fixed or sold, or whatever and rampant cheating . good grief, is it really necessary to cheat on a damn no code test? give me a break, boy these people must be real crackerheads. oh well, this is the face of the new ham radio band. come on in boys the water is hot, its been this way on the 11 meter band for 30 years or so, but you all already know that , but at least we admit it,.....cd is out....

techguy0101@my-deja.com wrote:

If I read your post correctly, I believe you are asking if you can get a 1x2 or a 1x3 call with a prefix A. The answer is no. Single letter prefixes starting with A are not U.S. calls. For example, A2 is Botswana, A3 is Tonga, A4 is Oman, A5 is Bhutan, A6 is UAE, A7 is Qatar, A9 is Bahrain. In all of those cases, the callsign will have a 2 digit number, such as A92. A U.S. call beginning with A has to have another letter, A-L, associated with it in the prefix. That's why you haven't found any.

You bet your bippies, THANK YOU Pres. Cinton. Even though you were a womanizer who was ridiculed by your hypocritically equally womanizing opposition, YOU CARE, which is a damn sight more important to the well-being of this nation than the hard hearted, non-caring rightwing bozo anti-people philosophy of Armey, Lott and their corrupt cronies.

Medicare to cover costs of clinical trials

Medicare covers 39 million elderly and disabled Americans. Many private insurers follow its example in deciding what to cover. WASHINGTON - President Clinton Wednesday directed that Medicare begin covering costs of routine patient care associated with clinical tests of new drugs and medical treatments. Clinton is concerned that too few older Americans take part in clinical trials, the White House said. Only about 1% of elderly Americans participate in clinical trials of drugs and treatments even though the elderly are more severely affected by disease than are younger people. The White House cited findings that 63% of cancer patients are older than 65 but people that age make up only 33% of those enrolled in clinical trials. The administration said current Medicare reimbursement policy could discourage older people from taking part in clinical trials because the investigators running the tests cannot be sure that Medicare will pay for the care.

Any time electrons flow in unison there is some electronic
disturbance that results. Anything that moves in an electric field
generates a magnetic field and any conductor that moves in a magnetic
field generates an electric current. Any field may be a disturbance to
any other fields anywhere....even in left field... even in miscelaneous.
When the Ham population signifiently increases or decreases it can
be a reason to post about it in rec.radio.amateur.misc. It is well
withing the field of such a category since it signifies a probable
disturbance to the total basis and purpose of amateur radio...just as
much as a gigantic solar flare. There sure will be some miscellaneous
effects involved!
People who believe that electricity flows from + to - use the right
hand rule. People who believe that electricity flows from - to + use
the left hand rule. Let me put another twist on the subject. People
who believe that Ham Radio is not a technical hobby are trying to make
up their own dumbed down rules which can cause such a disturbance that
hams will flow away from the hobby and non-hams will be so repelled as
to never consider becoming hams.
This is my unified field theory. I'm just a ham. I don't promote any
hand rules but sometimes I think we need to signal that uses some
finger rules. I dunno if they will only include thumbs up. Surely
some concepts recently enacted call for other miscelaneous finger
gestures.

Hams need MORE license classes,

Their is quite a lot of difference in your oven feeding 700 watts into
the cavity where the food is placed as compared to a 35-50mw output
cordless phone or 1 W-PEP GSM phone. True enough you are beginning to
reach a radiation frequency that is of an Ionizing nature but the
exposure rate is so low as to be of little concern.
As to cumulative RF exposure you need enough power cause tissue heating
that exceeds your bodies cooling ability. In the case of phones you
don't receive enough exposure to cause a problem. I would be more
concerned with the exposure I receive from the Sun on a clear summer
day.

The couple of studies that have been sensationalized by US and
International media concern contradict 10+ years of cellular phone
specific exposure research in the field by dozens of researchers all
over the world.

Most are about 0.7 W

> GPS receiver: < 1 mW
> Cordless telephone: < 1 W
Some are > 1 W.

> computer: < 1 mW
Without considering computer monitors.

> TV: <1 mW

Wrong: TV horizontal deflection up to 180 watts DC input at the 15,750
Hz class C power amplifier, whose output flyback transformer can
develop CRT anode voltages as high as 35 Kv. This is often poorly
shielded and can radiate well enought to light a neon lamp brought near
to the TV set.

Similar radiation may be possible from computer monitor CRTs.

> Stereo: < 1 mW

Wrong. As high as 500 watts peak audio output. Actual average music power may be less than 10 watts depending on room accoustical needs for reasopnable volume. The best Hi Fi sets have the most dynamic power ranges and the greatest potential of generating super sonic power (above the audio range).

> VCR: < 1 mW
> FRS: < 1 W
> CB: ~ 100 W max (ERP)
> Palm pilot: < 1 W
> R/C device: < 100 mW
> Amateur Radio: 1.5 MW+ ERP
IMHO this is only true when DUMMY LOADS are in use....or...
ONLY if RF output is efficiently matched to transmission line and antenna system...If not the entire ham station may not be at RF ground and may be radiating up to the full 1.5 KW output! This is why hams need to be licensed so that they are aware of properly loading their transmitters...and why Hams are asked not to use more RF power output than may be required for their communication purpose requirements.

Microwave oven: 600 - 1200 Watts cooking power. Radiation is only probable if door interlock is defeated or if door closure is defective.

Automotive ignition: up to 2500 watts peak pulse power....but is well shielded in most, but not all, metal bodied cars and trucks.

All electrical appliances which are powered for the AC power line can radiate at 60 Hz, often at levels far greater than mentioned. Devices that dissapate high power also radiate the most. Presently this 60 Hz radiation is not thought to pose a health threat to humans but it was at one time suspected of being dangerous...and cause some folks to stop using electric blankets, hair dryers and curling irons.

Clearly,
> you are comparing apples and oranges, or in some cases on the list you
> provided, apples and rocks.

How can we keep Hams from radiating?
>
> > By the way Jim who the hell are you gonna MORSE with? Aliens,

Yep the SETI folks are just listening to for Aliens. They don't expect that the Aliens will know Morse because if they are smart enough to radiate enough power to reach us without frying themselves they must have advanced beyond their Morse code era. Hmmm...I wonder if the Aliens need a license to try to talk to us. I don't think that their leaders would tell them that interspace communication is not a technical hobby so they probably must take licensing tests.

If E.T. can radiate home - he must have reciprocal license privilages or Hollingsworth can stop him. Nah...If he visits Earth he can easily get a VHF and above Tech license and dish out a beacon to whereever he came from.

> Russian SPY
> > ships, the Space Shuttle, clandestine operatives so deep under cover that
> > they can't afford voice transmission equipment (poor bastards).

Seriously, SLF may only support CW transmissions because there is not enough bandwidth for any faster type of modulation. This has nothing to do with the pedigree or wealth of the operators.

> So, who
> the
> > HELL do you Morse too in the 21st century??? MORSE is DEAD.

BUT not as a hobby for those who enjoy showing that they already have mastered it! As long as there are Hams who love CW there will be Hams with the same feeling for them to didah to. The same can be said for audio communication between birds and between frogs...They will tweet and croak until they become extinct. Some say that "Old Hams never die they only fade away due to QSB".

> If you have listened to the HF ham bands, perhaps your lack of familiarity

> far from dead.

Morse doesn't sound like any other digital signals. BTW ECM operators are taught to recognize and identify radar signals and digital signals by listening to their electronically streached pulses which are often in the audio frequency ranges. (PRFs sound a lot different than Morse).

>foreign technicians visas because industries claim that there is a
>shortage of technical people in the USA.

I get to see inside quite a few companies, and I am pretty sure the shortage is not technicians in general but rather development engineers in particular. While the sales and support and marketing and finance and management of companies still appears to match the population in general (i.e. most people who live here were born here), development engineering departments tend to be staffed by an abnormally high percentage of foreign-born engineers. This is very particularly true among younger engineers, say under 35 or so. And I can tell you that, while companies don't usually care very much where their employees were born, they very much prefer to hire residents who are free to work rather than suffering through INS torture to obtain an H1B for a new employee, yet visa quotas get used up in record time. Even the residents that come for interviews for development positions tend not to have been born in the USA to a much greater extent than the population mix would suggest. Young Americans generally seem less interested in engineering than they used to be.

This is particularly odd since in fact where I live, despite other drawbacks it might have, has got to be about the best place anywhere to be an engineer. Demand for engineering talent is huge, there is a big variety of interesting work to choose from, and salaries are high. It is sometimes the case, probably more frequently than any other time and place ever, that engineers here can become quite wealthy.

>I am not disappointed with reality. My main point is to state that the
>techie types who can now be inspired by the TECHNICAL CHALLENGES of Ham
>Radio are the ones who we must reach if we want the hobby to survive.

If what I mentioned above is insufficient incentive for greater numbers of young Americans to aspire to become technically competent then I have no idea what you expect to achieve by adding more amateur radio license classes, or any other tweaking of Part 97 you might want to do. You can't inspire people by laws or by money, that inspiration can ultimately only come from within each person himself.

Dennis Ferguson

481. Shockwave arrived

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-08 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8horhq$p1h$1@news.hawaii.edu>
Source record: 109401

This just in from the G-QRP email list // Jeff KH6O

================ Begin forwarded message ================

To: qrp-l@lehigh.edu
Cc: GQRP@egroups.com
Subject: [GQRP] SHOCKWAVE ARRIVED 0900Z
Date: Thu, 8 Jun 2000 11:24:20 -0600 (MDT)

Gang,
The long awaited shock wave from the first of tuesday's major flares
arrived this morning a bit ahead of schedule and IMMEDIATELY
triggered a MAJOR geomagnetic storm - now in progress.

The shock wave was first detected aboard the ACE spacecraft at
0841UTC 8JUN as the solar wind took an immediate jump from
522 km/sec to 734 km/sec.

The shockwave hit our magnetic field at 0912 UTC, immediately
raising the K index to 7 for MAJOR storm levels. The estimated
A-index so far is 111.

The K-index is a measure of the disturbance to our magnetic field
and is measured every 3 hours, on a scale from 0 (very quiet) to
9 (extreme storm). K=7 since 0900 UTC 8 June.

The A-index is the daily averaged disturbance to our magnetic
field, averaged over 24-hours, and thus a number issued once daily.

The K-index, updated every 3 hours, can be seen graphically
throughout this storm at: www.sec.noaa/today.html
This is a plot showing the proton flux (above threshold limits
right now), the DIRECTION (Hp) of the interplanetary magnetic
field and the K-index. RED bars on the K-index indicates MAJOR
storm levels, as shown right now.

Solar wind has since climbed to about 800 km/sec ... exerting lots
of pressure against our magnetic field, for a major disturbance.
Also, the direction of the interplanetary magnetic field has flipped
twice so far from northward to southward. A southward excursion,
in itself, will cause a geomagnetic storm ... and in this case
could help fuel a larger aurora than first expected.

Another nice site where this is all being discussed and periodically
updated with neat little pictures is: www.spaceweather.com

To see the actual shockwave in the solar wind as measured from
the SOHO spacecraft, see: http://umtof.umd.edu/pm/

This is a real time solar wind plot from SOHO maintained by the University of Maryland.

In short ... the HF bands are nearly trashed. The effects of all of this worsen the LOWER in frequency you do due to the absorption in the D-layer right now. But it LESSENS as you go UP in frequency, which is why such events often foster 6M/2M skip openings.

The only real uncertainty at this point is to what extent the aurora will be in this evening and friday evening from all of this.

72, Paul NA5N

> do or should be doing? NO...It is usually the other way around. Watch
> CNN.

My point exactly, Bob; hams do not need the "blessing" of the FCC exam process to be able to go forth and do; those few who have that interest have a much better incentive than the licensing process with which to explore the type of technology that you have been talking about. IMHO, the exams should continue to be what they have been for decades, a good balance of the techncial and operating interests that serve to demonstrate a fundamental understanding of things radio and electronic and serve as an indication that the ham can operate within the rules and has the potential to advance operationally and technically. I don't understand why you do believe that the exam process is more incentive than the potential for accomplishment.

> What is that supposed to prove??? Such publicity can not be expected
> to get many people interested in being Hams but semi-technical articles
> about computers might get them interested in buying a PC and becoming
> PC user hobbyists.

If it is articles that you think will kindle interest, there are articles in QST and QEX and the Handbook and a host of other magazines (ARRL and other) and publications (ARRL and other) that serve the need.

> Emergency preparedness may still be an important asset BUT it is only
> one paragraph of the five Basis and Purpose paragraphs of Part 97!

Yes, but it is the one listed first, and by my read, only one of the five basic purposes addresses ONLY technical issues. The second and third give equal billing to the communications and technical aspects of Amateur Radio. By that count, the tally is:

Non-Technical Purposes of Amateur Radio: 3
Technical Purpose of Amateur Radio: 2

Of course, counting the bullet points is silly; 97.1 gives a pretty clear indication of what is expected of us, but none of us address all the points equally. As a Service, IMHO, we continue to meet them.

> I like the way you are continuing to think Ed...You are disproving a
> lot of opinions that are opposed to my views by your astute
> observations. Please keep thinking.

Of course, I think that some of my "astute observations" are disproving a few of your opinions, too, Bob. :-) Please understand, I am NOT saying that Amateur Radio should be devoid of things techncial, only that what I believe you are proposing -- an examination process that makes Amateur Radio the equivalent of a BSEE, would be of interest to only a few thousand people, I am sure, tipping the scales too much in the other direction away from some of the important operational achievements of hams whose bent is toward the level of technical in the present exams. Ham radio should always be "a cut above," perhaps, but not so far above that it becomes elite.

73,

I was rounding up to the nearest decade, and some cell phone antennas have gain. Remember, I was talking ERP. (EIRP, actually, but who's quibbling.) And for a few of your other examples, I was doing a fast estimate, and considering only RF radiation, so a few may have been off a bit.

> than may be required for their communication purpose requirements.

Well, yes; with 1500 watts transmit power and antenna gain of 30 dB or more, I felt my estimate of 1.5 MW to be pretty realistic. Why would you feel that a ham station is capable of 1.5 megawatts only when it is operated into a dummy load?

> How can we keep Hams from radiating?

I don't understand the question in relationship to this thread. Did you misunderstand something along the way? I was explaining that amateur stations can radiate significantly more power than the other examples he offered, thus the reasons for amateur radio being licensed and the other consumer equipment being unlicensed. In what way do you think the 1.5 MW+ ERP of a ham station supports anything other than that conclusion?

> > By the way Jim who the hell are you gonna MORSE with? Aliens,

Actually, I wonder if we would hear them at all. If they have moved their technology from narrowband to broadband, as is happening in many radio Services, their signals would be indistinguishable from noise, unless we knew their spreading codes. :-)

There is a kit available through Fry Electronics (I don't remember the
brand) that uses the 300 and 310 MHz bands for digital remote control of
things like garage doors.

The first thing the Nazis did to gain power was to label everyone opposed to them, socialists, communists, Christian Democrats and Jews. The problem is that right here in our beloved USA, a lot of you who are narrow minded are falling for the same rhetoric heard in Germany in the '20s and '30s. Too many of you show disrespect for our officials in high office which is no different than shredding our flag and Constitution. I say hang your heads in shame because you don't understand and appreciate what a democracy is all about.

Bob Wex w2ilp <w2ilp@juno.com> wrote:

> What I said was:..."If it is not seen as a technical feat it has no
> class.

Would you really offer that hams who have stayed awake for ungodly amounts of time passing traffic in emergencies have no class? Would you really say that the hams who spend hours and hours teaching ham radio classes (and you are claiming that the exams are not technical) have no class? How about those who show up month after month to conduct VE sessions -- no class? Have you met the hams who conduct the local hamfests, donating time, and sometimes money, to help hams commune with each other doing something fun. Are they without class, too? I have a dear friend, Howie, who is really not technical, but he spends every morning acting as net control for the CW county hunter's net; is he not a classy guy? I can think of many ham activities and many people in ham radio, while not up to *your* technical standards, have as much class as any I know.

I do not take exception to your conclusion that technical knowledge is good for ham radio, but I do take exception to your conclusion that only what is of interest to you is of value to ham radio.

> ...nor is it a any way to attract those who want to make use of efficient

> So in that respect Ham Radio has no class but a TECHNICALLY
> CHALLENGING CLASS.

You have said that the technology of modern amateur radio is not enough. You have said that there are more efficient communications media than ham radio. Yet, in the face of that, far more than "only the techie types" have been attracted to and are licensed in ham radio. Your premise is flawed, therefore so is your conclusion.

> However we may want to feel that Ham Radio can survive and that it may
> continue to be thought of as an asset rather than a hinderence to the
> USA and the world. To be an asset it must retain a basis and purpose.

The basis and purpose is outlines in 97.1, and as a whole, Amateur Radio meets that purpose rather nicely.

> My Extra class ticket means very little and it will mean even less when
> every Ham is Extra class and what Extra class Hams know can not even
> get them an elementrary technician job in the modern world.

An electronics technician generally needs an Associates degree in some electronics science (or equivalent experience). The Extra of the 60s may have come close to that, but has never been even at that rudimentary level. By the 1970s, technology had increased faster than the exams. To what problem in Amateur Radio can you point and be able to link it to the fact that the Extra exam has not been, for decades, the equivalent of an Associates degree?

Bob, many people with a technical interest have always been attracted to Amateur Radio. They have NOT been attracted to ham radio because of the technology in our tests, they have been attracted to ham radio because the rules permit them to explore the parts of that technology that they find interesting. The reality of ham radio so far exceeds what could reasonbly be on any test that the technologists will come as long as the potential for technology is there for them. I can't fathom why you think the tests are more important than the reality.

500. re: Thank you "President" Billy Clinton

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-08 00:00:00 UTC
From: "J. Duffy Beischel" <duffyb01@fuse.net>
Message-ID: <sk0f1ulkh51154@corp.supernews.com>
Source record: 109420

THANK YOU TO BILLY & AL

As a disgruntled Democrat was making his daily journey to the Post Office the other day, he patiently waited for a car to vacate a parking space near the door. As the rear of the vehicle came toward him, he noticed a bumper sticker that read, in big, bold letters, "THANK ME. I VOTED CLINTON-GORE."

Of course, the bumper sticker was printed in response to an earlier sticker that adorned some automobiles six years ago. Back then, as President Bill and Hillary were attempting to nationalize health care and play havoc with the discipline and fiber of the military, "Don't Blame Me. I voted for Bush" was the message on many bumpers.

Pondering the message of the brave, stubborn soul in the car ahead of him, he considered all the things he could be thankful for as a result of the Clinton-Gore regime. He discovered that the list is long.

THANK YOU for introducing us to Gennifer Flowers, Paula Jones, Monica Lewinsky and about two dozen other names that we might not have met and known otherwise.

THANK YOU for allowing a war hero and the author of one of the most successful military campaigns in history to leave the presidency, because, no matter how successful he was, we, in all our moral outrage, just couldn't tolerate someone who would lie to the American people by promising "no new taxes' and then going back on his word. We certainly can't have liar in the White House, can we?

THANK YOU for showing all the men and women in America that sexual harassment in the work place, and on the job, is okay as long as it involves powerful middle-age executives and the young women half their age under their power. It is, after all, a "private matter."

THANK YOU for revealing that the agenda of the National Organization of Women only includes some women. Women like Anita Hill, and not women like Paula Jones, Monica Lewinsky, etc.

THANK YOU for allowing us to come to the realization that "sexual relations" is not clearly defined after all. And all these years, I thought that oral sex really had something to do with sex.

THANK YOU for giving us a president who discusses his choice of underwear with teenagers. We always wondered if presidents wore boxers or briefs.

THANK YOU for installing a man who reminds us of those good old days of pot smoking (without inhaling) and war protesting.

THANK YOU for showing us that the ridiculous plot of the movie, "Wag the Dog," could really be plausible after all.

THANK YOU for re-introducing the concept of "impeachment" to a new generation that missed the discussion surrounding it the last time it was brought up.

THANK YOU for curing me of my addiction to the evening news.

THANK YOU for reminding us that the government that gave us the Internal Revenue Service and the welfare state, also lusts for control of the greatest health care system in the world.

THANK YOU for reminding us that the FBI, who has a file on millions of Americans, can give those files to people powerful enough to demand them.

THANK YOU for reminding us that, when all is said and done, character does really, really matter.

THANK YOU for making Dan Quayle look like a Rhodes Scholar.

THANK YOU for making Jimmy Carter look competent.

THANK YOU for making Gerald Ford look graceful.

THANK YOU for making Richard Nixon look honest.

THANK YOU for making Lyndon Johnson look truthful.

THANK YOU for making John Kennedy look moral.

THANK YOU for reminding us of the importance of term limits.

And THANK YOU that if it were not for you, instead of the current, interesting discussion all over the television networks and newspapers, we would be forced to focus on a whole slew of trivial matters like: giving secrets to China in exchange for campaign contributions, global defense, the economy, nuclear weapons in North Korea, genocide in Africa and Kosovo, the containment of terrorism, and all those other boring topics.

And THANK YOU that since Clinton-Gore took office, the following good things have happened: 72 House and Senate witnesses to the Clinton-Gore scandals have taken the Fifth Amendment; 17 witnesses have fled the country to avoid testifying; 19 foreign witnesses have refused to be interviewed by US investigative bodies; 19 have been charged in Whitewater investigations; 4 have been convicted in Whitewater investigations; 8 are serving prison time in Whitewater investigations; 55 people have been charged in the Clinton-Gore scandals. 32 people have been convicted (so far) in these scandals. 14 people are serving prison time (so far) in these scandals. There were 938 overnight stays at the White House for supporters. The cost of Ken Starr's two year investigation.....$48 million. The cost of Clinton's ten day trip to China .....$49 million.

THANK YOU for a most interesting seven full years of "the most ethical administration in the history of the Republic" (one of Clinton's campaign promises!). But then, everybody knows it is all the fault of the "vast

right-wing conspiracy!"

It has become more evident to me that now more than ever the world needs us as free Americans to hold firmly to the ideals our forefathers fought so hard for. Its us Americans that created the rules for true freedom. It seems to me a lot of people forgot just how many men have died so they can enjoy the comfort the American culture has to give. They constantly contradict freedom by criticizing others for their choices but thats the price of freedom in allowing us to own guns and him/her to worship in their own way or chose their sexual preference. I may not like your choices but I must allow you them in order to keep mine. This concept is hard for guys like AF2Y to grasp because his focus is narrow and hes to proud to expand his focus to the big picture. He sits down in front of the tube and sees that some child was killed by the terrible gun and in his perspective thinks melt all the guns into scrap iron. The complexities of a free society are just more than he can bare. This paranoia stems from a lack of understanding and not knowing the work its taken to make an AMERICA. I think the majority of people have the courage and the backbone to preserve our way of life so that what took place in Australia won't happen here because if it does were no different than any other country on Earth and were no longer AMERICA.

Being able to buy QST OTC is a recent experiment. For decades you could only get it by membership in the League. It was just a few years ago that the League began making OTC copies available to the public.

In our one-hundred year history, only a small percentage of each generation has shown an interest in the self-learning of electronic theory, soldering, reading and understanding schematics, collecting components, assembling radios, national and international radio laws, ionospheric propagation and antenna theory, assembling antennas, and communicating world-wide by RF emissions. It's very specialized; it was never an everyman's hobby. That we have 670,000 licensees attempting to abide by our fundamental purpose (Title 47 CFR 97.1) is in itself amazing.

Need new crystals for a commercial band Yaesu HT (FTC-2205) for 2m:

39.6667 MHz (lowers its range from 150-155 to 146-151 MHz)
38.8000 MHz (to give it 600 kHz transmit offset).

(This pup uses a diode array for programming. Yaesu sent me the
programming scheme.)

Thanks!
Jeff KH6O

Shortwave is *WEIRD* tonight, no doubt about it. A lot of weird noise
all over the bands, and some of the major broadcasters are swamped.

<<Being able to buy QST OTC is a recent experiment. For decades you could only get it by membership in the League. It was just a few years ago that the League began making OTC copies available to the public.>>

Hi Jeff,
As a kid in the early 60's who had a vague fascination with radios I was stunned one day to come across a magazine at the local newsstand in my small New Hampshire town that proclaimed right on the cover that it was "devoted entirely to amateur radio". I bought it and read it cover to cover, discovering in the process what amateur radio was all about. Needless to say, that magazine was a 1964 issue of QST, one of many I purchased over the counter that year. Maybe it's just nostalgia I'm experiencing, but I hate to think that QST will soon no longer be carried by small town newsstands.

Would this have any connection to what I saw tonight?

I'm in Victoria BC, CA, at about 49 degrees north.

I was walking home this evening (June 7/00) and I looked in the sky, and saw strange lights in the sky. Here is the best description I can offer.

There were two lights, which for a split second, looked like they were connected together by some sort of framework. The lights had the approximate colour of high pressure sodium bulbs. One of the lights would flash brighter than the other (at regular intervals). Let me remind you, they were much brighter than any light I've seen on any aircraft. Also they were absolutey silent when they went from straight up in the sky, towards the north, and began moving west - east for a few minutes, then dissapeared.

This occured at approximatly 23:50 on June 7/00

That's not as "few" as you think.
Canada has only 29 million people - compared to 274 million U.S.
(California has a larger population than Canada.)
Canada's 45,000 hams are proportional (population) to 450,000 here.

I upgraded at an ARRL VEC session in Slatersville, Rhode Island
on April 29th, and the FCC posted it yesterday June 6th.

My original Novice license took fifteen days, back in 1986, and
my upgrade to Technician that month took four weeks. All things
considered, I'd say that six weeks isn't too bad. I was
honestly expecting it to not show up until July...

> has ever taken such a narrow view of ham radio and who
> or why it attracts anyone.
The FCC can not determine what can motivate people to be Hams. The FCC can not think like either the general population nor like dedicated Hams because the FCC is not one person. It is an organization of people who are hired or appointed by our government. Our government is not one person either. Elections can change those in power. The next presidential election, for example, will shake out Janet Reno.
BUT
The FCC does enforce Part 97 which contains the BASIS AND PURPOSE and the DEFINITION of an Amateur Radio Operator. Of the five paragraphs of the BASIS and PURPOSE three paragraphs deal with the TECHNICAL PURPOSE OF HAM RADIO. This is even more important now that the US is giving foreign technicians visas because industries claim that there is a shortage of technical people in the USA. Now I can't say that people are motivated by Part 97 to be technical Hams. Most don't read part 97 BUT the whole culture of Ham Radio is formed by certain assumptions which come about by the type of people who are already active Hams. Even if they don't build their own radios, they are ceryainly more technically alert than the general public.

You don't have to build your own transceiver. But you have to set up a Ham station...even with store bought transceivers. You have to put up antennas and arrange you equipment in a safe manner. This might seem trivial but it is not. Most Hams are practical tecvhnicians who are able to install there own equipment and read the instruction manuals and operate properly. This is not exactly something to be sneezed at. Most Hams can also set up computer systems by following instructions. Many people in the general public must have someone connect the cables and hold their hands when they install a new store bought PC system and accessories. We take for granted that most hams do have some technical capabilities. I am willing to admit that even if they do buy finished equipment many Hams are very knowledgeable as to how that equipment works and can align and repair it in some cases. The technical challenge of Ham Radio thus can include many things that advanced Ham learn and are capable of.

> >Without that technical challenge Ham Radio offers
> >very little to compete for the time of a person who might feel that

>
> Your mistake in logic is that you seem to be saying that
> as long as the ability to get on the air via the "appliance"
> route exists that others will not see or believe that ham
> radio can be technically challenging.

Well...I don't go that far. See above. The technical challenge of setting up a Ham Station includes more than building radio transceivers. Even if a non-Ham was given a working Radio Transceiver he might not be able to set up a working Ham Station.

> That is simply not
> true as the opportunity to be technically challenged (in
> any way you wish to define technically challenged) is
> an option anyone can follow at their own choosing.
> I suspect you are simply disappointed that more hams
> do not follow that path.

I am not disappointed with reality. My main point is to state that the techie types who can now be inspired by the TECHNICAL CHALLENGES of Ham Radio are the ones who we must reach if we want the hobby to survive. They are the ones who can see value in becoming Hams that goes beyond mere entertainment. Those seeking entertainment can now get lots of it without being Hams....most of them are not interested in the technology...but many advanced techie types would rather stick to computer technology without getting Ham licenses, as they see Ham Radio as old technology. We can only appeal to such types by proving that Ham Radio is progressing into this century and not just depending on the Japanese rice-box designers but innovations are still being made by such Hams as the members of TAPR and AMSAT....and the good Hams in the ARRL lab (I hope).

> >So in that respect Ham Radio has no class
> >but a TECHNICALLY CHALLENGING CLASS.
>
> I absolutely DISagree.

Then you are wrong...because if the truth be known, when the general public who knows nothing about Ham Radio is introduced to the hobby they see it either as a TECHNICALLY CHALLENGING HOBBY or a waste of time and that is why they don't want to be Hams unless they decide to be TECHNICALLY CHALLENGED!

Yep. Please read the THREE PARAGRAPHS out of five that say Ham Radio is a TECHNICAL HOBBY.

> >You can call anyone anything that you want to call them Mark BUT that

> probably dates back to the late 50s and early 60s when
> the technology of electronics began making quantum leaps
> forward (transistors, solid state circuits, IC chips, etc).

It is a gray area and depends on individuals. Many self taught Hams develop the confidence required to tackle anything that is electronic. I have seen Hams work with transistors BEFORE there were any formal solid-state courses given at colleges. You don't have to be a thermodynamics engineer to get burned by thermal runnaways. The first people to face technical challenges are the ones who are exposed to them. This includs both lab technicians and hobbiests.

> Indeed, the day will NOT come again when a
> ham with ONLY an extra class license as his/her
> credentials is likly to be hired into an elementary
> technician job.

This depends a lot on the individuals...and if they are respected and tested by their qualified peers. If enough Hams can qualify to be capable of being prepared to deal with modern technologies...things could be different. If the hobby continues to be dumbed down in a useless attemp to attract those who only seek entertainment then you are correct. BUT Those seeking only entertainment will not be easily attracted anyway...They will not be attracted without Morse code. They will not be attracted with easy Q&As. Thus the present outlook of most of our present Ham leaders is a gross mistake. This non-technical attitude must be changed.

Normal people can only be attracted to ham radio if it presents a MODERN TECHNICAL CHALLENGE that they are willing to accept...because this type of challenge is both fun and of value to THEM.
People who arer foolish enough to becaome hams for entertainment purposes only will become disappointed and will not stay active as Hams when they learn of more entertaining media.

> communications than technology.

I believe that. Congress folks are politicians and not technically qualified to understand the evolution of technology without listening to panels of expert specialists and then making laws that show that they couldn't properly evaluate what they were told. Do inventors, economists, engineers, advertisers, investors, captains of industry, or any experts go to Congress folks to ask them what they need to do or should be doing? NO...It is usually the other way around. Watch CNN.

>Give the media a choice between running a
> story about ham-radio technology or ham radio emergency
communications, and
> they will pick the latter every time.

What is that supposed to prove??? Such publicity can not be expected to get many people interested in being Hams but semi-technical articles about computers might get them interested in buying a PC and becoming PC user hobbyists.

If the IEEE and other engineering organizations respected Hams you might get a lot of new techie Hams...BUT they now do not respect the dumbed down level that Hams have fallen to. I admit that the emergency preparedness capability of Hams is and has been one of their political assets...BUT fewer people want to be hams just to be emergency volunteers now than in the past. Hams are no longer the only civilians equipped for portable and mobile wireless operation.

Emergency preparedness may still be an important asset BUT it is only
one paragraph of the five Basis and Purpose paragraphs of Part 97!

Paul Hogan, the actor? Or the person the story was modeled after?
Either way, sad news.

Rosie O'Donnell hires armed guards. I think Webster's gonna put her
picture next to "hypocrite" in the millennium edition....

Tim,

It's part of an elaborate plan to immantize the Eschaton.
If you understand this, you have been properly illuminated...
otherwise, nevermind.

Actually, it could just be ionized particles. Charge can
transfer pretty fast, possibly explaining what looks to be
impossibly fast motion for an object with substantial mass.
But it's more fun to suppose that several governments are
conspiring to make lights shoot around in the sky for
mysterious purposes, cloak-and-dagger spy-vs-spy or
mysterious weapons research, isn't it? :)

Haven't noticed too much difference in propagation tonight, at
least Radio Netherlands on 9590 was as strong as usual.

Source?

>Australia-wide, armed robberies are up 44 percent (yes, 44 percent).

Source?

>In the state of Victoria, homicides with firearms are up 300 percent.

Source? When statistics like this are quoted, a respectable news
organization will always cite their source.

>An e-mail circulating the Web reveals the harmful effects of the Australian gun
>ban, noting that "you won't see this data on the evening news ...

One can't help but wonder how this newsmax.com site got the "data" if
the Australian news media doesn't have it. If this "data" were really
valid, one would think the Aussie news organizations would be beating
down the door to get and print it. Why didn't newsmax.com cite their
sources for the above "data"?

>Australian Gun Ban Results: Deadly!

Let's look at some real statistics with their sources:

From the US Bureau of Justice
Homicides - 6.3 in 100,000 population
http://www.ojp.usdoj.gov/bjs/homicide/totals.txt)

The same statistic for Australia, taken from the Australian Bureau of Statistics
Homicides - 1.5 in 100,000 population
http://www.abs.gov.au/Ausstats/ABS%40.nsf/94713ad445ff1425ca25682000192af2/ab5039c379d8dfa8ca2568a90015499e!OpenDocument

This shows Australia with less than a quarter of the homocide rate of America, which obviously has a higher rate of gun ownership.

Jason McCulley, et al.
As they vowed to do in the wake of the Million Mom March, Democrats on Capitol Hill begin each day by rattling off the names of gunshot victims - taking swipes at Republicans and the National Rifle Association in the process.
Among this week's Hill criers: Sen. Richard J. Durbin, Illinois Democrat, and Sen. Barbara Boxer, California Democrat and mother-in-law of Hillary Rodham Clinton's brother Anthony Rodham.
So what do Republicans have to say for themselves?
Following each Democratic death roll, the Republicans are reading the names of Americans who, thanks to guns, are alive today: Shawnra Pence, a mother in Sequim, Wash., to Mr. and Mrs. Stanley Horn, of Cumberland, Tenn.
"We can come up with 2.5 million crimes thwarted every year when someone used a gun in defense of themselves or their property," says Sen. Larry E. Craig, Idaho Republican. "In many cases, armed citizens not only thwarted crime, but they held the suspect until the authorities arrived."
Yet Americans using their Second Amendment rights to save lives isn't news in America. "It isn't hot," Mr. Craig explains.
One day, the senator expects, Democrats will get around to reading the name of Jason McCulley, another unlucky gunshot victim.
"I doubt they will tell you how he died, however, because it doesn't advance their goal of destroying the Second Amendment."
How did he die?
The same couple mentioned before, Mr. and Mrs. Horn of Tennessee, were going about their lives when McCulley broke into their home and tied them up at knife-point, demanding money.
"While Mrs. Horn was directing the robber," says the senator, "Mr. Horn wriggled free from his restraints, retrieved his handgun, shot the intruder, and then called the police."
McCulley subsequently died.
Or, as Mr. Craig puts it: "If some senators on the other side of the aisle had their way, perhaps the Horns would have been killed and Jason McCulley would have walked away."

Our nation is in a frenzy about child victims of gun homicides and accidents. Many people are becoming increasingly shrill in demands for all manner of supposed gun-safety measures. First, let's put the magnitude of accidental gun deaths in perspective. The following are Centers for Disease Control 1997 statistics for types of accidental deaths of children from birth to age 14: drowning (1010), auto (2,608), bicycle (201), pedestrian (675) and gun accidents (142). Gun homicide in the same age group totaled 346.

It turns out that among all the causes of accidental deaths of children, the chances of death by a gun accident are the remotest. That means the benefit of child safety locks might be 142 fewer accidental deaths in 1997.

That's the problem with the anti-gun crowd. It's obvious to any rational thinking person that these liberals don't give a crap about "the children", or saving lives. It's all about being motivated into an hysterical frenzy by those whose real agenda is the formation of a socialist/totalitarian state. "The children" is Clintons' favorite smokescreen for all sort of attempts to usurp more power for themselves, and take away the rights of the "people".

Remember, the liberal (i.e. socialist) bunch really believes all the crap they spout, which points to the only real danger in society today. These people are no different than the religious zealots in Iran and Iraq. Blind faith driven to uncontrolled irrationality by their leaders, to further a carefully hidden political agenda from the intentionally uneducated masses.

Hell, even Khrushchev and Castro's propaganda sounded more believable than the spiel being put forth by these anti gun nuts. There is no way to communicate rational thought to a person in a state of programmed hysteria because in their desperate frenzy to believe their false reality, any information which is contrary to their "programming" is perceived as an attack, which only triggers their defense mechanisms - which in turn increases their level of hysteria. A vicious circle for sure, but one built by design of those who control these "talking heads" ...

Exactly, glad we agree on that.

>The FCC
>can not think like either the general population nor like dedicated
>Hams because the FCC is not one person.

By your same anology, neither the general population nor
dedicated hams ever acts as "one person" either. Indeed,
that is tha fallacy of expecting the basis and purpose of
amateur radio as stated in Part 97.1 to apply and/or be lived
up to by every ham on every point of Part 97.1.

>It is an organization of
>people who are hired or appointed by our government. Our government is
>not one person either. Elections can change those in power. The next
>presidential election, for example, will shake out Janet Reno.

Agreed.

>BUT
>The FCC does enforce Part 97 which contains the BASIS AND PURPOSE and
>the DEFINITION of an Amateur Radio Operator. Of the five paragraphs of
>the BASIS and PURPOSE three paragraphs deal with the TECHNICAL PURPOSE
>OF HAM RADIO.

SO WHAT? Has ANYONE ever been held accountable
by the FCC for failing to meet or live up to any one or

any combination of those stated purposes? Answer = NO.

>This is even more important now that the US is giving
>foreign technicians visas because industries claim that there is a
>shortage of technical people in the USA.

And just what does that have to do with ham radio?
Hams are NOT going to become proficient technicians
to the point where they can land truly technical jobs
based ONLY on self education from being a ham.
One or two exceptions of self taught individuals may
cut against the grain of that statement, but they would
be the exception, not the rule.

>Now I can't say that people
>are motivated by Part 97 to be technical Hams. Most don't read part 97
>BUT the whole culture of Ham Radio is formed by certain assumptions
>which come about by the type of people who are already active Hams.
>Even if they don't build their own radios, they are ceryainly more
>technically alert than the general public.

I agree. The average person can barely connect a stereo
system up to a VCR to play their TV audio through their
stereo.

If we agree on that, then you are saying that those people
that DO become hams and that do set up their own stations
are being technical.

>> >Only those techie types who may be attracted
>> >by the TECHNICAL CHALLENGES that building and operating a Ham station

>and operate properly. This is not exactly something to be sneezed at.

I absolutely agree!!!
Then what is the complaint? What are you expecting?
Indeed, by these statements you DO say that ham radio
IS technical.

>Most Hams can also set up computer systems by following instructions.
>Many people in the general public must have someone connect the cables

>and hold their hands when they install a new store bought PC system and
>accessories. We take for granted that most hams do have some

>Well...I don't go that far. See above.

Good. because to that extent we agree.

>The technical challenge of
>setting up a Ham Station includes more than building radio transceivers.
>Even if a non-Ham was given a working Radio Transceiver he might not be
>able to set up a working Ham Station.

Agree. Your point then is?

>> That is simply not
>> true as the opportunity to be technically challenged (in
>> any way you wish to define technically challenged) is
>> an option anyone can follow at their own choosing.
>> I suspect you are simply disappointed that more hams
>> do not follow that path.
>
>I am not disappointed with reality. My main point is to state that the
>techie types who can now be inspired by the TECHNICAL CHALLENGES of Ham
>Radio are the ones who we must reach if we want the hobby to survive.

I agree also and that is far more doable now that the
FCC has almost ended the code testing. I can make a much
better argument to a fellow engineer to consider ham radio
now that it no longer requires 13 (or higher) wpm tests to
gain access to the bulk of ham HF priviliges.

>They are the ones who can see value in becoming Hams that goes beyond
>mere entertainment. Those seeking entertainment can now get lots of it
>without being Hams....most of them are not interested in the
>technology...but many advanced techie types would rather stick to
>computer technology without getting Ham licenses, as they see Ham Radio
>as old technology.

And who's fault is that? Not the FCC, not the ARRL.
Look in the mirror and there's the problem that needs
to be addressed.

>We can only appeal to such types by proving that
>Ham Radio is progressing into this century and not just depending on
>the Japanese rice-box designers but innovations are still being made by
>such Hams as the members of TAPR and AMSAT....
>and the good Hams in the ARRL lab (I hope).

Many of those TPR and AMSAT hams also rely
heavily on those "rice-box" innovations.
I know of no modern technology or equipment that
doesn't borrow heavily on the work of others
in putting together an end-to-end solution or
a complete product design.

>> >So in that respect Ham Radio has no class

>and that is why they don't want to be Hams unless they decide to be
>TECHNICALLY CHALLENGED!

I still absolutely disagree. The role that hams have
been able to make the MOST of today in the eyes
of the public (and the press and government officials)
is the role we can and do play in extreme emergencies.

>> <SNIP>

>Yep. Please read the THREE PARAGRAPHS out of five that say Ham Radio
>is a TECHNICAL HOBBY.

Been there, done that. You may disagree, but the
basis and purpose is a list of desired goals for the
SERVICE and the FCC has never expected each and every
ham to live up to or meet each and every basis and
purpose.

>> >You can call anyone anything that you want to call them Mark BUT that

>thermodynamics engineer to get burned by thermal runnaways. The first
>people to face technical challenges are the ones who are exposed to
>them. This includs both lab technicians and hobbiests.

Few people even get involved in component level
repairs anymore. The stuff is all built as disposable
or as plug-ins. Repair is not done on a component
level except

>> Indeed, the day will NOT come again when a
>> ham with ONLY an extra class license as his/her

>> technician job.
>
>This depends a lot on the individuals...and if they are respected and
>tested by their qualified peers. If enough Hams can qualify to be
>capable of being prepared to deal with modern technologies...things
>could be different.

I have no problem with that as a concept, but I have
no expectation, nor should there be any that such a level
of technical expertise being attained by any ham would
be reflected simply by the person being a ham, and or holding

any specific ham license.

> If the hobby continues to be dumbed down in a
>useless attemp to attract those who only seek entertainment then you
>are correct. BUT Those seeking only entertainment will not be easily
>attracted anyway...They will not be attracted without Morse code. They
>will not be attracted with easy Q&As. Thus the present outlook of most
>of our present Ham leaders is a gross mistake. This non-technical
>attitude must be changed.

The non-technical attitude is a figment of one's
imagination. The only aspect that has a factual
basis is the reality that ham equipment today is
well beyond the scope of the home brew level...
assuming one wants a compact, complete, multipurpose
and effective rig. Beyond that, there is much that
anyone can pursue to follow specific technical interests.

>Normal people can only be attracted to ham radio if it presents a
>MODERN TECHNICAL CHALLENGE that they are willing to accept...because
>this type of challenge is both fun and of value to THEM.

You offered above that just setting up a ham station
with "appliance" equipment, cabling and antennae is
technical beyond the scope of the average person.

>People who arer foolish enough to becaome hams for entertainment
>purposes only will become disappointed and will not stay active as
>Hams when they learn of more entertaining media.

Nothing new there. The point is and always will be
the people that become hams and stay hams.

Cheers,
Bill K2UNK

This is supposed to be an entry level radio, but the accessory prices on some items are amazing. A CW filter for a 706 is around 75.00 - 100.00. One for the 707 is almost 200.00? The filters have a different IF frequency granted (9.0 Mhz = 706, 455 Khz = 707). Other than greed and the 455 might be somewhat more expensive to manufacture other than greed is there a reason?

Randy

Jeff....a little reality check here.

This is a basic method of control. It's happened time, and time again.

Governments that want a situation to appear a certain way, will do whatever they can to do just that. If the government in Australia doesn't want contradictory news stories showing how badly their decision is working, then those stories never get aired or published.

If you control the media, you control the people. Simple.

Why do you think the liberal media in this country is trying to erode basic American premises?

No proof like first-hand experience. Go live in Australia, and get a good taste of it. Come back to Hawaii, and tell your story. Make sure you don't wince when people want Absolute proof of your claims, but you can't provide it because the Pope, God, and a camera crew weren't handy for witnessing when you were getting f*cked over.

Another pseudo intellectual comparison of non related statistics.
The value of any statistical comparison is in the interpretation of values (numbers) over a significant period of time. A time period of one year is not truly significant. The time period is too short. A one year time period will show a trend, however. This trend is what is significant.
Even if you discount Australia's example, you can see this same 'trend' in any country which has implemented gun control. Now THAT is truly significant, and conclusive.
What the majority of the so called 'liberals/socialists/'do gooders' should do, is come down from their 'ivory towers' and take a good look at the real world. The human animal is a violent one, over 3000 years of history proves that. I think some people have lost sight of the fact that this is not an 'ideal' world, humanity has not reached it's 'ideal' state, and the less than 'ideal' behavior of these less than 'ideal' humans dictates the behavior of the rest of us less than 'ideal' people.
All 'rights' or privileges carry a responsibility. In the case of gun ownership, that responsibility includes intelligent use of a gun, educating and training those near you (meaning family) in the use and NON-use of guns, and acting responsibly. If we all spent more time doing that than 'crusading', we would all be better off.
I have decided that I am primarily responsible for my own, and my families protection. I may share that responsibility with certain agencies, but - I - am primarily the one who has to protect my self from harm. I have that 'right' because of the U.S. Constitution and you do NOT have the right to say I can't. "And dat's the name of that tune!", as some one once said.

The only reason Wolfie keeps his head above water is that wood floats.
Unortunately, Wolfie's head resmbles that of a large turd.

From what I hear, Russians have been doing that for centuries.

The radio is called a "loss leader" in the trade. The real bucks are made in the accessories sold for it.

For example, Polaroid sells their cameras practically at cost because they know the real bucks are in selling the film.

And so it goes.....

Randy my boy, welcome to the world of Icom America!

For Years it has been Icom's policy of selling stripped-down radio
gear, both HF and VHF/UHF. Icom will let you have a bargain
on the base radio, but if you need that Narrow CW Filter, 10-Meter
FM module, "extra-stable" TCXO (is the one they give you first
time around a piece of crap?) or Tone encode/decode board - then
BE PREPARED to pay an obscene inflated price. I made the mistake
of purchasing a IC-28A a number of years back. Turns out the
much required PL tone board was an "Icom Option". It cost me $83.56
from a rather "well-known" ham dealership that runs full-page Ad's in
QST. PC Board had all of one SMT IC on it, plus a few chip-resistors.
It probably cost them no more than $8.00 to build. Buy an Icom radio?
I would rather peruse the local friendly pre-owned automobile dealership
4 miles down the road, they are more honest and reasonable than Icom.

Icom = PHOOEY!

from Newsmax.com
http://www.newsmax.com/showinsidecover.shtml?a=2000/6/7/00224

Wednesday June 7, 2000 12:55 AM EST

Australian Gun Ban Results: Deadly!

Just over a year ago, Australia followed in the footsteps of mother country Great Britain and made law a total ban on hand guns.

The gun ban and confiscation program cost the Australian government more than $500 million. Sometimes using deadly force, authorities there collected 640,381 personal firearms.

And now the results are in: Australia-wide, homicides are up 3.2 percent (in a country that has a low homicide rate).

Australia-wide, assaults are up 8.6 percent.

Australia-wide, armed robberies are up 44 percent (yes, 44 percent).

In the state of Victoria, homicides with firearms are up 300 percent.

Figures over the previous 25 years show a steady decrease in armed robbery with firearms - since the gun ban this has changed for the worse.

There has been a dramatic increase in break-ins and assaults on the elderly.

Australian politicians are on the spot and at a loss to explain how no improvement in "safety" has been observed after such monumental effort and expense was successfully expended in "ridding society of guns."

An e-mail circulating the Web reveals the harmful effects of the Australian gun ban, noting that "you won't see this data on the evening news or hear your governor or members of the state Assembly disseminating this information."

Another Australian offers a warning: "Guns in the hands of honest citizens save lives and property and, yes, gun-control laws only affect the law-abiding citizens. Take note, Californians and other Americans, before it's too late!"

And the _really_ interesting thing is, is that cronies like AF2Y
actually think they're _improving_ things with their narrow scope.

America's new motto:
"He who bullshits the most, wins."

In any other nation on Earth, a man like Clinton would have
involuntarily ingested his 'nads. But that'd be OK. He wouldn't
have "digested".

Sorry Doc....no comparison at all....The difference between the people of 20 and 30's Germany and 2000 America is we have learned from history. We are not ignorant enough to support a known socialist and a world class liar. The boys and girls in Washington should thank their lucky stars that we, the real patriots in this country, don't rise up in mass and throw their collective arse's in the Atlantic ocean.

That is what makes AMERICA great Doc...the people. And the real patriots, the ones that honor and UNDERSTAND the meaning of the Constitution and the BILL of RIGHTS. Not you knee jerk, bleeding heart, Commie liberals. Get over it Doc...you and your kind will soon be nothing but a historical land mark in this countries great march forward. The tide is swinging once again. You and your socialistic ilk will soon be history. You mark MY WORDS.

If you think you and your kind of socialistic misfits can EVER grab our guns, can ever convince us your views are right, can ever again elect to this countries highest office a total opposite of what WE WANT...you can hang that one in the wind. Just bring your socialistic butts down to Alabama and tell us you want our guns...good luck. You think 1861 was bad?

And one more thing.....the "real people" of this country are getting sick and tired of you destroying our youth with your socialistic propaganda. That too will end, and soon. Stand up and be counted people. Lets put an end to this socialistic scourge on our once great land. In NOVEMBER we can SHOW them where we are at. DO IT !!!

And respond here Doc. Not via e-mail. I want this one in the open.

Dan/W4NTI

According to a search at the ARRL site on "reprint"...

You can get a photocopy of any article for $3 ($5 for nonmembers) for
each article requested. Contact the ARRL Technical Secretary
(reprints@arrl.org, 1-860-594-0278) if you wish to get photocopies.

603. eHAM.net to Take Over Elmers Directory

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-09 00:00:00 UTC
From: pschleck@novia.net
Message-ID: <koe05.17453$H7.225573@newscene.newscene.com>
Source record: 109499

Shortly after the announcement of my resignation as maintainer of the Amateur Radio Elmers Resource Directory, I received three offers from qualified people interested in taking over the project. In the end, I was faced with a difficult decision between two finalists. All other factors being equal, I gave the slight edge to a team-based effort at a slightly more established and content-rich ham-radio-related web site.

So, my designated successor as maintainer of the Amateur Radio Elmers Resource Directory is Pat Collins, N8VW, and the team at eHAM.net.

Pat will have announcements regarding specific addresses when they are set up (likely by July), and I will forward elmers-request@novia.net and http://www.novia.net/~pschleck/elmers/ to those addresses at that time. In the meantime, please visit their excellent site at:

http://www.eham.net/

Questions and comments about this transition, or about the Amateur Radio Elmers Resource Directory in general, may be directed to elmers-request@novia.net, which will be automatically forwarded to Pat as well.

Howdy all,
I recently acquired a Signal Crafters Model 30 automatic computing swr/power meter. What I did not get was the remote sensor units or a manual. Does ANYONE have any idea where I can get the info on these units? It is not beyond my capabilities to build them from scratch if I had the plans. Need remotes to cover 6, 2 and 70 for a definate, other bands would be a plus. Also, if anyone has the owners/operating manual, let me know, I would definatly like to get a copy of it.

Thanks in advance

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!
And what good will that do? <Peals of derisive laughter>

And yet again, "wolfie's" impotence comes to the forefront.
Wolfie's limp-dicked responses are a testament to his idiocy.

> Try to be understanding, Milly. He's more to be pitied
> than censured.

Still QRMing on the bands, "wolfie?" Wolfie here has been definately
triangulated as one of the QRMers of the frequency 3.950.
"Wolfie's" got such a bad credit history, even those places that offer
credit cards to those with "bad or no credit" have continually turned
him down.

Dennis all of your pioints are well taken here. I want to add some observations that were made by a committee of experts who recently reported on this subject to the Congress of the US.

The USA has world class engineering schools. They are technically among the most modern in the world. Many of the foreign born engineerrs, who have remained here to work, were educated in US schools. They did not go back to work in their native lands because the opportunities were much better here in the USA.

There is a shortage of people who have taken and passed the required Math and Science courses in US high schools. There are neither enough American people who can qualify for scientific or engineering college degrees nor enough people who are prepared and motivated to do so. There seem to be enough opportunities for Liberal Artists to make people take what they believe is an easier path to wealth here. Many Americans have now been conditioned to believe that only a family where both spouses are employed can leade a middle class existance. Unfortunately this has reduced the motivation for many American individuals to work hard at getting educated.
What saved our technical industries in the past is not only our native born rocket scientist type engineers but our innovative non-degreed super techs, who bring practical know-how to both the engineering labs and the production lines. Many were and are Hams. Today some are self taught computer wizards. It is only recently that schools are starting to try to interest more people in being technologists. Most high schools are not equipped to teach modern technology. Few students want to take optional advanced math, basic chemistry and basic physics courses. Only those who are doing poorly in academic courses have been traditionally steered to vocational courses that are supposed to include electricity or electronics.

We are far behind in education because the teachers who teach the teachers and most academic leaders are teching and promoting only the same stuff that was acceptable 50 years ago. Industrial leaders agree that it is a very slow process to change educational systems. Conventional educational systems change very slowly while the needs of

industry can change very rapidly.

All I have said about Ham Radio is relevent to the need to promote self-study of modern technology, which is absolutely needed for the economic advancement of our nation. We must compete with other nations, whose people are not as lazy as many of our own people have become. We must encourage our own people to work to make those three paragraphs of Part 97 the main goals of the hobby. We must rely on the innovation and the curiosity that can exist in intelligent young people who are the types who will want to meet greater technical challenge in becoming Hams...and in many cases applying their knowledge to practical engineering.
As far as the Part 97 paragraphs that speak of emergency service and international good will...well those are OK but not very unique to ham radio anymore.

In over 45 years as technician, field service engineer, and design engineer I have been able to work at many companies. I started in a U.S. Television factory and I have worked at an airline, at several electronic hardware manufacturers and I have spent some time at every major airframe manufacture in the USA. In addition I have traveled overseas and worked at military bases and visited foreign Hams and foreign factories.
I am now retired and receiving pensions from both Boeing and Grumman. I have seen our industry grow from relays and vacuum tubes to ICs and microprocessors. We are in constant change but there is direction to the change that must not be ignored. We can not follow educational or ham leaders who can only equate the educational needs of today with what their own educational needs or abilities were. We must recognize the worthy assets that Ham Radio has for technical education and let those seeking fun be CBers and computer hackers...because they don't want to be Hams anyway.

Please keep thinking,
Bob Wex w2ilp (Increase License Potential)
BSEE MSEd

Of the many fears expressed about the
information highway is that it will
reduce the time people spend socializing.
--Bill Gates (The Road Ahead)--

People said that TV would stop people
from socializing. Ham Radio lets us
socialize with other Hams. The
information highway may let us
socialize with everybody who will reply
to our posts. This NG has some social
and some anti-social folks posting on
it every day!

jeffreyh@Hawaii.Edu (Jeffrey Herman) wrote:

> Ah, but the "stories" find their way to some web site? How so?

Jeff, lets try some baby steps here.

I can run a website where I can publish just about anything I want, and I don't have an "editor" or "kickbacks" or any political red tape to censor my postings. I can't very well get on TV or published in the newspaper or a magazine very easily. Too many roadblocks and censorship.

What this means is if the media doesn't agree with my point of view, I don't get to use that media. So, yes, it is possible that a website can discuss or present information that the major Australian media can't or won't publish.

I am not saying that this has happened, but I know the mechanics are in place for it TO happen.

> >If you control the media, you control the people. Simple.
>
> I didn't know that all Australian newspapers were government-owned
> and/or government controlled. Let me confirm your claim.

And neither did/do I. However, the media in THIS country certainly isn't politically neutral; therefore, yes, the governmnet in THIS country has some control over what you see/read. Try publishing something in this country that is going against what our government is trying to do, and see what happens.

If you use the web as a medium, at least your position will be in public view initially, and maybe even longer (or permanently, if you host it outside of the US).

The forefathers wanted public control over the government that was set up. This is a basic American premise...to criticize and correct the governing body. Today, if you criticize, you are quick to be censored, or worse.

So, to elaborate on your doubts over whether the web will allow information to be posted that the government has less control of, yes, it is doing just that. But as most people know, they are afraid of this potential. I used to work with encryption, so don't tell me they don't get nervous when they can't see what you are doing.

Read history. If you control the media, you control the people. Simple.

> activities and many people in ham radio, while not up to *your*
technical
> standards, have as much class as any I know.

I have a friend, Howie too. He is Howard Liebman, W2QUV. He is a WW1
vet and active at my Ham VE and commercial CE sessions. He is a real

ham who is an excellent CW operator. He has lots of class in my book...Lots of class in many classes. This classification of individuals has nothing to do with my statement. I said that if Ham Radio is made to evolve in a manner that does not make it primarily an educational technical hobby it will have no class. The restructuring has in fact made it have fewer license classes.

> I do not take exception to your conclusion that technical knowledge is good
> for ham radio, but I do take exception to your conclusion that only what is
> of interest to you is of value to ham radio.

Where did I say that??? ATV is technically good for Ham Radio. I am not interested ion ATV at this time.

> > ...nor is it a any way to attract those who want to make use of efficient
> > communications media. What is left???? Only those techie types who may

> > that he or she could better spend their passtime doing something else.
> > So in that respect Ham Radio has no class but a TECHNICALLY
> > CHALLENGING CLASS.
>
> You have said that the technology of modern amateur radio is not enough.

Ed I never said that it is not enough...but I do think it can not remain stagnent if Hams are (as a goal of Part 97) to try to keep up with the state of the art. Most Hams know a lot more technology that the general public BUT they must be challenged with more and more as technology advances.

> You have said that there are more efficient communications media than ham
> radio. Yet, in the face of that, far more than "only the techie types" have
> been attracted to and are licensed in ham radio. Your premise is flawed,
> therefore so is your conclusion.

Not so.. The techie types may see Ham Radio as a way to use wireless comunication methods that you or I have not yet perceived....or they may not. People who have technical curiosity are attracted to being

Hams...People who do not - generally won't bother. At the present time the Information Highway seems to offer more efficient communication than any Ham bands BUT IMHO that might not stop the techie Ham of the future from developing other communication systems that may have other technical attributes that are of significant technical interest to Hams who can appreciate their technical merits.

> > However we may want to feel that Ham Radio can survive and that it may

> have come close to that, but has never been even at that rudimentary level.

What makes you more qualified than me to make such a statement???

> By the 1970s, technology had increased faster than the exams. To what
> problem in Amateur Radio can you point and be able to link it to the fact
> that the Extra exam has not been, for decades, the equivalent of an
> Associates degree?

This debate is a debate of general attitudes toward the future of Ham Radio. The direction of the restructing is IMHO (based on being both an EE and holding a Masters in Education) greatly flawed. It will color Ham Radio with the wrong crayons as far as asttracting the very types which could be relied on for its survival! It can not attract many new non-technical types for obvious reasons. The attitudes of many Hams who only worried about the Morse exams must now be tasked to consider the impact of emmerging modern technology on the socierty from which ham radio must draw future Hams....not with a Morse filter but with (I hope) a technical challenge.

>
> Bob, many people with a technical interest have always been attracted
to
> Amateur Radio.

I always agreed with that. I assume that you must be one of them Ed.

> They have NOT been attracted to ham radio because of the
> technology in our tests, they have been attracted to ham radio
because the
> rules permit them to explore the parts of that technology that they
find
> interesting.

They would not be filtered away if the tests were more technically
modern and comprehensive.

> The reality of ham radio so far exceeds what could reasonbly
> be on any test that the technologists will come as long as the
potential for
> technology is there for them. I can't fathom why you think the tests
are
> more important than the reality.

The tests are not more important than reality...but the willingness to
take real tests might show that Hams are willing to take real technical
challenges even if they do use store bought xceivers, while non-Hams
can go on, as always, using CB radios and the internet. Thus Ham can
be of a different class than non-Hams. Hams are the only licensed
operators who may if they wish build their own equipment. Let's keep
them in that class....even tho as each new technology evolves the
ability for all to coexist becomes a more complex problem. The darn
electrons must be smart enough to follow ever more complex and diverse
paths and to radiate more signals, interference and noise. Hams thus
must keep getting smarter too.

A man can buy an airplane but not be even a real pilot hobbyist.
A man can buy a yacht but not be even a hobbyist real sailor.
A man can buy a Ham tranceiver and even pass a present Ham exam
and be accepted as a Real Ham...but is that all there should be if Ham
Radio is to survive???

> 73,
> Ed Hare, W1RFI
>
73,
Bob Wex, w2ilp (Increase License Potential)

The dens of modern homes are now going to be called
entertainment centers. Will we learn in our
entertainment centers or will we just be subject to
advertising propagander there. It is up to us as
individuals. Will we select educational hobbies

to escape from our mundane entertainment centers?

Charles, you must learn to control you hatred and stop your slanderous comments about people being white trash, next thing we know is that you will be using the N word. Why would a man of such liberal views make such repugnant comments?

Another thing I meant to mention was the facts about your so-called retirement in 1988. As you know I contacted the State of N.J. and as I mentioned to you the lady said that you had retired from active practice in 1975, this would contradict the claim that you made about retiring in 1988. I am writing the State of N.J. and I plan to set the record straight. These poeople should not make these kinds of mistakes. I will post the results.

622. Maryland Hamfest - 18 June

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-10 00:00:00 UTC
From: windbrkr@erols.com
Message-ID: <MPG.13ac3ae75b264cb198975e@news.erols.com>
Source record: 109291

The Frederick Amateur Radio Club (FARC) presents the annual
Father's Day Hamfest on Sunday, June 18, 2000
from 8:00am to 3:00pm, rain or shine.
(Access for tailgaters opens at 6:00am)

It's at the Frederick County Fairgrounds on East Patrick Street in
historic Frederick, Maryland. Easy access from I-70, I-270, US-15, US-
40, etc. Plenty of parking.

Talk-in on the 147.060(+) MADRA repeater.

We'll have Radios, Electronics, Computers, Acres of Tailgating,
Indoor Commercial Vendors, VE Testing and more.

Good food and refreshments available.

On the web go to http://www.qsl.net/k3erm/ for more info and a map.

General admission is a $5.00 donation.
Tailgating spaces are $5.00 each + general admission
Indoor tables are $10.00 each before June 10th, $15.00 after.

One of the largest and most popular hamfests in the
Baltimore/Washington metro area. Don't miss it!

Questions? E-mail k3erm@qsl.net or direct to me

Thanks & 73,
Bob K9CMR

623. Computer speakers, How to fix RFI??

Has anyone had any success with getting RF out of those crappy computer speakers? You know the ones with a single op amp. A plug-in PS. I have bypassed, shielded, isolated, etc. Even removed ALL leads except for the one short speaker lead and it is still blasted. Also ran on a 9 volt battery. No joy? Anyone out there have any success?

> I have a ranger 2950 dx and a Radio Shack HTX-10.Need help on how to
> modified them for extended frequencies.

HTX-10 has a pre-written microprosser that does not allow for
any "expanded freq" modifications. It's good for 10 Meters
only. (unlike the much sought after Uniden HR-2510 which
may be modified for full 26-30 mHz transmit/receive with the
addition of one 10K resistor.

No longer have my modfile for the Ranger 2950, however go to
www.google.com and do a search on the words "Ranger 2950
Mods" and several pages with the procedure will come up.

Finally, note that if you "mod" the Ranger, you are also responsible for
it's "post-modification" operation. Be aware that FCC DF'ing now uses
differential GPS plotting (military grade) which enables them to
plot your transmitter to within 10 feet anywhere in the USA. Your probably
better off using a modified Ranger in Mexico or Cenrtral America
where you can still get away with it....

Ah, but the "stories" find their way to some web site? How so?

>If you control the media, you control the people. Simple.

I didn't know that all Australian newspapers were government-owned
and/or government controlled. Let me confirm your claim.

Jeff

633. Re: Gun ban results are made up

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-10 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8hs7q4$t82$1@news.hawaii.edu>

No one has addressed my below comments -- what's the source of these "statistics"?

KK7HO <kk7ho@aol.communicate> wrote:
>from Newsmax.com
>http://www.newsmax.com/showinsidecover.shtml?a=2000/6/7/00224
>Australian Gun Ban Results: Deadly!
>Just over a year ago, Australia followed in the footsteps of mother country
>Great Britain and made law a total ban on hand guns.
>The gun ban and confiscation program cost the Australian government more than
>$500 million. Sometimes using deadly force, authorities there collected 640,381
>personal firearms.
>And now the results are in: Australia-wide, homicides are up 3.2 percent (in a
>country that has a low homicide rate).

Their source for this data?

>Australia-wide, assaults are up 8.6 percent.

Source?

>Australia-wide, armed robberies are up 44 percent (yes, 44 percent).

Source?

>In the state of Victoria, homicides with firearms are up 300 percent.

Source? When statistics like this are quoted, a respectable news organization will always cite their source.

>An e-mail circulating the Web reveals the harmful effects of the Australian gun
>ban, noting that "you won't see this data on the evening news ...

One can't help but wonder how this newsmax.com site got the "data" if the Australian news media doesn't have it. If this "data" were really valid, one would think the Aussie news organizations would be beating down the door to get and print it. Why didn't newsmax.com cite their sources for the above "data"?

Dan -

I have a friend who wants to put up either a 20-17-15-10m beam, or some kind of quad. He ran across a reference to Giovannini antennas and asked me to see if I could find some one who had experience with them, particularly their gain. I have looked at their web-site, but it looks like they are far too large for my friend's use. He has a turning radius of about 12 ft., and for that reason is hampered from using the Mosley beams, etc. Thanks for your response.

George, N9EJS

Source record: 109521

I apologize Jeff. I should have been more precise in my comments.
Your animosity in the past towards me is noted and I accept your
animosity in context of you being
a rather angry individual. But I'm envious of your QTH in Hawaii. You would
think that being in Hawaii would mellow you out.

On to the matter at hand.

Mr. Rodney Ansel who's the man the character Crockodile Dundee was
modeled after was shot dead by Australian authorities after Mr. Ansel shot at
police officers who ordered Mr. Ansel to give up his gun which he wore in a
holster. Police fired on Mr. Ansel when Ansel refused to put down his gun.
Again I apologize to all for being lazy and not posting links to the story
but then again, If YOU were not so lazy you could have done a web search and
found this story yourselves.
I'm a voracious reader and scan the newslinks and other information
sources. I remember this story which had a link on the Drudge report.

>You swallow his "story" and will probably pass it on as
>"fact."

>Cite your sources, guys.
>
>Jeff

My uncle who is a reporter for a large newspaper in the Chicago area has
verified this story and there are several links to this story if you do a web
search for "Crockodile Dundee" or "Rodney Ansel".

I guess from now on, anyone including you Jeffery will have to cite sources if
you post anything on this or any other site.

Remember---any government that does not trust you with guns cannot be trusted
itself. Eventually that government will try to kill you.

Learn from history or be doomed to repeat it.

N8WGM

Few climbers own a VHF radio. A 2-way programmable unit is not cheap. A CB is much cheaper. In Canada where it is common to fly into huts by helicopter in winter the VHF is much more useful, and at least one hut requires the group to take one. They can be rented in that area. But Denali is heavily climbed - that would be a lot of rentals.

Also, there may not be many VHF repeaters in the Denali area, limiting the range of these units.

I only acquired the VHF relatively recently after climbing for almost 20 years. And really only because I now guide others.

My, my. Using the term "White Trash". 'Next thing you know,
you'll be using the "N" word. All this from a guy who lives
in a state that leads the country in racial profiling of
traffic stops. I think that the head of the state police
is still fired because of it. Oh well, maybe the B'nai B'rith
allows "White Trash" but not "Nigger".

649. cable modem interference?

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-11 00:00:00 UTC
From: pdenby@my-deja.com
Message-ID: <8i0eat$ki9$1@nnrp1.deja.com>
Source record: 109295

Are cable modems causing interference on ham bands? Or is it just me. I have an S9 20 khz wide dirty signal that is on 24 hrs a day right where I want to operate on 75m! It wanders around to add insult to injury. My portable xistor radio led me to a house that probably uses a cable modem and I believe that is the source of the problem. Does a cable modem produce a carrier all the time? Could it be that the cable ground is missing at that house and could that be the problem? I would like to be armed before I start pointing fingers! If anybody has had trouble like this I'd like to hear about it.
Thanks,
Paul

Did you know that the FCC, in their infinite wisdom, authorized the use
of HF for wireless modem hookups within ones house? They will transmit
a unstable, drifting signal, several kc wide. Sounds like what you got.

Date: 2000-06-12 00:00:00 UTC
From: jamesrhampton@my-deja.com
Message-ID: <8i1gba$a28$1@nnrp1.deja.com>
Source record: 109301

Dan,

A friend of mine, WB2KAO had this problem with his neighbor's computer speakers. He just wrapped a few turns of the speaker wires through a ferrite torroid. Try it, it may work. If you want, e-mail me at j.r.hampton@worldnet.att.net and I'll ask him exactly what he used and pass it on to you. BTW, this is one technique we used when tracking down problems in expensive equipment being qualified for CE mark (equipment to be sold in Europe has to be immune to rf radiation - too bad the FCC doesn't require the same).

73s, Jim AA2QA

ps - if it makes you feel better, I have rf interference to my computer speakers too - as well as my DOORBELL. This only occures if I am within 3 feet of the computer (usually on the internet looking up something for someone on the repeater) or the doorbell. The offending transmitter? An HTX-404 running 1.5 watt 440 FM!

Youngblood is looking desperately for a new liver, or so I hear. He's out of luck on brains.
Maybe he could go to a medical school and see if they will lend or sell him one that's been pickled in formaldehyde, there would be no significant difference to his present situation.

Well you see I am not having trouble with my speakers. I'm having the problem with my neighbor. He just bought a computer and I was tearing up his speakers. I fixed the trouble by letting him use my speakers off of my computer and no RFI at all now.

I am trying to fix his set of speakers. I totally removed ALL external leads and only left a 3 inch wire to the one speaker connected. I even used a battery to supply the op amp chip. Still blasted it out. Bypassed using caps everywhere I could find. Still blasted em out. Oh well.

Source record: 109314

Yep! I got a cable modem and shortly thereafter got all kinds of interference on 75 meters. I started unplugging the cables attached to it and still had the hash. As a last resort I unplugged the brick power supply and all interference dissappeared. The part number of the interferring power supply is AD-715U-2205 made by APS (advanced power solutions .) This is made to connect to the External Motorola Cable Modem. It has a round 5 pin DIN plug and supplies 5Vdc and 12Vdc. Tried at first to wrap aluminum foil around the box but this was not effective. My solution......unplug and toss the old power supply on the shelf. Get a DIN 5 pin plug and connect to your modem and take the other end and go internal to your computer and tap into the unused connectors for additional Hard, floppy drive etc. These will have the exact voltages you are looking for and your supply should be able to handle the additional load. Now the modem will also be switched off when your computer is also. Just a note. My cable modem installer said that eventually they would be switching from the external Motorola to the Toshiba internal card modem. A friend of mine also has the same type of modem I have and he is experiencing interference to his shortwave radio also so I believe mine was not an isolated case. Good Luck!

Now that porkbutt is no longer on ham radio it is certainly a delight not to hear is stupid ass boasting about all of his so-called adventures. The time when he was circling the space shuttle on the Canaveral launch pad in his private plane at 5000 feet and 5 miles out over the water, and the time when he drove to victory in the stock car race with his family auto, and what about all of his stories about his valor in the Dominican Republic. Riley Hollingsworth did everyone in amateur radio a big favor when he shut the door in OTK's face. Poor Richard, those so-called hackers really did a job on him.

671. Re: What is a QRP station at Field Day??

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-12 00:00:00 UTC
From: ac6v <ac6v@ix.netcom.com>
Message-ID: <3944E8C0.EC61AD6F@ix.netcom.com>
Source record: 109317
Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.misc,rec.radio.amateur.policy

David QRP is generally considered to be an output power of 5 Watts or less.

For Field Day Rules see URL:
http://www.arrl.org/contests/announcements/rules-fd.html

4.2. (Class A -- Battery) Club / non-club portable: Club groups (or non-club groups with
three or more licensed amateurs) set up specifically
for Field Day, all contacts must be made
using an output power of 5 Watts or less and the
power source must be something other than
commercial power mains or motor-driven generator
(e.g.: batteries, solar cells, water-driven
generator). Other provisions are the same for regular
Class A.

7.2. Power multipliers: The power multiplier that applies is determined by the highest power
output of any of the transmitters used during the
Field Day operation.

7.2.1. If all contacts are made using a power of
5 Watts or less and if a power source
other than commercial mains or motor-driven
generator is used (batteries, solar cells,
water-driven generator) the power multiplier is
5.

7.2.2. If all contacts are made using a power of
5 Watts or less, but the power source
is from a commercial main or from a motor-driven
generator, the power multiplier is 2.

7.2.3. If any or all contacts are made using an
output power up to 150 Watts or less,
the power multiplier is 2.

7.2.4. If any or all contacts are made using an
output power greater than 150 Watts,
the power multiplier is one.

Reading the entire rules on Field Day at URL:
http://www.arrl.org/contests/announcements/rules-fd.html
Should clarify the QRP issue.

Good Luck

The rule I'm not sure about is whether a battery charged off the mains counts as "Emergency Power". I run a Class E station off a couple of big deep cycle batteries and last year my station was not listed. No, I don't charge the battery during contest hours :-)

Maybe it was my soapbox entry where I bitched about not allowing 146.52 as a legit frequency. Some geezer probably threw it straight into the trash when I dared challenge the ARRL's all-powerful contest rules :^ Sheesh, all the high-power multi-op clubs run 146.52. Then they have to QSY because frequency cops make a complete mess jamming the channel with obscenities and packet transmissions. Out here on the W coast, 146.52 is stone dead every other day of the year except for the odd bozo whistling into his microphone to test his rig.

Four watts from the CW transceiver of an Extra class ham would be QRP.

Four watts from the CB radio of a restructured ham wouldn't be QRP.

11 meter band field day contacts should be written on the ARRL F.D. entry form where it says "other band". 11 meter stations exchange, CB brand, the cost of your echo-mic, in dollars; and the number of days since April 15th you've been a ham.

After installing my TM-D700A in my 1997 SW1 Saturn, I can also report
that there is a popping noise (that changes with engine speed) on 2
meter. For now, I have not heard it on UHF but I mainly use my radio
on 2 meters for the moment.

I truned off the ignition with the radio still on and then I could
hear the fuel pump for a few seconds. But it was very faint so I wont
bother with this one for now. As far as the popping noise is
concerned, I guess I'll have to buy a filter as this one is annoying.

So if it is really a popping sound, I should go with the ignition
system right filter ?

Stay safe !

They don't keep instructions on hand because they're so amazed someone
would be so stupid as to buy that overpriced amp. You can get a no
tune top of the line amp for what that cost.

OK....for starts please send your reply directly to me at VE7LWB@rac.ca
and
" NOT " to the address of NO_SPAM@NO.SPAM.com

Here is the question. Lets say I have two 4 element yagis, and lets say
that each
give a gain of 10 dbd on UHF. Now if I co-phase them the gain will not be
20 dbd
that much I know all to well, but how much extra gain will the second
antenna give
to the one that is there. I am not sure, but something tells me the gain
increase
would be in the order of 2db making the two 4 element yagis give me 12 dbd.
I THINK ???

Can someone give me a clear ansewer to this question?

Also, if I would use 4 of them all co-phased, would the db gain go in
steps or would
it what ??????

And last part of this question. How many antennas could I co-phase
together
before the law of deminishing returns would step into play here.

And please don't tell me it's in the ARRL handbook. I already looked and
can
not find what I need, so don't even go there.

Please reply directly to me at VE7LWB@rac.ca Thanks......

.

A reason ham radio is declining is learning the code, and putting together a station is hard work compared to the ease of buying a computer and joining an internet chat room.

In some respects, the code is like learning a foreign language, and even though there are only a few dozen characters, somepeopleseemtosendcomletesentenceswithoutspacessoifyoumissaletteritmightbehardtofigureoutwheretopickitupagain.
O th er p e op leputp aus es in th e wro ngpl aces,m akingi t toughert o figu reo ut lettersyo umis s e d.

Some people are just better than others at learning languages.

While a no code license exists, it's more limited, and holders of that class of license seem to be looked at as second class citizens by some hams.

I don't think the theory is as much of a deterrent because people who are interested in ham radio are often interested in experimenting. They see a use for it.

Perhaps a compromise could be worked out so people who didn't want to learn the code would need to show greater understanding of theory for a given class of license.

But until the folks who earned their licenses the hard way decide the code is less important than getting more people involved in the hobby, little will change.

It doesn't matter how far you can send a message with 1 watt if nobody is listening.

The post is begging the question. Just because standards change to attract new operators, it does not follow that the new lot of operators are less intelligent and needed the chage in standards to pass the ham tests as they were.

There are many competing forms of communication that appeal to the pool of potential hams. Change may draw some into the hobby who otherwise would not take a second look.

I don't think it's about intelligence - rather about
committment.

Also, HAM radio used to have certain traditions. Many
say they went down the drain [even before this last
restructuring]. Still, Morse is/was a part of that
"tradition package".

Thus unwillingness to spend efforts to master Morse to
a reasonable degree (a few wpm) is considered by some
as an ample evidence that the candidate doesn't care
to make himself conformant to the existing framework
and might agree to join if the framework were to be
made conformant to him.

This of course is evidenced in many areas of life -
religion, for example...

> There are many competing forms of communication that
> appeal to the pool of potential hams.

Which do not require licensing, formalitites, etc. Which
have MUCH lower entry-level bar in both knowledge and cost.
Which are more convenient to use, offer much more "features",
and are more reliable/predictable. Which have practically no
restriction on the communications contents... Need I go on?

I don't think radio can compete there. The only possible
newcomer (IMHO) is either somebody who likes tinkering
with radio equipment, or somebody who really wants to
"work the waves" himself...

> Change may draw some into the hobby who otherwise would
> not take a second look.

I don't mind sharing the 'waves with somebody who hasn't
passed through the tests as "rigorous" as those I had to,
but I doubt that "easing the entry" will bring that big a
swell to our ranks...

Let's see how it all develops...

The term "occult" means 'to hide' (as in hiding the disk of the
sun) or 'hidden' (as in occult or hidden knowledge) hence the
duel use of the word. The moon routinely occults (eclipses) stars
and planets as it orbits the Earth. Such events are known as
'occultations'.

<tangental soapbox rant>
Religious types seem to obsess WAY too much on satan (it almost
boarders on worship in itself). Not all occult knowlege is
satanic -- in fact, if you go forth with an open mind, you will
find MOST occult knowledge is NOT 'satanic'. But fear is the mind
killer and many preachers and polititions will use fear against
the masses as a very effective means of thought control. I better
end this here. If the religious types don't accuse me of being
'satanic' the non-religious types will probably call me a
'crackpot'for giving occult knowledge any credence whatsoever. :)

Has anyone running an Icom 706 MKIIG mobile with a High Sierra
Screwdriver antenna have had any RF feedback problems of shutting off
the radio
or causing it to change frequency when running the OPC 581 separation
cable.

If I reduce the power output say 15 watts or less it works ok, or if the

head is directly attached to the radio it's ok also.

It is hooked up in a 1998 Plymouth Voyager

RF is getting into the unit thru the separation cable and you would
think it would be
shielded very well.

any info would be appreciated.

707. AF2Y: on TV

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-13 00:00:00 UTC
From: "radiosigs@mindspring.com" <radiosigs@mindspring.com>
Message-ID: <8i6koo$9di$1@slb2.atl.mindspring.net>
Source record: 109154

Last night President -to-be Albert Gore was on cable addressing a woman's group. I said addressing, not undressing, you dirty minded clowns.
All I can say is that you "Bushy Wushies" are going to see your Texass hero butchered in the debates, that is if he has the cojones to go against Al. Veep Gore is brilliant, very well-informed and will prove to be an A1 master debater. And no wisecracks either.

He stressed PRO-CHOICE which of course is the American way because that's what democracy is all about-CHOICE!! We want no two- bit evangelical phonies dictating anything, pushing anything down our throats based on New Testament writings which were taken from the Old Testament anyway. Let them keep their preposterous sermons and demands for the doofusses who shell out "LOVE OFFERINGS" for the damn fool charlatans who's going to get them into heaven. Yeah right! Furthermore they have no place in politics anyway. Gore is a PEOPLE'S CANDIDATE rather than a slimeball Republican hack who'll cater to big business and he's the last guy in the world to take crap from slugs like Falwell, Robertson and other creepos.

I don't care if the polls on June 13th show Bush in the lead; he's gonna get his butt kicked by the Gentleman from Tennessee. Wait and see what happens once the campaigning starts and all of you who now lean toward George W. will do a 180. Why?

Remember that the debates signal understanding or avoiding the issues and after watching Gov. Bush, you will say HELLO? In no way should you equate Al's morality and ethics to those of his predecessor's because 'taint so. Although Clinton was an extremely effective Prez. DOMESTICALLY, he still was the chief sleaze of all time to ever sit in the Oval Office but Al will prove himself upright, honest, morally perfect, kind, understanding, progressive and of great leadership character.

I implore you "Bushwackers" to come over to the side of dignity and correctness and vote for Al Gore. Keep America growing!
Doc,AF2Y

The gain would increase by 3 db, so you were close. If you put up a second pair for a total of four, the second pair would give you an additional 3 db for a total of 6 db over the single. The next three db would cost you four more, etc.

>OTK is the biggest liar next to AF2Y that I've ever heard

Wait a minute .. do you refer to the Radiosigs-Guy? Puhleeease .. give him credit. Ok so he's a fan of The Amazing AlGore, but at least the Radiosigs-Guy never claimed to have invented the internet or tobacco litigation, etc.

Now you gotta tell us, why do you call him a big liar? Well ?? We want to know.

I maintain that he's simply a very effective agent provocateur. Frankly, I believe the Radiosigs-Guy will turn out more taxpayer votes this November than Rush, Neil Boortz and Michael Reagan combined. Just wait and see.

Only the FCC knows that---but the cancellation reportedly was for
failure to appear for a retest, so one might reasonably conclude that
there was some question about the validity or integrity of testing for
the original license. It's also possible that the Spanish was a factor
with respect to the failure to ID in English which I personally noticed
more than once with these operators.

>Why do you think the liberal media in this country is trying to erode
>basic American premises?

Let's review: Statistics claiming that Australia's gun ban is
not working appear on some obscure web site and no references
for the statistics are cited. I ask why such statistics haven't
appeared in the Australian media; you and others claim that
their government controls their media to such an extent that
such items can be prevented from being published.

Let's hear from some Australian hams regarding your claim:

From doormatt@NOSPAMbigpond.com Mon Jun 12 12:59:11 HST 2000
It is the other way around, Australia's media controls the government, it
is amazing how much the government and the populace in general are
controlled by the media.
To your main request - There are a lot of different media groups but in
reality only a couple of companies control them - Fairfax and some other
company (Newscorp?? from memory). We also have a government group - the ABC
(Australian Broadcasting Corporation) which whilst government run does not
usually spout the government line. In addition we have the SBS (Special
Broadcasting Service) which whilst financially supported predominately by
the government operates without much government interference.

From j0e_blow_aust@yahoo.com Mon Jun 12 13:00:13 HST 2000
A quick answer to Jeff's question is that there is no control over the
media by the government.
As Matt said, even the government owned Australian Broadcasting
Commission media division is independent of governmental interference.

Their responses cast doubt upon the validity of those web page
statistics; if those numbers were true, the media would have jumped
on them.

>No proof like first-hand experience. Go live in Australia, and get
>a good taste of it. Come back to Hawaii, and tell your story.

No need -- I can send queries to Aussies, instead. Cheaper that way!

Dang! Maybe the ferrite toroids would help. Does it occur when you're
NOT running your amplifier?
That's the trouble with those less expensive speakers...they pick up
RFI like a magnet.

With the heavy emphasis on enforcement, and sice he was contacted by
Riley to quit reading credit and police reports over amateur radio,
(Which was varified in QST, btw)it's doubtful that even Youngblood
would risk his license to do a roll call.

Anyone can set up a web page and it's quite easy to present opinions disguised as "facts," such as providing some gun-related statistics without citing any references. But you're not answering my question: How did those statistics get on someone's web site -- where'd they get them from? If the Australian government wants such numbers hidden, how did that web site gain access to them? Why didn't you answer my question instead of going off on some tangent?

>What this means is if the media doesn't agree with my point of view, I
>don't get to use that media. So, yes, it is possible that a website can
>discuss or present information that the major Australian media can't or
>won't publish.

The Australian media is very critical of the government and is in no way controlled by the government (according to responses I received from some Aussie hams). If those gun-related statistics were true (no sources were cited), the Australian media would have jumped on them.

>If you use the web as a medium, at least your position will be in public
>view initially, and maybe even longer (or permanently, if you host it
>outside of the US).

We're discussing those gun-related statistics which appeared, not someone's viewpoint. And you never answered my question: How did those statistics get on someone's web site -- where'd they get them from? If the Australian government wants such numbers hidden, how did that web site gain access to them?

>So, to elaborate on your doubts over whether the web will allow
>information to be posted that the government has less control of, yes,
>it is doing just that.

I don't know where that came from. I have no doubt that anyone can say anything on their web pages. My question was: How did that web site get those statistics, and if the numbers are true, why wouldn't

the Australian media have published them? That media is highly critical of the government, and their government has absolutely no control over what's published, as per responses from Australian hams.

>Read history. If you control the media, you control the people. Simple.

Once again, the Australian government has absolutely no control over its media as per the responses I've received from Australia.

I don't see how torroids would help, since I removed ALL LEADS from the pc board. Perhaps the op amp is so sensitive they would help. I'll give it a shot.

And they respond from basically 7 mhz to 146mhz. At least when in my shack. At the neighbors I did not bother them on 75 with/without the amp. (600 watts). But wiped them on hi power on 20ssb and slightly on 20 with low power. Of course in the shack its wipe out city on any band.

Source record: 109252
Cross-posted to: alt.radio.amateur.club.clarc,alt.radio.amateur.club.taparc,aus.radio.amateur.misc,aus.radio.amateur.wicen,rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space

Simple, two 10 DB antennas cophased will give you an overall gain of 13 DB. Four 10 DB antennas cophased will give you an overall gain of 16 DB. Eight 10 DB antennas cophased will give you an overll gain of 19 DB. Basically everytime you double the amount of antennas your gain goes up by 3 DB - theoretically anyway. However each time you are putting a splitter (for more antennas) into the feedline you are increasing the loss factor. There is no set limit to the amount of gain that you will be able to achieve but I have not seen to many go past 16 beams - the EME crowd do go for more but the amount of money it would cost makes it prohibitive for most of us to do this. For 2M and 70cm most people don't normally go for more than 4 beams - indeed most will stick at one or maybe two. Hope this helps you out.

Cheers

Matt

3dB is double the power. In general, if you double your antenna system,
you approximately double your gain so two properly phased 10 dBd antennas
yield about 13 dBd gain.

>If the Australian government wants such numbers hidden, how did that
>web site gain access to them? Why didn't you answer my question
>instead of going off on some tangent?

Well, because the "question" was vague.
>Ah, but the "stories" find their way to some web site? How so?

Is not the same clarity as:
>How did those statistics get on someone's web site -- where'd they get
>them from? If the Australian government wants such numbers hidden, how
>did that web site gain access to them?

Ask a vague question, I'm sure you'll get lots of differing
interpretations and "tangents".

I also stated:
>I am not saying that this has happened, but I know the mechanics are in
>place for it TO happen.

I did not make the original statement leading to your question. What I
was trying to convey is that information gets twisted, folded, stapled,
mutilated, punctured, and all sorts of other ??????eds, especially when
delaing with money, power, and or greed.

Forget boiling down and "processing" the miniscule facts. Want the
Truth? Go ask the folks that are the victims and survivors of the gun
violence duing pre-ban, and then ask those who became victims during the
post-ban. The Australian government would never do this, even though it
would be close to 100% accurate information.

I don't have all the answers, but I do see the gun issue as one where
some people want to throw the baby out with the bath water.

Compile all the stats on kid's deaths via handguns. Compile all the
other stats on kid's deaths. I think you'll find that the gun-related
deaths ARE sensationalized by the media, which is helping pave the way
to our current Presidents (both of them) agendas.

Like the modular Linux kernel, some people think our Constitution can
just dynamically load/unload whatever is most convenient at that moment.

If this doesn't scare the Holy Shiite out of you, I am even more in fear
of America's future.

> The Australian media is very critical of the government and is in no
> way controlled by the government (according to responses I received
> from some Aussie hams). If those gun-related statistics were true
> (no sources were cited), the Australian media would have jumped on
> them.

Maybe so. But ask the victims, not the hams.

Again, you said:
>>I didn't know that all Australian newspapers were government-owned
>>and/or government controlled. Let me confirm your claim.
I said:
>And neither did/do I.

Straight to the source:
Go ask the folks that are the victims and survivors of the gun violence
duing pre-ban, and then ask those who became victims during the
post-ban.

Not some Aussie ham, or media person, or me. Only the victims and
survivors of those killed have the real information.

I have an ft-101ex I would love to sell or trade. I don't know what it is worth, the AM recieve is a little low, and the transmit power is a little low, but I think that is nothing big, i think anyone who knows the radio can fix it easy. I would like to trade, possibly with cash for a radio I might be able to use for a backup rig, maybe even something else with minor problem/s If interested, email me at n1umj@mediaone.net thanks, and 73
John

You're right! We need to substitute Latin for Morse. It too is a practically dead language, practiced only by hobbyists and religious sects, but Latin is far harder to learn than morse, ensuring not only empty spectrum but that everyone you meet is intelligent. We could have two classes, an entry level requiring only the ability to translate Ceasar's Gallic Wars, plus a "general" class for those who can speak and write Latin as proficiently as the Pope. Best of all, beginners would only be allowed to transmit Latin on UHF whilst those who'd demo'd papal proficiency would be allowed to QSO in English on any band! Sound like a plan?

Well stupid, if you didn't know, posting your straight e-mail address on the internet is not a good thing.
You might think its "Manly" and "the right thing to do" but you are subjecting yourself to spam programs
which explains why you keep getting junk mail and subscriptions to porn sites in your e-mail box.
Also, when you make a comment you are allowing people to respond by sending you e-mail.
Most people on the internet, don't deserve the toilet water they consume less deserve my e-mail address, less the right
to give their opinion in my sacred e-mail box.
Don't EVER knock people for not using their real e-mail address or using a handle. You have to as newsgroups are the EQ
of CB not HAM to begin with and you wouldn't give your personal info to CB'ers would you?

Why not? Everybody isn't out to 'get you', and for those few
who really think it's funny to 'subscribe' you to junk mail, etc,
there is a cure. It isn't the most simple thing in the world, but
it can be cured. And usually, 'that' person won't ever bother you
again. I say 'usually' because some people really are that stupid.

David, could be that we've got ol' Rog' all wrong. He's got
one kid of which he's particularly proud. Seems that he's
got a bumper sticker on his '76 Toyota pick-up. To wit:
"My child is an honor student at the West Virginia reformatory".
In the same vein, 'saw on the news about N. J., especially
Newark, being the car theft capital of North America. Really
need to get some guns up that way so that they can defend
themselves. The JDL (Jewish Defence League) seems to be
doing a very poor job of it. daf2y is always quiet when the
bad news is in N. J. 73 Wolfie, aka the gangsta of love,
aka the 75 Meter Mirage.

I upgraded from Advanced to Extra on April 25 using a CSCE from April
9. I did obtain a 1X3 vanity call on May 16 which shouldn't affect
the upgrade. Still watching the ULS page for my upgrade to show up.

I would be willing to bet that most of these so-called "children" are
actually gang members fighting over turf and drugs. As far as I'm
concerned they can all shoot themselves dead.

This coming Sunday....

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday June 18th 2000
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23-W1BOS/R and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)

Harvard Wireless Club (W1AF)

Hello!

Sorry for the beginnners question,

I just bought a 6m/2m/70cm Cushcraft Yagi antenna, and as I was putting it together, I read that the lead for the 2m and 70cm has to be connected to both, in order remain balanced. This would lead me to assume that the 6m lead comes in on a separate cable? I was looking at buying an IC 746 transceiver, which doesn't have 70cm. Does the VHF output on the IC 746 include both the 6m and 2m on one line, or are the 2 bands separated? If it does output both on one line, how do I resolve

that at the antenna.

Thanks!

Andrew

I won't settle for anything less than the NCEE Electrical Engineer P.E.
exam for the Extra, with at least 30 wpm of code. (More is better isn't
it?) And, unlike professional engineer state licensing, LET'S MAKE EM
RETAKE EVERY 10 YEARS TO KEEP THEIR LICENSE. And, oh yeah, the State
P.E. passing grade is a paltry 75%, curved. Let's make sure we only get
the best of the best, and set passing at 100%.

In only a decade, the ham population of the U.S. should be maybe 2, or
3. Now, if they just had someone to talk to. I'm sure there's a few
JY1 types out there who didn't test at all, but just declared themselves

a ham.

It sounds tough, but one must prove their excellence to access a public airwave, shouldn't they? Just like broadcasters? :)

First let me start off by stating that I am a lowly Technician class radio amateur. I have been licensed for nearly two years and I have enjoyed the bands that I have access to. When I was beginning to become interested in ham radio , I wanted to "work the world" and do some dx. The fcc amateur restructuring has made zero difference in my particular situation. I still need to master 5 wpm to gain access to the hf bands and I still intend to do so. Do I have a problem with increasing difficulty to get more privileges? Yes and No...I do feel that you shouldn't get "something for nothing" and just get a license. However, why is morse code the "chosen mode" for gaining a higher license? There are many modes to operate in amateur radio and simply being proficient at sending and receiving code, doesn't make you a good ham operator. 5 wpm is adequate in my opinion because if you are interested in operating cw and/or qrp , you will get more proficient with cw due to experience. The "die hard" hams out there are so concerned with degradation of the bands...What do they care? All of the of the hams that don't use code, won't be hurting or bothering their precious code allocated portions of the band. The other question that I have...How many of these "die hard" hams are actively involved in their local ham club and community? I can tell you that the club I belong to has about 70 members and most of which are advanced or extra class operators. At the last meeting, I brought up an upcoming event in the community that needs about 6 folks from our group for communications for the event. The same lowly-classed hams like myself were the only ones that were willing to help. All I needed were six out of the 70...SAD!!!!!! The other sad fact is its always the same 3 or 4 active guys in the club that do 90% of the work. I think this is typical of most clubs everywhere and this is where the REAL problem is in ham radio. I guess the higher-classed guys that are code proficient are too busy working cw to help the community, the club, or a new ham...

I can't say for sure; there is a Jack Gerritsen in California listed in QRZ.COM but whether he is the individual or not, I don't know. It is really sad, there used to be a FEW individuals (such as Mike, W2OY) who enjoyed jamming other hams, but now, some hams, some CBers, and some unlicensed individuals think that they can do whatever they want. When I went to college, one guy had a CB set which he used to taunt the local police (NOT a good idea). He was caught, and the charges were dropped - with the understanding that he was done at that school and we not to come back to the town. That was pretty big time then, but now we have the 3, 5, and more kilowatt characters as well as the jerks who think 'fun' is jamming the police frequencies. I wonder what the 22nd century will bring?

That is pretty good Old Biker. But it doesn't go far enough, as Latin actually has some utility. I suggest we go with Celtic, as it is MORE like "Morris" code in that it has absolutely NO utility in today's world. Those that passed the Extra examination would be given the privilege to converse in Gaelic on the HF bands. Novices would be given the "opportunity" to converse in Assyrian ONLY on 28.100Mhz, until they built up their dead language skills - those filthy, whining novices!

Yipes! There are wireless modems operating near 75 meters nowadays. There are also poorly made devices which may radiate. One thing is for sure, where a device radiates, it is also SUSCEPTABLE to radiation. You can try the kind approach; if that fails, get an antenna designed to put as much radiation as possible as close as possible to the area causing interference. Then, fire up with as many watts as you can muster. You can try SSB or AM. It is very likely you will cause a problem with the offending unit. I know. We destroyed a monitor with 3 V/M at 210 MHz with 30% AM modulation.

Yes, it takes a lot of work for them to drag their feet for so long.

BTW, not all of them are so pig-headed. But many of them are - and it is only thru attrition of their numbers, due to advancing age, that change has finally been possible. Up until restructuring, the number of licensed General class hams had been declining at an ever more rapid rate over the last 3 years. But there are STILL a lot of bitter, old coots out there. However, on this newsgroup, the more vocal "Morris" code pundants are mostly only about 45-55 years old, and we should have them to "kick around" for a long time to come!

Good luck with your Amateur activities.

Hey!

You didn't answer his accusation that you are a coward.

Coward! ... or are you just paranoid?

Get some backbone, and identify yourself, otherwise quit posting.
Unidentified posters are non-entities - non-human, if you will. They
deserved to be FLAMED with "stick your hot soldering iron in your ear"
statements - as they are ghosts, you can't hurt them! For all we know
they(and you) are an e-bot - a TRUE non-human - a computer program that
runs wild on the newsgroups, bantering over NOTHING!

You cowardly e-bot! You are nothing more than spam!

You are a non-entity - a spectre of the net.

782. Upgrades via the GLAARG VEC

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-14 00:00:00 UTC
From: "D. Stussy" <kd6lvw@bde-arc.ampr.org>
Message-ID: <Pine.LNX.4.10.10006140016380.174-100000@mbx.bde-arc.ampr.org>
Source record: 109166

If anyone is still waiting for upgrades submitted via this VEC, I may have some news for you:

In response to an inquiry I made regarding my own upgrade, I found that GLAARG is having some problems in getting data into the FCC's computers via electronic filing. Some of the problems are on the FCC's end. However, this means that for some sessions, some data went through but other data didn't - which results in some people attending a session receiving their upgrades and others not (yet). The problem is being worked on.

It's possible that other VEC's are also having electronic submission problems, in addition to the post-restructuring increase in the work load.....

Good post (as usual) Radiosigs-Guy. Glad to hear that The Amazing AlBore stressed pro-choice .. I hope he stressed gun control and higher taxes on the middle class, too. All are great ideas. As democratic as welfare and food stamps.
Whatever it takes to get taxpayers to the polls this November. The more AlBore pushes the KommieKrat agenda, the more it will irritate the taxpayer vote. Now if the taxpayers will just get off of dead center and go vote this November.

I'd like to see The Amazing AlBore get the biggest wax job since the KommieKrat George McGovern got his in '72.

Ok, taxpayers. The gauntlet is down. Where do we go from here? Are we going to stay home and let the parasites elect the "inventor of the internet" as our next intern molester, or are we going to turn out and do the right thing? Think about it. Think hard.

Thanks again, Radiosigs-Guy. Rush should pay you big bucks to teach him how to turn out the voters. With Rush on our "team", we lost 2 in a row.

This time, we'll take it back, and we'll have Radiosigs-Guy to thank for it. Maybe President Bush will appoint Radiosigs-Guy to his cabinet. Secretary of Taxpayer Mobilization. Chairman of the Y2K Republican Landslide. Who cares, as long as he remembers "who brung him to the dance".

Keep 'em coming, Radiosigs-Guy. Single-handed, you're going to send The Amazing AlBore and Queen Hillary back to the farm.

Leave it to Charlie to point out the less than obvious observations. The debates, ahh yes, with algore as a participant they should be labeled "Truth or Consequences." If you think he's ever telling the truth you'll surely suffer the consequences. You'll have to listen, you see algore has determined that "there is no controlling legal authority" for lying.
Remember folks, we need leader not a liar. Besides, algore, klintoon and billary may just be indicted after the race. You remeber don't you? Campaign fundraising. Might be kinda hard for him to govern from Rikers Island. LOL

Not me,
Your opinion is worth as much as the name you sign to it. I'm willing to sign my name to what I say, and stand up like a man for what I say. If you were signing your name you might not make rude, lewd, obnoxious, derogatory, specious comments. If I get spam, I report it to the IP, same with porn. And my email address, while valid, is not my working address. I'm not stupid, I have a free Juno email address for newsgroup posts. My postings are items I wouldn't have any problem saying on a radio to another Ham. I wonder, which is more representative of you, the way you talk on your ham rig, or the way you write on the Internet. I try to use manners both places, it's the way I was brought up.
BTW, I've read a lot more trash on the ham newsgroups that I ever heard on CB radio, and I've had one of those since 1970. This looks more like 14.313 than 27.185. And yes, I've given my personal info to Cbers, made some good friends that way.

Mark K5MAR (ex KDW-1411)
And proud of both.

"Not me" <@.> wrote in message

which explains why you keep getting junk mail and subscriptions to porn sites in your e-mail box.
Also, when you make a comment you are allowing people to respond by sending you e-mail.
Most people on the internet, don't deserve the toilet water they consume less deserve my e-mail address, less the right
to give their opinion in my sacred e-mail box.
Don't EVER knock people for not using their real e-mail address or using a handle. You have to as newsgroups are the EQ
of CB not HAM to begin with and you wouldn't give your personal info to CB'ers would you?

We are providing the Technician, General and Extra exams, along with several other categories.

http://www.webexams.com

It is free. We are not charging or requiring e-mail addresses.

You can take predefined or randomly generated tests, design your own tests, browse through questions and answers, have exams and questions emailed to you, and more. Exams can be timed or open-ended, and you can pause or suspend exams as interruptions occur. You can track your progress, and focus on your own weak areas, all free of charge.

Visitors to the site have told us it is very helpful in preparing for the radio exams, and a fantastic confidence builder.

We are very excited about providing this free, the way we think it should be, and would love to have feedback on how to improve the work we have done. In addition, if there are other exams you would like to see up, please let us know!

Dave

Vern, have you checked to see if your license has shown any
change in the databases available on the net? For instance, the
QRZ database shows your license as having an effective date of
16 May 2000, and shows that you're Advanced class. Did you
upgrade to Extra after the 15th of April, or is the Advanced an
upgrade you did before that date?

Sounds like foldback... I had a similiar problem with a Daiwa meter I was using to monitor output and VSWR on my 706MKII a while back. It had a less than optimum input to the meter, and only after spending quite a bit of time on other parts of the feedline/antenna system did I check the VSWR reading that I got from the meter inside the radio. It was VERY high, despite the outboard meter showing the rest of the feedline/antenna being tuned. What reminds me of this with your situation is that the VSWR reading on the radio didn't look bad at low power, but if I cranked it up and modulated, the VSWR meter inside the radio started looking like the outboard power meter!

Which, in the clarity of daylight, renders the truth apparent that
the ignorant are just a little less than invincible.

Probably both. You know, Doc, I looked up the perfect word for this
"wolfie." "Feigele." It suits him rather well. I don't think he caould
pass the No-Code Technician license, that's why he doesn't put his call
sign out here.
I hope to go to Cadiz, OH soon and see if I can file a complaint or
two. Maybe the licensing body in OH would like to hear about a certain
somebody who's deserving of being stripped of their business "license",
etc.
Maybe I'll check with the certain people in MN, GA and AL, too.
ho ho ho ho...

Rog'! You're back! Saw daf2y duck on the board today. He's
got to be proud of your command of the language. 'Had so
much fun with you two that I'm thinking of starting a regular
post about you guys. I'll call it Raincoat (af2y) and Roger
(kc8jbo).
Raincoat and Roger
or, actually heard on the bands

Roger: Wuz lukkin in the fone book.
Raincoat: Zatta fak?
Roger: Jever see how many Smiths are in there?
Raincoat: Reckon
Roger: Whyzat?
Raincoat: Guess cuz they all got fones.

The rest of you guys let me know if you'd like a regular
series about the two "Boobs on the Bands".

829. Morse exercises No.27

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-14 00:00:00 UTC
From: DTC - Frank Schmitte <dtc@muenster.de>
Message-ID: <8i8753svv1@news.citykom.de>
Source record: 109213
Cross-posted to: alabama.birmingham.radio.amateur,nl.radio.amateur,rec.radio.amateur.misc,uk.radio.amateur

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr27_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr27_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr27_45.mid

Speed "25" (= 5 wpm): http://www.muenster.de/~dtc/nr27_25.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

73 es agbp de Frank (DL1YDL), DL-CW-C #030
Editor of the DTC-Web-Site.

Rosie vs. Reality: What Every Woman Must Know

By Richard W. Stevens

Suppose a Hollywood star or a political figure publicly announced that he or she favored making all women and families helpless and defenseless against vicious thugs. Would women cheer and vow their undying support for that person?

Yet if you believe the published polls and the media news showmen, then it's true: women actually want to be defenseless. Many women don't want to be able to protect themselves or their families from crazies, druggies, violent ex-boyfriends, rapists, home invaders and stalkers. What's more, these women want to prevent other women from protecting themselves, too.

When some women say they want more "gun control," they are actually saying they want to make it harder for peace-loving women to obtain personal and home defense tools. All current and proposed "gun laws" work to discourage firearm ownership. Except for the shall-issue concealed carry rules in some states, none of the "gun laws" does anything to help an endangered woman obtain a firearm and learn how best to use it for self-defense.

Facts About Self-Defense

For the woman who values the safety of herself and her family, a firearm can be literally a lifesaver. Here are the facts:

Americans use firearms to protect themselves over 5,000 times per day -- that's over 3 defensive uses every minute.

Over 500 women use firearms to defend themselves against sexual assault or abuse each day -- that's one woman protected every 3 minutes.

In over 92% of defensive gun use cases, the victim brandished the firearm arm or fired a warning shot only -- no wounding or killing was involved.

Research has shown it is safer to defend against violent attack using a firearm than to resist with other means such as wielding knives, hitting back, or running away.

National Safety Council data for 1995 show the number of accidental deaths involving firearms misuse are far less than those resulting from accidents involving falls, poison, drowning and fires. This is especially true for children age 14 and under.

Regional and national studies confirm that criminals avoid targets (men, women, homes, buildings) where the potential victims might be armed.

Bottom line: Armed citizens are safer.

Facts About Government-ordered Protection

What can the anti-self defense lobby and the government offer to protect women? Let's check the options:

Dial 911 / call police

(1) Police have no legal duty to respond and prevent crime or protect the victim

(2) 95% of the time police arrive too late to prevent a crime or arrest the suspect

Cell phone 911

(1) In over 90% of U.S., technology does not give dispatcher the location of caller (who might be lost or unable to explain)

(2) Worthless if phone or cell don't function at the time

Restraining/Protective Orders

(1) 75% of orders are violated

(2) Police often won't enforce unless they witness the violation

(3) An order is a piece of paper ... "Gun control" laws Disarm victims, have no effect on criminals.

User-restricted firearms

(1) Mandatory trigger locks slow down the defender only, not the attacker.

(2) Electronic restriction chip can fail / battery can die.

Tell Women The Truth

Don't ask women whether they favor more "gun control" laws. Ask them instead: "do you favor laws that prevent women from protecting themselves and their families from violent criminals?" Women need to understand that the real issue is self-defense. Every three minutes there is a woman defending herself with a sidearm.

Violence against women is immoral, illegal and intolerable. That's why it's wrong to disarm women and leave them defenseless against predators.

This is the whole point. The media has mindless twits like AF2Y going ballistic each time they hear a report involving a gun. They can't differentiate or do any intellectual research into what they are actually seeing/hearing, so like a Good, Programmed Klintonite, they minlessly bleat their cause to everyone.

So, I guess it will soon be true. Since Rosie is fat, spoons will be illegal...

Of course not. I have met hundreds of hams and the percentage of idiots is a lot smaller than in the general public, I would wager. Maybe I have just been lucky, but I have found that most hams are intelligent enough to offer an interesting conversation and are among the most giving and caring of people I have had the honor to know.

Even on this forum, the idiots are not a majority. :-)

You are absolutely correct or at least that is what most of the hams on usenet indirectly believe. They think the ARRL proposal and the FCC ruling were good for amateur radio. (Dumb down the standards! A service full of retard hams is better than a service full of smart ones.)

If anyone disagrees, then you should be able to support the following:

Step 1: No more automatic renewals. Individuals must retest and pass all elements required for their license class.

Step 2: The passing score for written exams should be 90%.

Step 3: Two code elements, 13 wpm for General and 20 wpm for extra.

Step 4: No-code license should be one year non-renewable.

There's a grain of a good idea in there. Retest every ham
every ten years and increase the passing grade requirement
one percentage point for every year he has been a ham until
he is required to score 100% after being a ham for 30 years.

The moral of the amateur radio "licensed" operators is at it's lowest in three decades.

If your looking for the FCC to eliminate amateur radio licensing forget it. The hams across this great nation and world will not allow it to happen. Why don't just sit back, study the thoery, code and take the test like the rest of us.

Let's get real here. I got my ticket primarily for the public-service aspect of ham radio. I'm not interested in cw nor am I interested in contesting. The concept of spending umpteen thousands of dollars and countless hours just to get a signal report from someone in Zimbabwe is ridiculous as far as I'm concerned. I am *NOT* knocking those persuits for those who do like them; it's just not for me.

That said, I hold a no-code tech license. If it were necessary for me to learn 5wpm cw to get _any_ ham ticket, I would not have bothered, and instead I would probably have looked at REACT. I'm sure some of the old farts reading this are probably thinking that would be better, however let's remember that first and foremost, public service is what ham radio is about and it's why the FCC doesn't just go and grab all the bands for commercial purposes.

Ham radio has to keep up with the times. During it's heyday, if one wanted to be involved with electronics and communicate over vast distances, ham radio was the only way to go. Contacting someone in Zimbabwe was considered a "big deal" then. Now, with cheap long distance and the Internet, the public is no longer impressed, and may, in fact, think that anyone who would go to such trouble instead of just picking up a phone is foolish.

If you insist on making the entrance and renewal requirements of ham radio more difficult, there will soon be no new hams. All you have to do is look at the average age of the ham radio population to see that is exactly what's happening. It may already be too late to change that.

846. Marconi RC675 Low Band VHF mobile Radio details required

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-14 00:00:00 UTC
From: Andrew Austin <andrew.austin@virgin.net>
Message-ID: <RZR15.1005$n32.18860@news6-win.server.ntlworld.com>
Source record: 109230

Hi all

Can anyone help with circuits, tuning details and more importantly EPROM programming details for the Marconi RC675 Mobile radio.

I want to get this going on 70Mhz (4M) so any details would be greatly appreciated.

Details via email to andrew.austin@virgin.net

Thanks

Andrew (G1JZK)

847. Information on Trader required

Newsgroup: rec.radio.amateur.misc

Hi All

Has anyone come across a trader seen at some radio rallies who is trading as wm radio sales.

Does anyone have a web site address or telephone number.

Any info to andrew.austin@virgin.net much appreciated.

Regards

Andrew (G1JZK)

As I said, Malenymph is just a screen name. You see all kinds of
stuff Down there in the subways. I've never had a problem but others
have. For NYC anything is normal. Just when you THINK you've seen it
all you get surprised.

Not much to debate here, as there are no viable cons to the issue. The Radiosigs-Guy will probably muddy the water some, but it's all fluff and feathers.

Down in his heart, he is right on the issues. You can tell by all the truly correct (as opposed to politically correct) comment he stimulates with his magnificent posts. He and the late Arky Bob would be a great team.

Now as how to register liberals .. there is one we can discuss. I move we register them as inmates. Better yet, register them as citizens of a leftist country they'd like better. Like .. Cuba. Or North Korea. Places where they'd have all the gun control they want. And all the taxes they want. Yeah .. that's the ticket.

Au contraire, Radiosigs-Guy. There is nothing questionable about my support for you. Now .. my vote for The Amazing AlBore is not questionable either. In fact it doesn't even exist. Governor Bush is gonna wax him come November. Bush wins in a walk .. wait and see.

Taxpayers and gun owners across the USA will be saying, "Rush Who? .. it was the Radiosigs Guy who blew this election wide open". I still say President Bush will have a place for you in his cabinet. Secretary of KommieKrat Agitation or something.

Y2K. It's gonna be a great year.

Welcome to Planet Earth.

Most intellectual lifeforms here don't believe
everything they read, or see on TV.

(or the Internet)

Example, for illustrative purposes:
Most have seen/heard that Al Gore "invented"
the Internet. Most don't believe this statement
because they have the intelligence to read/see
beyond the hype.

Al Gore doesn't know the difference between a
class A, B, or C address, let alone subnetting
or supernetting.

Unfortunately, there are always those gene fiascos
that are gonna believe what they wanna believe...
(these specimens are usually of the phylum "liberalus
dickheadeus")

Have a nice visit.

You'd have to look very closely to tell my ht from a cell phone. Same size, same color, same display and same keypad. Only external differences are ptt button, rubber duck antenna and volume knob. Don't see where anyone would think that a radio LOOKS more cool than a cell phone.

I already tried to make a similar suggestion.

For all gun-control advoctes to make it VERY
CLEAR that they are not carrying, so as to let
them see for themselves what they are suggesting
for everyone to live like.

After the criminals just rape, rob, and murder
most of them in a free-for-all, they might see
the light (other than the muzzle flashes).

But for some inexplicably odd reason, they get
VERY annoid at this suggestion, yet they can't
fathom why most of us reject their gun-control...

Maybe they just want gun control for everyone
else...I believe 'spoon-challenged' Rosie
O'DowhatIsaynotwhatIdo has made a fine display
of the hypocrisy evident in these cretins. What
with her armed bodyguards to help her fight your
right to protect YOURSELF!

Ask Doc--he's like a 'tickle-me-Elmo' on this one.
Just take the suggestions he makes for you to do,
and apply them to him--instant volatile reaction!

Uh, no, twit.

Nobody is making any such suggestion. (other than YOU).

Try acting like an adult, and quit making asinine
statements that attempt to just blow things out of
the realm of intellect.

Nobody that is trying to keep the Second Amendment
intact wants to see innocent people, especially MINORS
get injured or killed.

Instead of doing such a bang-up job on proving to the World
that your head is grossy defective, try being part of the
SOLUTION, and not fanning the flames of deception.

Taking away a law-abiding adult's right to bear arms
WILL NOT FIX YOUR PERCEPTION OF WHAT THE PROBLEM IS.

I have already ASKED YOU to put your money (and LIFE)
where your mouth is. YOU make it KNOWN that YOU are
UNARMED to prove YOUR THEORY.

You HAVEN'T, and WON'T; therefore, you are, as most liberals
are, FULL OF IT. Moreover, you became quite A**HOLE-ish and
defensive, PROVING that your statements are BULL. YOU won't
even take your OWN advice!!!!!

All TALK, no WALK.

Nope, and there isn't anybody to "boss around" when I'm 18 miles southwest of town, trying to get a visual on a possible tornado reported by radar that needs to be confirmed, all while peering through blinding rain and hail that is beating down on my car. There's nobody to "boss around" while I'm slogging through knee-high floodwater trying to get the last nursing home residents evacuated before the river crests. There's nobody to "boss around" when I'm poking through debris in the rain and dark that used to be a busy little town of 10,000 before the F-5 tornado hit and leveled it, trying to find any survivors that may need help. Wasn't much interested in looking cool, either. My "8 pound brick" was there so I could get help, assistance or report conditions. Say this isn't likely? Every item mentioned occurred within 30 miles of my home in the last 14 months, and hams (like me) interested in "Public service" were there helping. Oh, BTW, I'm also a certified First Responder (at my own expense), and was a volunteer at the local Humane Society for 4 years, until changes in my work schedule prevented me from continuing.
Maybe Hams like me are interested in "Public service" because we care more about our communities than we do about getting W.A.S. or DXCC on CW.

They won't know by checking the servers. The FCC will not keep track
of tech plus tickets anymore. You'll get a tech class license in the
mail. Keep your 5 wpm CSCE for proof if ever needed.

Yep, I sure was. I did QSO with him a couple of times (as a WB2 no less!). There was time I was having a QSO with a guy in Ohio and he jumped on us. I simply switched to CW to say '73' and it turned out the other guy was a good CW op. After a couple of 'QRQ?'s back and forth, we settled down for a good half hour chat on CW - right there at about 40 WPM. Didn't even hear Mike except a couple of times I dropped the Q-multiplier to see if he was still there. He sure ranted and raved. To be honest, I know a couple of guys who knew him personally, and from what they tell me, he was a heck of a nice guy - he just had a couple of quirks when it came to the radio.

A very important consideration one should ponder prior to modifying
their 2m HT for extended transmit and then relying on that radio to
summon help during an emergency is this: It might be the case that the
output stage of the transmitter has a sharp band-pass filter designed
to pass *only* frequencies between 144-148 MHz with all others outside
this range being greatly attenuated. FCC regs state that any spurious
VHF emission must be reduced by 60 dB of the power at the fundamental
frequency (or a maximum of 25 *micro* watts). Hence, an off-shore sailor
using an 2m HT with an output of 10w on 2m modified for 156 MHz transmit,
could possibly have only 10 uW (or 0.000010 watt) of output power, into
a stubby antenna designed for 144-148 (thus reducing the output power even
more).

I suggest you invest in a separate marine band transceiver.

Jeff KH6O

>whistling into his microphone to test his rig.

What's your elevation that you can hear (and speak for) the entire West
Coast?

Let's suppose you can hear everything within a radius of 25 miles of
your QTH; how many hams live within that radius? Would simplex be
more of a benefit to them than operating through a rptr?

Now Timmy .. don't abuse the Radiosigs-Guy. He's the friendliest ham since Arky Bob. He's a gentleman and a scholar. He's as good a statesman as K5BLB. He's a true renaissance man.

And he's gonna hand the Y2K presidential election to Governor Bush of Texas. Just wait and see. Yep, single handed, the Radiosigs-Guy is gonna mobilize the gun-owner and taxpayer votes (probably one and the same for the most part, anyway). And Election 2000 will be a magnificient blow-out. The KommieKrat party will go bankrupt with Radiosigs-Guy running the mobilization. Even the Chinese won't be able to bail them out this time.

Thanks to the Radiosigs-Guy, the Amazing AlBore will return to his tobacco farm in Tennessee and collect millions in subsidies and tobacco price supports. And he will have time to re-invent the wheel. And the internet. And Coca-Cola. And penicillin. And all the other stuff he invented in the first place.

Yep, the Radiosigs-Guy is a pretty amazing fellow. A real asset to RRAM. So be nice to him.

One wonders what kind of hate mail YOU get when you post comments
like this:

In article <39466780.F01B15F4@FSI.NET>, Mark E. Levy <mark@FSI.NET> wrote:
>Good. Get it reeeal hot, and then, shove it in your eye.

>847-753-6832 fax www.fsi.net mark@fsi.net

That doesn't say much for your company, Mark. What if prospective
customers do an internet search on you and see:

>Good. Get it reeeal hot, and then, shove it in your eye.

I sure wouldn't care to do business with a company president who
makes such hate-filled remarks, and would make sure others I know
avoid whatever it is you and your company does, if at all possible.

That's fine if you don't mind being leashed. You're helplessly dependent upon untold billions of dollars of computer equipment belonging to thousands of corporation, interconnected by millions of miles of cable, staffed by thousands of workers putting in tens of thousands of man-hours per day to keep that incredibly complex system running.

Hams, on the other hand, have no such dependence. It's the *only* communications medium in which any two operators anywhere in the world can communicate without using government or commercial communication services. Those same two operators don't even need to purchase commercially-built radios -- they can build their equipment themselves.

BTW, the prediction that ham radio is dying is older than you are: In "...1922 many radio magazines which had catered to the transmitting amateur swung away from him, one even so far as to run an editorial ... prophesying the end of amateur radio." (From Fifty Years of ARRL.)

73, Jeff KH6O

Very true!!...also bear in mind that US callsigns prefixed with
AA through AL are only considered as "Group A" calls within CONUS.
Outside of CONUS, they can be in other groups.

Does anyone have any experience with ignition noise on the Ford F-150?
Just did a new install..running the power leads directly to the batt and
the truck only being one year old. Truck came with resistor plugs and
wires so I believe that may not be the problem. Thanks for any ideas.

Hi

Could you please tell me something about a Yaesu FT757
HF Transceiver?
How much could be reasonably paid for it?
It appears to be in good condition and working, with original mic.

Any comments, greatly appreciated.

Max
LU2AVQ

Interesting that so many of the newer Hams continue to tout the "Public service" aspect. My experience with this group is that they are generally fat, lazy, often semi-literate, "cop wannabes". Most have never been in any position of authority nor exercise any sort of control over their lives. This frustrates them. They see "Public service" as a chance to carry a radio on their belt and be "important".

While the professional officers always warn these folks to leave the policing to them, invariably, these cop-wannabes take matters into their own hands, ultimately botching the situation and giving Amateur Radio yet another "black eye".

If they were **really** interested in "Public service", how about volunteering at the library, local hospital, animal shelter or soup kitchen? Oh, no one to "boss around" there. Couldn't "look cool" with that 8 pound brick on your belt. Sorry, should have known.

Or, so it seems to me.

Clearly your experience is quite lacking. Can you offer a specific example?

The MOUs with numerous served agencies and public accomodations for amateur public service do contradict your vague assertations.

Newsgroups trimmed out of politeness.

It is better to use a DUPLEXERS or TRIPLEXERS. The 6 mts goes to antenna 2 and
2 mts goes to antenna 3. Put HF on antenna 1. If you have a TRIPLEXER you can
put 430- 450 other radio.

Both ham radio and CB suffer from this phenomenon, but not to the
degree you imply.

Our club provides assistance to the Red Cross, various athletic
events, and on a continuing basis through the county emergency
operations center and Skywarn.

Most people don't get into ham radio as a way to do public service.
It's usually the other way around. You get a licence, and then
discover the opportunities to serve that utilize your abilities as a
ham, beyond what a non-ham can provide. In my case, I feel that
since the public is loaning us these bands to operate on, we should
perform some public service in return. We certainly see enough
instances where normal communications channels aren't suficient in an
emergency..

During the Y2k rollover, we were on standby to provide communications
in case the county's 800 system went down.
Motorola couldn't provide any assurances that it would remain
operational, but our radios simply don't care about the date. As it
happened, nothing happened. I didn't expect anything to happen
either, but we were there.

Last week I had a downburst near where I was storm spotting. It took
out the phone lines, and the cell system lost eight towers from the
same storm. The area happens to be on the fringe of the county's 800
MHz system, so the only thing that was working, in terms of getting
help and reporting what was going on, was our 2 meter repeater.

A month ago, we had a severe hailstorm, and our advance warnings
probably saved lives. With several square miles covered with

baseball sized hail, we had no injuries, and only unavoidable property damage.

Yes, my car flies Skywarn signage, and flashing lights. At the request of the county EOC director.

I also carry an ID that extends his authority through me, so I can get past police roadblocks in an emergency, and be on the street during snow emergencies. We routinely carry patients to the hospital for dialysis and deliver urgently needed prescriptions during heavy snowstorms. This could be done by ambulances, but we free them up to make more serious runs, that we can't handle.

We are very aware of the "cop wannabee" problem, and if we ever see it happening, we will step on it fast.

As for literate, I'll let my movers answer that one. I had enough books in my last move to double the packing time from their original estimate.

> If they were **really** interested in "Public service", how about

> with that 8 pound brick on your belt. Sorry, should have known.

Not interested in "bossing anyone around", and I don't "look cool" with or without a radio.

When I lived in rural california, within a month of moving into town, I had signed up for the fire department. This is an unpaid, totally uncompensated position, that requires many hours of training, and many many interruptions at any hour of the day or night. Most of our calls were called out to freeway accidents, so it wasn't even helping anyone we knew, or were ever likely to see again. I did take a certain amount of pride in being a fireman, who wouldn't? The interesting thing is, I was just as happy to be in doing equipment checks or cleaning hoses as pulling people out of wrecked cars, or putting out fires. It also taught me a lot about myself, like that I make a better follower than a leader. Funny thing is, when I realized that, I expected to be disappointed somehow, but I wasn't. I'm prefectly happy not to be in charge.

When I first got my licence, I lived in Anaheim Ca, and belonged to a group of hams who were also amateur seismologists. (comes with the territory, literally) Don't laugh, when a quake occurred, the news media and city officials went to us first to find out what was happening, then to Cal tech for the official (but somewhat delayed) story. The watershed event for this was in the simi valley quake, we had the center of damage pegged properly, but epicenter determinations from caltech sent all the emergency equipment into an area where there was very little damage. This is where the city governments learned the difference between the epicenter and the hypocenter, and that seismometers can't find the hypocenter in any

useful sense. With our many observers all over the area, we could pin the damage center very quickly, usually in just a couple of minutes. It was very similar in effect to Skywarn here in the midwest. The NWS radars are fine, but they don't cover as well as you think, they have a six minute delay, and they can't tell you what's happening nearly as well as a trained observer at the site.

Am I a typical ham? I don't know. I guess I'd like to think so.

What public service have you done lately?

With an address of "HotPrsut" one would assume that you're referring to yourself. However, since you chose to address your sweeping generalization to my posting, I'll reply to it.

It just so happens that the fire chief of the community for which I provide communications assistance, was involved in hurricane Andrew. He saw the value of having ham radio assistance during emergencies and has had the participation of amateur radio volunteers written into the village's disaster plan. The local police and fire dept. personnel welcome our assistance and we have access to their frequencies as well as certain facilities that are not open to the public.

There are 8 of us in the group, and none fit your generalization. Many are professionals, and some, like myself, own our own companies.

In the future, you may want to refrain from describing yourself when you really mean to slam someone else.

Or you could do what I am doing: Teaching Tech licensing classes to bring new hams on board. Some places to try: Boy/girl scouts, schools, local 'adult' education, recreation centers. If you really have the need you can wear your radio on your belt and boss your students around ;-)

73's all,
N6QGK (@arrl.org)

The other day I received what I perceived to be TRASH about Janet Reno's anti-Christian statements attributed to her on a 60 Minutes telecast. Not for a moment did I believe an Attorney General would ever lower herself to anything so inane.
And so I wrote to CBS.com to get the "skinny." Kindly read what I just received. I'm telling you government haters to shut your stupid mouths because your lies lower the value of your own integrity rather than those you target with libel. You scabs ought to be ashamed of yourselves for spreading such garbage about our Attorney General. Undoubtedly you must be Republicans or just ultra rightwing non- aligned scabs!

Hello,

I have a BRAND NEW set of Spanish CD learning disks.... This is a pretty large set...11 CDs in all. Its Mint and a dropped $100.00 for it at Boarders Book Store just last month... I was thinking It would be good for commuting to and from work but seems my run to work just isn't long enough. I end up playing radio instead! This is the exact set of Lessions the Government used to quick teach Boarder Patrol officers and the like... Its a pretty impressive package with a nice study manual.... All comes in a nice case....

Asking $75.00 Shipped Cont. US (again, this is brand new)

PLEASE send me e-mail and I will send you a picture of the package!

An excellent idea.

After all, guns are merely inanimate objects, like stones or frying pans, totally incapable of causing even the slightest harm.

"Liberals," on the other hand, are by their very nature dangerous to our freedoms, our security, our property, our money, and our very existence as a people.

They are actually far more dangerous than ordinary criminals: Like muggers, they take what doesn't belong to them -- but unlike muggers, they often have the force of "law" behind their thefts and almost always present us with a concocted fake "morality" to convince us that their depredations are "right" and "just" or "for our own good."

A good argument could even be made that most of the actions of "liberals" are already illegal -- if we take the Constitution of the United States seriously, that is.

So, rather than just registering "liberals," let those who commit illegal acts be brought before a renewed bar of justice. Since a patriotic renewal would mean literally "miles of trials," we might begin with those who have been instrumental in infringing our right to keep and bear arms -- that is, restricting that right in even the slightest way.

With all good wishes,

--

Kevin Alfred Strom.

Ed,
What he is saying is, in HIS opinion, (I won't comment on it's worth), the
ARRL's support of the recent restructuring is the same as eliminating
amateur radio. Sour Grapes, in other words.

To all those having written, phoned, telegraphed and e-mailed about my disappearance, I want to assure you that all's okay and I've been putting in extra hours working to pay for a very expensive upcoming summer vacation out of the U.S.A. which most of the goons on this board could never afford to begin with. The hotel in which I and my wife will be staying is rated so high, all they can do is dream about it. However I will make sure to send cheap postcards to the good persons here once I sort them out, the persons not the postcards.

I wanted to say that I am fortunate in being in an elegant loop of "sophisticats" whose main discussion for the past several days has centered on KV4FZ with his main supporter being Bob Sherin, W4ASX and because of it, the fur has flown.

Bob is unique in being able to separate the bad ham from the guy he feels is taking a rooking from the Feds. Unfortunately I don't have the willingness to delve into FZ's character that much to enable me to look for a spark of goodness about him. Perhaps it's there but I could never find it and have no intention of looking for it but perhaps a proctologist may be able to discover something like a good eye looking back at him, winking?

AF2Y

Mr. Baggums,
It's called STALLING. Herbie has no confidence whatsoever in his frivilous garbage being heard by the S.C. All he's doing is hoping and praying for a Bush victory in November and with it a revamping of the S.C. along with the F.C.C.

Although being a staunch Herbie hater lo these many years, I must give credit where credit is due and difficult as it is to admit, so far the felon has made monkeys out of the F.C.C. Let's see now-when did he start lying to Judge Luton-I think it was in 1994. Can you believe that the guy's still on the air with a call removed from the FCC database when Moses parted the Red Sea and Jesus walked on water?

God, the guy has used every type of appeal short of a banana-has essentially tied up the Feds in a mass of paperwork and has cost the taxpaying citizenry probably a million bucks or more. It's called due process while some of us refer to it as a "doo doo process."

And from what I hear, whenever he does make an appearance on 14.313, it's the same old bullsnot he's been pulling forever. Attacks on Intercon, Ruth Hoffman, AF2Y, WB2OTK and other sterling ops while Riley Hollingsworth sits there quietly never citing him for agitating which he decries and about which he writes threatening letters. Why not you ask? Because if he pops FZ, IT'S APPEAL TIME LADIES AND GENTLEMAN and the saga continues.

I have an ft-101ex I would like to sell or trade. The AM recieve is a little low, and the power on 10 meters and possibly some other bands is a little low but the ssb, and cw recieve is perfect, and I think a new driver, and maybe an alinement and the radio would be all set. I will considder trade with cash for a solid-state hf radio that might make a decent backup radio, or, if you make me an offer, more then likely if it isn't rediculas, I will considder it. I have with the radio, a sure 444 mic, very banged up, but works fine. Email me if interested at n1umj@mediaone.net

Hmmm, if the Dems like Al Gore are so Pro-Choice, then why don't we have the choice as to where we can send our children for their education? Having to go to the public "schools" or PAYING to send your child to a private school is not a choice. How about little Al supporting a position that says he is Pro-Choice for everything including education. How about "public funding of education, not funding public education". Oh, can't do that, as that might offend the unions. Al is not Pro-Choice, he is simply PRO-ABORTION.

Or, how about Al supporting the method of self defense. So is Al Pro-Choice on guns? No, Al is simply PRO-ABORTION. He is nothing about choice.

Democrats, ruining America since 1860.

There's a radio store in the center of Newington Connecticut
where they sell ham gear. The last time I was there, I asked
the guy behind the counter if they had a catalog, and he
said, "Why should we go to all the trouble of printing a catalog
when the ARRL publishes one for us every month?"

The only post I'd take under Bush would be doorman at the White House so I
can show him the way out and then lock him out.
And I have gotten a lot of e-mail about my anti-gun stance. There are a lot
of hams and hammesses out there who agree wholeheartedly with yours truly
therefore rightwing nut cases beware-you are going to have your barrels
stuffed.
And yes KK4TL, you will be getting a postcard but it's going to be from out
of the United States. The last place I'd vacation in would be Maine because
the ocean is too damn cold up there and I like hot hot hot.
Send me your address and I'll keep it for reference.
Doc

Listen up bunky. What a woman does with her body is not the government's business. It never was until the stupid Republicans suddenly decided that THEY were God's gift to America.

It never was an issue until the crazy Repub. Christian Coalition right wing began meddling in government, trying to push their version of J E S U S down everybody's throat. Who the hell are they to speak for J E S U S? Abortions are between a woman, her physician and her clergyman but NOT necessarily. Politicians KEEP OUT!

Remember this: as long as Bush keeps playing up the abortion issue, the closer he gets to losing which is going to tick off KV4FZ something fierce. How strange.

Republicans say they are against government intervention in the private lives of the public yet applaud the invasion of a woman's rights. That's hypocrisy beyond question and that's why I'm asking everyone on this board to vote for Al Gore. Your very freedom is endangered if you don't.

That is somewhat overstating it. When SA was on, typical (non-differential)
performance was 95% within 50 to 100 meters (164 to 328 feet) depending on
the GPS receiver. With SA off, typical performance seems to be something
like 95% within 8 to 12 meters (26 to 39 feet) or so.

See http://www.erols.com/dlwilson/gpscmpsa.htm

perhaps you do not understand usenet protocol?

your signature exceeds the recommended 4 lines, [just as mine does]
therefore you should choose another argument to justify your misleading
advertisement link.

> Your reference to a so-called "advertisement" regarding the book and
> website are NOT in the text of the post, but AFTER the signature and is
> therefore deemed appropriate according to Usenet protocol.
>
this is also incorrect. my above statement did include a global rule
of usenet. the above paragraph contains a local rule. each newsgroup
determines their own policy on advertisements, just like binaries.
if it's not allowed/wanted there, then you don't post, sig or no sig.

During the last week of August, the WIA will host the 2000 meeting of
the International Amateur Radio Union (IARU), Region 3.

The WIA will be welcoming some 100 delegates from IARU member countries
throughout Region 3 that includes much of Asia and the Pacific basin.
The Darwin Amateur Radio Club is providing "on-ground" help to ensure
this conference, believed to the first in VK, is a success.

These meetings debate important issues facing the amateur radio service
and to make strategic policy decisions, which are aimed at strengthening
our hobby.

There are many pressures facing the Amateur Radio Service worldwide and
these include:
* The threat to our spectrum allocations
* Electromagnetic Compatability laws (EMC)
* Electronic Radiation (EMR) standards

The delegates will discuss the international treaty under which the
Amateur Radio Service is recognised by the ITU.

The IARU Region 3 delegates are also to look at further assistance to
encourage more radio amateurs in emerging nations in its region.

For futher information about the conference visit the IARU page on the
WIA Victoria's web site. The URL is www.tbsa.com.au/~wiavic/iaru

Wait a minit there buddy .. The Amazing AlBore did too invent the internet. Did too .. did too .. did too ! ! !

Why is everybody down on the KommieKrats lately? I think Queen Hillary's socialized medicine plan would have been the greatest thing since Lyndon Johnson invented food stamps.

Radiosigs-Guy .. talk some sense here. Please. We need a voice of reason here.

Radiosigs-Guy imparts more brilliance to RRAM:
>Do you advocate putting a pistol in every crib and arming every
>kindergartner with a Saturday Night Special too?
>

Stop it Radiosigs-Guy .. you're killing me ! ! ! Hey, just what is a Saturday Night Special, anyway? Is that the same as an assault rifle? Or is it a weapon of mass destruction?

For the nostalgia buffs:
What year was the term "Saturday Night Special" coined?
What criteria (or criterion) did a weapon have to meet in order to be considered a "S.N.S."?
Ok .. let's do multiple guess:
What year?
a) 1967
b) 1977
c) 1987
d) 1997
e) None of the above

What criteria?
a) Size
b) Melting point
c) Number of rounds it would hold
d) Number of rounds per minute it would shoot
e) None of the above.

Takers? Come on guys .. I bet even KK7HO doesn't know the answers to these.

No it isn't. Ferrites around the sep cable at each end help.
The transistor in the microphone is a problem also.

I finally got a handle on the problem by running microphone audio
from my aircraft's audio panel into the RJ45 on the back, with
the signals bypassed to the chassis.

Details at www.omen.com under my flying subpage.

Well, it's generally good advice for an HT, but the 706MKII does
quite well above and below 2 meters. Output is nearly constant
from the broadcast FM band through 200mHz on mine. The
706MKIIG, on the other hand, may have a problem in this regard.

Message-ID: <3949b499.15610766@news.usol.com>
Source record: 109066

Wow I just dropped into this newsgroup to do some catching up, like a lot of Hams I have not operated for quite some time and I find the FCC changed some rules allowing more people to use HF.

I have been a ham since the early 80's and yes I was a Tech + and did most of my operating on VHF & UHF. I have helped build two repeaters & controls for these repeaters.

When the FCC changed the Tech license I welcomed the new no code hams, I did not attack them and I am happy to say all of them that I know of have been good, friendly operators.

Now the FCC made some more changes and I have taken advantage of them and now have my general, I did not ask for the changes I have been a Tech for over 15 years and was happy to be one. When I upgraded I was rag chewing with the three Extras that were giving exams in our area and I asked them what they though of the FCC giving away what they had to work so hard to get. One just said whatever, I dont think he liked it but he has known me for over 10 years and is now one of the control operators on our repeater system so he did not want to offend me. The other two Extras supprised me with some insite that I had not thought of. Bob told me what he thought the FCC was doing was trying to get more hams on the bands so we would not loose them, he said that the HF activity has fallen off and if the FCC cannot get hams using it then they (The FCC) would have to alocate some of the ham radio frequencys for other uses. So they (2 of the 3 Extras) were happy to get new people upgrading to General so the low bands would be used more hopefully making ham radio frequencys more secure from being taken over by other services.

I have lived a very sheldered life I guess, from working VHF & UHF for all the years I got the impreshion that us hams were a helpfull bunch, but SOME, NOT ALL of the old timers on the HF remind me of CBers, they think they OWN the frequencys and that we should have to adhere to some policy that only they control.

The FCC grants ALL OF US our privilages, they decide who does and who does not get the privilages. So please if you do not agree with what the FCC has set up by all means contact them and tell them all the reasons why they should consider changing their minds.

If you give a few of us (me included) welfare hams a chance you might find that you may enjoy some new blood on the bands, in stead of going nuts when one of us makes a mistake chuckle, rib us, have fun. You might even pass along some of your wisdom, I am sure we will need it.

E and E. The "Saturday night special" is a derivation of the "zip gun"
which was made famous in the getto's of NY in the 1950s. It usually
consisted of a barrel made from a automobile antenna, in which a .22
cal round was placed. It was normally good for one shot only.

Look at it this way....the ARRL is all we got, they do in fact
represent us to the world. And the rest of the world has one vote,
just like the USA. If your a member you at least can work to change
what you don't like.

Ive been a member since 1962. A lifer since the mid 70s. I certainly
do not agree with everything they do. But I have had the oppurtunity
to express my opinion. A non-member does not.

First off congrats on the upgrade. Now buy a bullet proof vest. You
are right, some folks on HF suffer from old codger syndrome. Ignore
them and find some real people. I for one am quite impressed by
the "welfare generals and extra's". I have no problem with letting
them into any qso I am in. In fact I go out of my way when I hear a
interem AG/AE to pick him out. I have met a lot of new friends that
way. Try 14.275 and 3.901 and welcome.

954. KC8JBO...Top 3 List!!!

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-16 00:00:00 UTC
From: af2y@my-deja.com
Message-ID: <8idjdlsse1@nnrp1.deja.com>
Source record: 109074

I find it VERY HUMOROUS that KC8JBO is INCAPABLE of posting without the inclusion of the following in his posts:

1. Allegations of CHILD MOLESTATION.
2. Foul Language.
3. Jail...Alcohol or Drug Troubles!!!

My guess is MONKEY FACE does this for one reason.....His CANCER RIDDEN DEAD father was a DRUNK who MOLESTED poor, poor FATASS as a child!!! If KC8JBO's father would have smoked 5 packs of cigaretts instead of 4 a day, it might have saved CIRCUS BOY from a few years of MOLESTATION,hohohoho.

How are those MAGAZINES doing, HORSEFACE?

Have you got that HOLE dug in the backyard for the 'ole GOAT yet? I can't wait to take a NICE HOT DUMP on it, hohohoho!!!!!!!!!!!!!!!!!

The TENACIOUS one,

PITBULL

Ham radio's answer to perrenial political
candidate and stark-raving looney, Lyndon
LaRouche, the great RF-Bullshipper Herbert
Luther Schoenbaum KV4FZ has actually gone
ahead and filed a Legal Brief with the U.S.
Supreme Court to keep his ham radio licence.

Can you FREAKIN BELIEVE THIS SHIT..??

Who else but Hemmorohid-Herbie would go so far
as to file with the US Supreme Court in a bit to
keep something as meaningless as a Ham Radio Operators
Licence..? I guess this is proof positive that the
data I've been hearing from St Thomas/Croix is true
that Herbie is REAlly IS nuttier than a nest of
cukoo-cukoo birds, and wil do ANYTHING short of
Grand Larceny to keep his callsign on the air.

WHAT A BAG-O-NUTS! Someone tell Herb he's been in the Sun
too long!

> is able to get 1000 QSOs is the winner.

Ah, but remember, it was a hypothetical situation. If the rules
actually stated that you had to transmit in Celtic and Gaelic - then
there might actually be people transmitting in Celtic and Gaelic.

But I accept your point - CW does actually have utility, whereas Celtic
does not(anymore, at least)

Hey Jeff - you are always into arcane stuff like CW, sailing, and the
breast stroke - I bet you know some Latin too.

Hello Dave,

Been a member for almost 20 years. Have not always agreed with the league's direction but have had a chance on several occasions to submit my input through the local region director.

They are our international representative and do maintain a lobby of the halls of government. In addition to the above, the insurance and outgoing QSL service is useful.

They don't restrict it to members but I have also had good luck with Tech Support from the league's tech guys.

Lastly, I've always felt that if you didn't vote, you should not complain about things. Same is true here. Join and if the direction the league takes is not one you would choose, elect a new region 3 director.

my 2 drakmas worth

John N0ISL

PS Its really too bad AlGore didn't invent Ham Radio, Think of the lobby power that would have, Or did AlG invent ham radio?

I don't know of any ARRL Director that I believe would support that proposal. The ARRL's policy has consistently supported having the FCC be the regulator of Amatuer radio. Can you point to any ARRL policy of statement of any Director on which you base your conclusion?

I can state categorically that I would not support any decision, ARRL or other, that would eliminate Amateur Radio licensing.

I think Radiosigs-Guy is pulling our collective leg again. Word from the inside is that Governor Bush is now aware of the hundreds of thousands of taxpayer votes and gun owner votes the Radiosigs Guy has mobilized to date. So it just may be that the Governor has invited his number one vote-turner-outer to Kennebunkport to discuss a high-level cabinet position.

Get it straight, fellow right-wingers. The Radiosigs-Guy has done all this without a single zillion dollar contribution from the Buddhist monks or the Chinese or the FemiNazis or the Moonies or the Hare Krishnas. And so far under his leadership, nobody has committed suicide or fallen asleep on the railroad tracks to Mena. In short, the Radiosigs-Guy is the best there ever was. And I don't think he'll forget the little people when he gets there.

Hey, Radiosigs-Guy .. do I get a post card from Kennebunkport? Please have the governor autograph it for me while you're there.

I love it when a plan comes together. :-)

Hammer-Man promises us a:
>ROOOOOOOLLLLLLLLLL
>CAAALLLLLLLLLLLLLLLL !!!!!!!

Ok, Hammer-Man. On with the roll call and don't bother with the Radiosigs-Guy. So what if he retired or not. He's getting ready for his vacation out of the country. Maybe he'll operate portable so he can check in for the roll call.

Be nice to Radiosigs-Guy. He's going to be a really high level official in the upcoming Bush administration. So he's a dentist? Maybe they'll let him do dental work for Komrade Klinton's staffers. Like the dentist in "Marathon Man" working on Dustin Hoffman. Then maybe we could get the truth about Waco and Whitewater, etc.

Don't leave anyone out of the Roll Call, Hammer-Man. And post a notice here so we'll know when to listen. Be sure to invite the gang from 3950. Friendlies and netters alike. So they can lay aside their differences for an afternoon and enjoy a >ROOOOOOOLLLLLLLLL
>CAAALLLLLLLLLLLLLLLL !!!!!!!

Here's something that should scare the living shit out of
everyone.

He's almost right.

The issue of abortion is not the business of government.
Personally, I believe it to be wrong. That would make me Pro Life.
But I also believe that the issue is not the business of Government.
That makes me Pro Choice. But tell the ProChoicers that I choose
life...and well, now you have a horse race.

I rarely agree with Doc. But in this case, this statement is
pretty close to accurate. It's NOT the business of Government.

It's also not a matter of what a woman does with her own body,
either. Because there are at least two people involved, the woman,
and the father, as well as the legal battlefield of the fetus.

We need to get Government out of this issue, like so many others,
and a good dose of conscience into it.

Food for thought.

Gentleman,

Please read this this.......

KV4FZ's Couragous Fight

KV4FZ has been an active amateur radio operator since 1954 when he was first licensed in the Midwest as W0VXO. While working his way through college (1960-64), he spent summers teaching at several camps for the physically handicapped. He was highly successful in teaching seriously disabled campers about the potential of amateur radio. Many of these campers went on to fully qualify for their amateur radio licenses.

His father, W.B. Schoenbohm, was the founder of Courage Center in Minneapolis. Herb was a major force in pushing for the initiation of the Handi-Ham program, which is now widely recognized as the premier service organization for disabled radio amateurs. After college, Herb worked as a international sales representative for Gates Radio, Harris Corp, and Collins Radio. He sold and distributed broadcast equipment to the international market, primarily Latin America. In 1968, he moved to the U.S. Virgin Islands with the intent of better serving his customers. His wife Monika was, at that time. a service representative for Pan AmericanAirways. KV4FZ was very active in DX work and, as a frequent traveler, put many new countries on 160 meters. He was instrumental in getting Stew Perry, W1BB, the necessary countries to be the first ham ever to get DXCC on 160 meters. He also gave G3IOR the last country he need (VP2EFZ, Anguilla) for the first ever DXCC via satellite (Oscar 7).

During the 1970's, KV4FZ was able to set CQ World Wide records 160-10 in almost ever category except 40 meters. He was also very active in supporting the IARU Intruder Watch after encountering frequent yachts in the area that had acquired licenses of convenience for a fee. At that time, FCC Commissioner Margita White appointed KV4FZ as the Virgin Islands SECC. The SECC has responsibility to plan and manage the operation of radio communications resources during island emergencies. Herb fulfilled that role magnificently and was named a Virgin Island "Hero" after Hurricane Hugo destroyed most of St. Croix in 1989. Herb received this award for keeping vital communications circuits open during the crisis.) Herb also took a detailed interest in how most of these "pirates" has a close association with the so-called "service nets" on the top end of 20 meters. He joined the net and attended several of the hamfest functions. Only then did he learn how deliberate and sordid was the manner in which net members misused the amateur spectrum as a means to provide an international telephone toll by-pass service. One of the most flagrant of all these operations was the "INTERCON" network operating, for the most part, on 14.313 MHz. Herb began detailed monitoring of their operation and intercepted many communications that were appalling to say

the least. In 1979, KV4FZ listening to what appeared to be a "business connection" between WB6MID/8R1 in Jonestown, Guyana and WB6MID in Ukia, California.
Herb broke in and informed the net personnel that this type of operation on an amateur frequency was illegal. Furthermore, Herb stated that their communication constituted international business communications related to funds transfers and the procurement of equipment and supplies. The net hierarchy reacted by excoriating him for his "embarrassing comments" and ignoring the violations. The net bluntly told him that the Jonestown Operation was a missionary group and that they had special permission from the Carter administration to use ham radio to further their "worthy cause". Herb persisted with his concern and was quickly declared 'PERSONNA NON GRATA" by Robert Sternberg, AA4EE, a tax attorney who claimed to be the nets legal advisor. Herb expressed his concerns to other net operators participating in the companion "Maritime Mobile Net" such as Dick Eastman, N5FX and Mike Galego, KA4MUJ. Several Maritime Net members agreed that some of the more criminal practices, such as one ringers and "maintenance charges" for providing long distance toll free connections practically anywhere in the world, must be curtailed.

Some of the net cabal hierarchy rebuffed all attempts to institute reform and a nasty power struggle ensued. Eastman and Galego were "ex-communicated" by Ruth Hoffman N4LMC, Eddie Ricca K4PT and Art Candell N4PCK. The latter began a propaganda campaign, replete with false stories and personal attacks, that promised to destroy any net opposition that
sought reform. The net members objected to the lively participation of KV4FZ, KA4MUJ, and N5FX (a former net director) who frequently brought to the attention of net participants certain stations whose conduct violated the FCC and International Rules.

During the 1980's, net members began a campaign of coordinated complaints to the FCC claiming that the aforementioned three were causing willful and malicious interference to the net. N5FX and KV4FZ both received prefabricated FCC citations at the behest of the net command. Both were able to get the FCC to nullify their actions based on the fact that their constructive comments did not constitute "malicious interference" and that certain members of the net themselves were engaged in a premeditated campaign of harassment and interference.

Several members of the net were subsequently caught interfering with the communications of KV4FZ and KA4MUJ. They include K2BFI and AA5LY. AA5LY later gave the FCC, and supporters of KV4FZ and KA4MUJ, a complete and accurate accounting of the plot by disgruntled net members to "settle the score". That plan included a vigorous campaign of letter writing to politicians in Washington in an attempt to pressure them into punishing the net detractors.

N4PCK had his own reason to get even. He had known Herb while he was operating in Haiti as HH2A and was very active on the INTERCON net. Herb had learned, through his contacts in Haiti, that Candell had a serious problem. He would solicit young pre-teen boys and pay them a quarter to perform sex acts on him. A prominent Haitian administrator was told, by his

son, that the young boy had been abused and sodomized by Candell. There was no arrest or trial. But the arrival of the outraged local citizenry at Candell's hillside villa dictated that Candell receive an armed escort to the airport. Candell then appeared in the Orlando, Fl area, illegally using the call HH2A/W4 and actively engaging in net activities. The net watchdogs, now known as the B.A.R.F. (The Better Amateur Radio Federation), pointed out that Candell was not eligible to use a Haitian call sign in the United States unless he was a Haitian citizen and had been granted a proper permit from the FCC.

Again the net members supported Candell and sought to silence Herb. However, the FCC ruled that Candell could no longer operate from Florida unless he obtained a valid U.S. amateur radio license. Candell later paid off a VEC in Silver Springs, Fl to fraudulently give him a passing grade on a General Class license examination. The VEC was later sanctioned but Candell was neither removed from the air nor required to be re-examined. In 1989 Candell was finally arrested and convicted of multiple incidents of child molestation. He was given a suspended sentence that was partially based upon INTERCON's assertion that he had been rehabilitated by amateur radio service in their net. (Candell was arrested and convicted again in 1994 for carnal assault on several boys between 8 and 10 years of age whom he had invited into home under the pretense of showing them his ham station. He has been institutionalized for several years but his ham license was, nonetheless, renewed in 1996 for another ten years.)
In 1990, Candell continued with his plot to destroy and discredit KV4FZ in retaliation for Herb's alleged "interference" with the net's "business". Candell actively leagued with other enemies of KV4FZ such as Pat Miller, KP2J in St. Thomas, and Richard Whiten, WB2OTK. Miller supplied Whiten the so-called "proof" of a crime by playing a recorded tape on both 20 and 75 meters. Miller introduced Candell to the operator of a long distance resale service that KV4FZ briefly subscribed to in 1987. Some of the users of the CALLS (Caribbean Automated Long Line Service) system (a six digit access code system on which half the possible combinations of digits gained the caller access to a WATTS line) had been illegally abusing the CALLS scheme. Malcolm Ford had claimed losses to the tune of $200,000 and needed a scapegoat. Thereupon, it was decided that a criminal case should be manufactured against Herb, KV4FZ.

Ford needed this falsification to support his ludicrous claim that the impending bankruptcy of CALLS was not due to his inept management. Instead, it proffered that somehow Herb had caused his business to fail. This was vital to Ford because he was still salaried as the GM of CALLS even though they were in receivership. Ford's efforts failed and he was physically removed from the operation after the Federal Bankruptcy judge found him raiding the treasury and assets of CALLS.

However, all during this time, Ford was fabricating evidence in an attempt to establish a connection between CALLS financial failure and KV4FZ. Yet the Department of Justice continually refused to prosecute Herb. This resulted in even more acrimonious letters to officials and politicians in a further attempt to implicate Herb as the culprit.

Malcolm Ford, the previous owner of CALLS, was then under investigation for bankruptcy fraud. In an attempt to escape indictment, Ford hired John Ackley, KP2A, to fabricate various reports that would designate Vitelco(a local phone service), STSJ Long Lines, ITT and Herb as coconspirators who were attempting run him out of business. While this was going on, Ackley was attempting to buy the nearly defunct company for ten cents on the dollar. (Ackley failed but STSJ was able to get the company back on its feet.) Miller, Hoffman, Candell and others intensified their letter writing campaign to hundreds of politicians in Washington urging them to investigate. They even began writing letters to newspapers, claiming that politicians were shielding KV4FZ from prosecution. In these hate letters to public officials, Herb was equated with organized crime, drug trafficking, and high level political corruption. In 1991, KV4FZ was writing a hard-hitting column for the St. Croix Avis newspaper. Herb frequently attacked political corruption so it stood to reason that he might have some enemies in government. Herb had articles published about the check kiting and House Banking fraud perpetrated by the Virgin Island Delegate to Congress, Ron Delugo. Outraged and distraught, Delugo (who had designs upon becoming the next governor of the Virgin Islands) assigned a full time staff attorney (Sylvester Julian) to explore methods of pressuring the FCC, the Secret Service, and the Department of Justice into investigating Herb and "putting a 'severe hurting' on him".

However an obstacle remained in the path of their plan to annihilate KV4FZ. Some at the FCC supported Herbs activities on behalf of the amateur radio service. Additionally he was elected as Vice Chairman of the Virgin Islands Republican Committee, which made him a frequent delegate to the GOP Conventions. Furthermore, Herb was personally acquainted with President Bush. Herb's father had served on the President's Commission for the Handicapped.

Initially, each and every involved agency claimed there was not enough evidence to support a charge against Herb. Subsequent to this, John Ackley, KP2A, manufactured a list of 660 telephone calls that were prearranged to add up to $1,047 in value. This was exactly forty-seven dollars over the amount needed to achieve the threshold of prosecution. Delugo wrote threatening letters to various government agencies threatening that he would see to it that their funding was severely curtailed if he did not receive figuratively receive Herb's head on a silver platter. Ruth Hoffman constantly badgered the acting U.S. Attorney for the Virgin Islands, Terri Halpern. This continued to the point that Hoffman was finally ordered to stop harassing Halpern. However, as a Congressman to the VI, Delugo was in a position convince colleagues not to block Halpern's confirmation. Delugo reportedly told Halpirn that, unless she prosecuted Herb Schoenbohm, she would never become U.S. Attorney. (Halprin was fired in 1992 by the DOJ for ethical lapses after the Office of Professional Responsibility investigated the severe criticism, from the 3rd Circuit Court of Appeals, that Halpern received for the "knowing use of false evidence" to secure a conviction. Nevertheless, the trial prosecutor was cleared by OPR because they were unable to prove that the prosecutor actually knew the evidence used was false.)

Herb's trial took place in April 1991 (four months past the five-year statute of limitations). Both Ackley and Miller testified, under oath, as to the veracity and accuracy of the incriminating evidence they had

assisted in concocting. (Miller offered his so-called "caught in the act" tape of Herb dialing "illegal access codes". Ackley presented his list of random numbers that he verified, as a government expert witness, were all telephone numbers dialed by defendant Schoenbohm.

The puzzled and confused jury convicted Herb on all three counts of Title 18, SS 1029(a): 1,2 and 3, which is, in reality, an illegal credit card statute. This statute has been used infrequently to curb the illegal use of cloned cellular telephones. After trial, Schoenbohm with the help of Bob Sheron, W4ASX, closely scrutinized the evidence and began tracking down the parties that Ackley had claimed, under oath, that Herb had illegally called. A most amazing discovery unfolded: most of the persons contacted did not know Herb Schoenbohm or had never had a telephone conversation with him. Amazingly, they had already given statements confirming this fact to the Secret Service investigators. Most had even identified persons, other than Schoenbohm, whom had called them from the Virgin Islands during the timeframe in question (1987). Interestingly, the court refused to allow Schoenbohm to verify the numbers before trial.

The court incredibly claimed that it needed to protect the potential witnesses from pre-trial disclosure! After trial, armed with affidavits from the persons alleged to have received Herb's "illegal" calls, Herb moved for a Judgment of Acquittal not withstanding the jury verdict. The court granted the motion on all counts but one (Possession or Use of a Counterfeit Access Device). The court maintained that the Miller tape proved that something was amiss and the jury could correctly deduce from this that the law had been broken. This court decision differs from the previous decision in that the device is similar to, but not exactly the same as, a valid device and does not require the threshold of over $1000 in use. (The irony in this entire matter is that Herb freely admitted to using the service briefly in 1987. He was a bona fide customer and the total actual use amounted to $106. CALLS finally was required by the court to produce Herb's check for $104 that they had received in1987. They admitted that they did not cash the check but, instead, held it as an aid in the plot to entrap KV4FZ.) When the court vacated the judgment requiring two months prison time, Herb's detractors were enraged and, once again, began the political letter writing campaign. Now the claim was that Herb had used amateur radio in the commission of a crime and should be taken off the air. They sent the highly doctored Miller Tapes to the FCC in an attempt to prove their incredible theory. Their letters were full of outrage over the fact that Herb had once more cheated Madam Guillotine and he still on the air making waves. Some were furious due to the fact that they had given financial support to certain political candidates and nothing permanent had been done to rid the airwaves of this "pest", KV4FZ. (Ruth Hoffman even conveyed gifts to officials at the FCC in attempt to bribe public servants. One such official, William Cross, was investigated for leaking internal information to Ruth Hoffman in the KV4FZ matter. Hoffman then disseminated this information for use in the hate campaign against Herb.)

KV4FZ then was subsequently forced to embark upon a long and costly struggle for justice. He has had to fight the refusal to renew his amateur

license by demanding a hearing before the FCC. (The refusal to renew is rarely used as a procedure and has been given the title: "The FCC Death Penalty" because the entire burden of proof is placed upon the licensee.) At the first FCC hearing, Administrative Law Judge Luton ruled against KV4FZ. However, upon higher review, the FCC General Counsel refused to accept Judge Luton's findings and remanded the matter for reconsideration. The principle issue is whether or not KV4FZ had used amateur radio in the furtherance of the commission of a crime. This time the ALJ ruled that there was nothing in the evidence (The Miller Tape) that was illegal in any way. The concluded that Schoenbohm actually was dialing ordinary and valid Virgin Islands telephone numbers. He was not entering illicit access codes to make long distance calls.

The ALJ did, however, agree with the Wireless Telecommunications Bureau (WTB) assertion that, by giving out the telephone number, in 1994, of Herb's future boss, Congressman Frazer (whom, incidentally ran Delugo out of office), Herb was violating a solicitation restriction of ex-parte rules. This was despite the fact that WTB had conceded that no actual ex-parte violation had taken place. The ALJ ruled that, by attempting to explain his conviction as a De Minimus violation rather than a crime of major impact, he was trying to mislead the trial of fact. (In administrative law, the assertion of innocence is a crime even if the accused is actually innocent! It is akin to Hobson's Choice or the Salem witch trials whereupon, if the tied woman is thrown into the pond, and she does not drown, then she must surely be a witch and, thus, must be burned to death.

Herb had been fighting the remaining count through the Federal Courts and has even succeeded in convincing the courts to severely criticize the DOJ for their handling of the case. Nevertheless, they refused to reverse the remaining conviction because of the nearly impossible to define "standard of harmless error". The appellate court ruled that the motion for Judgment of Acquittal had been filed too late even though the trial judge had granted an extension based on the emergence of irrefutable proof that the prosecution had used false evidence. As a result they were barred from considering the sufficiency of evidence matter at this late date under the rigorous standards of Habeas Corpus review. However, a positive revelation in the latest FCC decision is that it clearly vindicates Herb on the original charge of using ham radio in the commission of a crime. It also conclusively proves that his detractors engaged in perjury before a Federal Grand Jury and Petit Jury trial.

Many on the local scene recognized the truth. The Trial Judge, The Honorable Ann Thompson, wrote a letter of support and praise on Herb's behalf. The Governor of the Virgin Islands did not simply restore Herb's government career. He elevated Herb to a position of higher authority with more responsibility to the island and a significantly higher salary. He was also employed, as a part-time field representative, on the congressional staff of newly elected Congressman Frazer.

The FCC WTB attorneys characterized these as "political jobs", unworthy of consideration as a mitigating factor in Herb's "rehabilitation"!) Although Herb had a Congressional Floor Pass, granting him direct access to the ears of the

politicians, there is no evidence that he ever abused his position to lobby House members against the FCC. This is in spite of the fact that the bureaucrats inside the FCC are very much afraid that Herb might just whisper in the ear of someone who controls their finances. Because of this, Herb is not allowed to take his case to the very people who would be horrified to learn the truth about how he has been treated. These are the people who could finally put a stop to this travesty of justice. Yet, Herb's detractors are on the phone daily, pushing those in power to get him off the air, one way or another. When will the voice of reason and justice be heard?

Some of us do not like the odds and are willing to help end this fiasco. Herb's legal bills are soaring but he continues the fight. His attorney, Larry Colby (a licensed ham), has stated that when this issue gets into the proper arena, Herb will be totally vindicated. But this can only happen if Herb is allowed to fight on and get his case into the proper arena. Right now, it is still in a forum where all the rules are stacked against the licensee. When the matter gets out of the FCC, and into the D.C. Circuit Court, then the playing field is closer to being balanced. There, the Feds don't have the automatic upper hand that allows them to do what their political puppet-masters demand.

A small donation of $25, $50 or $100 will go a long way in continuing the fight for justice. There is an underlying principle that must be preserved. It is not keeping Herb on the air that drives his supporters. It is the realization that if they can deprive KV4FZ of justice then they can deprive any of us of justice. Today they are persecuting KV4FZ. Tomorrow it could be you. You could be railroaded just because somebody doesn't agree with your position on the nets, phone patching, or apple pie. Herb is working vigorously to get the funds together for his appeal. His attorney Larry Colby is attempting to get an extension of time to file exceptions. If you can help in anyway, please contact John Dillenger, K4GFM, who is the custodian of the Defense Fund.

976. Origin of "Zulu Time"?

Eimac used tantalum as the getter (post-production vacuum maintainer) in its glass power tubes' anodes, which is one reason they had to be run at or near ratings, which made the anodes alarmingly visible to the uninitiated. A 'cherry-running' amp was a good one <G>

Dunno what Amperex, RCA, et alii did for getters in their graphite anode bottles. I think I remember the telltale silvery coating on RCA 813s, indicating that baking after evacuation got those pesky leftover ions. One asked for trouble if one ran a graphite anode visibly hard, tho.

Nice try, Timmy. The term "Saturday Night Special" became a media buzz word in their pro-registration blitz around 1967. The term may have been around some before, but this is when it was popularized, thanks to our all-knowing media.

They referred to cheap handguns (revolvers and semi's) with melting points below that of higher quality products. It seems that the cheap guns would melt somewhere in the 400 degree F. range, while the name brand ones would withstand temperatures up to the 700 degree F. range.

As a result of this media blitz, a number of the lower priced handguns were made illegal for sale. And a handgun purchase (at least where I lived) was no longer a "cash and carry" transaction. You had to fill out a form. I even had to sign for the purchase of a box of .22 shorts that year.

Remember the "Baretta Panther"? It was a .22 semi pocket pistol. You could mail order it out of the back of Popular Mechanics for under $10.00. Those ads disappeared during this time.

According to Rosie's crowd, every gun made would have been a "S.N.S." But a better term has come along. Assault rifle. So now all guns are assault rifles. Pump shotguns, Thompson Contenders, you name it .. they're all assault rifles according to the media elite. You gotta love what they come up with when we let them do our thinking for us.

Here we go again ..
>Gentleman, Please read this this.......
>
In the singular, it would indicate that there is only one gentleman on RRAM. So he alone is allowed to read this post. I did not take the liberty, thank you.

Actually there are several who post to and read from this N/G whose conduct is gentlemanly. Among these, (IMHO) would be KK7HO, N8WGM, Kevin Strom and, of course, the Radiosigs-Guy.

I did not say they were all friends, I said they conduct themselves like gentlemen. There are others, but this list is sufficient to demonstrate an identifiable plurality. Perhaps one of these is worthy of reading the post about KV4FZ. Or perhaps the honor will fall to another. Will we ever know? (Will we ever care?)

Aha .. the terms Hero and Mentor .. all bases covered. Almost. My personal perceptions come into play here, so bear with me. And feel free to oppose or elucidate.

A hero is admired, but does not always motivate or inspire one to a nobler state. A mentor, on the other hand, is one who leads another to somehow achieve a better state of existence.

The first is a "gimme". Who's to say one way or the other. It's a purely subjective call. One is free to have one's own whims and fantasies. The second one .. wellllll .. it leaves me hanging .. if you know what I mean.

You really should knock. Reno's Rangers always knock. They knock the door down. Then they do whatever they want. Snatch kids. Burn kids. Whatever.

So at least you should knock. So your manners will be as good as those of Reno's Rangers.

Why the devil does Herbie have to write a brand new brief to the Supreme
Court? I'm sure it has an E mail address so why not simply and copy and
paste this tripe to them to save time but then again Herbie is out to buy
time until Bush gets elected and packs the Court with rightwing crotch
scratchers while simultaneouly disabling the ham radio arm of the FCC?

The G.P.S. system did drop the 'S.A.' around May 1, 2000..... The accuracy is much better now... I have a cheap Garmin Etrex, and I have usually enough satellites locked in to give me a readout that says 'accuracy range: 20 ft.'.... (I have even seen 17 feet.) It used to vary from 20 to 300 feet with SA.....

SA could be re-envoked, but only if a war erupts.......

> Colin ZR5ADZ from Zululand

The time zones are lettered (I do not know if Alpha is UCT + 1 or - 1)
omitting I and O so the time at the prime meridian is the Z zone. In the
current phonetic alphabet, Z is Zulu. It was once called Zebra time in the
old military phonetics.

The message headers in the old military anyway included the date and time
and the z was used to indicate GMT rather than local. Right at the moment
it would be 200006171736Z in the header.

Make sense???

Right on Pete and we need more hams with guts like you to step up to home plate to tell these Christian Coaltion pests where to go.
Two weeks ago I spent the weekend in Lexington, Mass. and drove up with my cousin and her husband Bob. Bob is 75 and HAD been a registered Republican since 1946 having voted that ticket continually.
Going up on I-95 there was a major accident producing the worst traffic ever seen and after sitting in it for 2.5 hours, I asked if he'd take the wheel. As we tried to get off I-95 to have lunch in Greenwich,CT, he shocked the hell out of me by saying that he had switched party affiliations. Bob now was a registered Democrat.
I looked at him as if her were joking because the man had always been known as "Mr.Republican" in the family.
He told me why. Was sick of all this religious crap tied in with the G.O.P. Agreed wholeheartedly about G.O.P pandering to the religious right which is trying to destroy the Constitution by creating a semi-theocracy. Furthermore he was incensed over the G.O.P pandering to the gun lovers too and if there's anyone who knows about guns it's he, an N.R.A. member who dropped out.
It was that abortion issue that annoyed him the most. It's the issue that helped get Clinton elected twice and it's the issue that'll put Gore in the White House.
I, like he, HATE the idea of late term abortions. They are ugly,despicable, abominable and hateful and should be STOPPED. But to deny a woman from the outset of a pregnancy HER right to abort that child is LIKEWISE ugly, despicable, abominable and hateful PLUS DEMAGOGIC. It is un-American and contrary to the very fundamentals by which we have lived for 124 years. Politics for the politicians. Religion for the clergy and never the twain should meet. Mark that one down.

This is an odd response from that side of the political
spectrum which considers the Constitution a "living,
breathing document." As long as you consider the
Constitution malleable, you have to accept the legitimacy
of the "other side's" interpretation, no?
This demonstrates the folly of trying to reinterpret law in
light of contemporary fashion, which is what "liberalism"
is all about.

> >

Now, a very good logical argument, that.

Why is it so hard to believe? Are you going to create problems between me and the Dean? Sorry old top, I am the Dean. Be that as it may and back to politics. Are you aware of the removal of the confederate plaques over in Texas? These were the plaques hanging in the Texas Supreme Court building. 'Seems they were removed in the dead of night with the full collusion of Bush and his staff. From all I can gather, this is going to cost him a ton of white voters without picking up the first black vote. The real punch line, if one could properly call it that, is that the court building was constructed with monies from the confederate pension fund. As a consequence, you could well be correct in your prediction of the outcome of the November election. Though certainly not in the way in which you had originally intended. Is either man evil personified? Certainly not. Now get a life and enjoy the trip on the cattle boat. 73 Wolfie, aka the "Phantom of the Phrequencies"

Actually, I said, you're almost right. It's not the business of
government. But the real crux of the argument is found in this
statement:

> But to deny a woman from the
> outset of a pregnancy HER right to abort that child is LIKEWISE ugly,
> despicable, abominable and hateful PLUS DEMAGOGIC.

You've said a lot. Not much of it very nice, and only some of it
accurate.
The key word you used is 'child'. That renders the debate over the
right of the fetus moot. It's a child..and now you have a legal
matter. Be careful what you say. Words have meanings. And you are
responsible for the consequences of their use.
What you fail to consider, is that a woman doesn't become pregnant
by herself. She enlists aid in this endeavor. And intentional or
not, once conception takes place, she's no longer the sole
individual involved. To say that she is, is to play into the
political gambit that has resulted in the loss of father's rights in
this country for the last 40 years. If there is a decision to
terminate the pregnancy, it must be a decision mutually agreed upon,
and openly and candidly discussed. Abortion is not birth control.
Birth control is prevention. Abortion sweeping away the consequences
of not taking the preventative steps.

For now, the issue of the humanity of the zygote is still under
debate. So it doesn't have a position. That may change as science
further studies the issues in this matter.

But the matter is NOT a matter the goverment should be involved
in. It's a matter for the woman, her partner and their consciences.

And as far as the religious right is concerned...they, too, have
a voice. And a right to exercise it in this country. That is also
Constitutionally guaranteed.
And for the record...the Constitution doesn't proscribe religion
in the Republic, or the government's countenance of religion in the
republic, the Constitution only precludes the formation of a state
church. The two are quite the distance apart from each other.
Reading the writings of Madison, and Jefferson, one finds that
the foundations of the principles of civility and justice were

founded in Christian principles of decency. This dating back to the post Crusade years in England. Read Madison and Jefferson, they not only acknowledged, but embraced Christian ethics and used them as a guide when constructing the government of the Republic. They expressed such things openly. They were very specific to state that these were Christian principles. So the only separation of Church and State in the Constitution, is the proscription regarding a State Church. The doctrine of the Separation of Religion and Government which you advocate, is a construct of a very tortured court decision in the 60s where in an attempt was made to rid the Republic of any shred of its Christian ethical foundation. Which paved the way for much of what we have now.

The Right is not the enemy in this country, Doc. Apathy is. And it's Apathy that will cast the most votes in this election, as it did in 92 and 96.
Re read your recent history. Clinton wasn't elected by a majority. He wasnt' elected by a majority of voters. He pulled less than 44%. The writing on teh wall is not as clear or as bold as you might think.

Greetings,

To expand slightly. from: http://www.cl.cam.ac.uk/~mgk25/iso-time.html

"
In order to indicate that a time is measured in Universal Time (UTC), you
can append a capital letter Z to a time as in

23:59:59Z or 2359Z

[The Z stands for the "zero meridian", which goes through Greenwich in
London, and it is also commonly used in radio communication where it is
pronounced "Zulu" (the word for Z in the international radio alphabet).
Universal Time (sometimes also called "Zulu Time") was called Greenwich Mean
Time (GMT) before 1972, however this term should no longer be used. Since
the introduction of an international atomic time scale, almost all existing
civil time zones are now related to UTC, which is slightly different from
the old and now unused GMT.]
"

Regards,
Jim

Message-ID: <sko6aldcis4146@corp.supernews.com>
Source record: 109014

Let's be objective an accurate. I am looking at the CDC report.
It is in my hands. Mine is dated 1999 for year 1997.

>In 1994, firearm injuries were the second leading cause of death for
>young people, 10 to 24 years of age and the third leading cause
>of death for persons aged 25 to 34. (Centers for Disease Control).

Bzzzzt...wrong. Using your source. CDC, National Vital Statistics Reports,
Vol. 47, No. 19, June 30, 1999. The leading cause of deaths in this age
group are from motor vehicles. I cannot believe it is that much different
now
over 1994.

>In 1997, 32,436 Americans were killed with firearms - in homicides,
>suicides and accidents. In comparison, 33,651 Americans were killed in
>the Korean War. (Centers for Disease Control).

Using your source, CDC, the number of Americans killed by homicide was
13,252. How any sane person can count suicide as gun violence is beyond me.
If the 17,566 that used guns to kill themselves had used knives, what would
be
your response? Ban knives.

4,724 people were killed by drowning. Do we ban pools and swimming?

12,555 were killed by falling. Should be ban walking and running? After
all,
this is only about 5,000 less then were intentionally killed with guns.

Of all the injury deaths which amounted to 146,400; only 13,252 or less than
10%
were intentionally killed with a gun (excludes suicide, I mean if you are
going to kill
yourself, who cares what the method is). Seems like a lot of things are
killing people
that we have to worry about first. Maybe banning cars? And driving a car
is not
Constitutionally guaranteed like owning a gun.

This post is so one-sided that it's difficult to lend it credence. It's written as if every event surrounding this situation was supposedly subverted by some omnipotent force - therefore, it's just not credible.

Even mediocre propaganda doesn't propose that the opposition is all bad and that it manipulates everything!

As a casual reader of this newsgroup, I'm not privy to all of the background of this apparent feud, but this is not a convincing way to make a case.

It's hard to believe that a fine ISP such as UUnet would allow themselved to
be part of this anti-Semitic crap tossed at me.
I don't need any of your Christian prayers since they're all stolen from the
Old Testament itself and don't give me any lip about the rite of
circumcision because the Eastern Orthodox Church celebrates Christ's.

Obviously, you're correct. Of course, the ACS group *I* belong to has a bunch of cops(city/county/and state patrolmen and detectives), firefighters, EMT's, nurses and the occasional public utility guy like me; along with the retired schoolteachers, etc. Kinda blows away THAT theory.

I'd guess that the professionals have chased most of the wannabes away. The city/county/ state guys just keep asking us for more. No black eyes, sometimes a few sore muscles. I guess we no-codes and restructured HF'ers are doing THAT all wrong, too.

"...Fat, lazy,... " Hmmmmm, bunch of us were up "on the mountain" installing a new repeater/link system for most of the infamous "Black Saturday" (April 15, 2000). One of the cops and I were swaying in the breeze above the sight for 6.5 hours, hanging antennae and hardline. Fat, lazy, semiliterate people don't climb with me...but, then again, I became a professional (Land Mobile Radio) long before I became an Amateur.

> No, we see the wild proliferation of guns into the hands of murderous
> nuts as dangerous to all of that.

Indeed! So what better way to deal with 'murderous nuts'
than to simply disarm the people they prey upon. Typical
liberal emotionally correct thinking.

Approx. 14,300 people were killed by *firearms* (not just
handguns) in 1996. Approx. 16,700 people were POISONED
(drugs, food, gases, etc.). Approx. 12,000 DIED FROM
FALLS. Another 10,000 suffocated.

In a free society, these numbers represent
people living lives as they choose. A 'murderous

nut' will KILL with a gun or without a gun. That
is WHAT 'MURDEROUS NUTS' DO! It is mandatory that
a 'murderous nut' kill at least one person before
being allowed to attend 'murderous nut' lodge meetings.
There exists 465,782 very effective methods to kill a
person easily without a gun. Blowing shit up is
one of them. For now, 'murderous nuts' prefer
handguns. Just be glad they do.

Well said! Liberalism is also about emotional gratification,
not intellectual gratification. People like Avi can not
separate their feelings from analyzing and solving
problems. This explains why Avi refers to me as a
'grease monkey'. He thinks it's an insult, not a badge
of pride.

Fact: Liberals make lousy trouble-shooters. But Liberals
do insure their job security.

> > > With all good wishes,
> >

Actually, I don't think Avi meant any disrespect since liberals dominate the population of those who really do cram things up their ass. This may have simply been his way of expressing "Have a good one".

You don't know Strom, do you?? One of those almost benign neo-nazi racists,
hell bent on ridding America of "mud races" and race traitors. Do you think
a moron who wants to try every person who doesn't accept his racist doctrine
has any regard for the constitution??

Think again

> This demonstrates the folly of trying to reinterpret law in

Don't overlook the up-side, Timmy. Giving the Liberty Net uranium powered amps could cause them to be heard in China.

What a fine way for the Maoists to learn that the pipeline is closed. They'd probably hunt down Komrade Klinton and demand a refund. And when they found out he'd spent the money, they'd probably take him for a "leeetle rrrrride". On the train to Mena. Or to Chappaquidik (sp?).

KK7HO warns:
>Doc your Christian slamming rhetoric IS getting very old.

Slow down, Timmy .. it's part of the master plan. It's part of the voter mobilization program the Radiosigs-Guy is running for Governor Bush. See, Timmy, lots of Christians are also taxpayers and gun owners. Which means we need them at the polls this November.

So leave the Radiosigs-Guy free to irritate and agitate and aggrivate .. whatever it takes to keep "The Amazing AlBore" (inventor of the internet and Coca-Cola and nuclear energy and jet propulsion) out of the White House this November.

At present, the Radiosigs-Guy is preparing for a trip out of the country to meet with Governor Bush, Jesse Helms, Wayne LaPierre, and Pat Robertson. If these guys team up successfully, The Amazing AlBore will be lobbying for higher tobacco price supports next year, instead of passing executive orders about guns and national parks and diesel engines.

Ignore them all, Radiosigs-Guy. Full speed ahead. Get them Christians and taxpayers to the ballot box by the millions this time around.

Picture the headlines on November 7, Timmy .. "Bush Thanks Radiosigs-Guy for Landslide Victory".
Subtitle: "Liberals and Parasites Sulk as Christians and Taxpayers Jam the Polls".

What else are we to expect Doc, from these kind of trashy people
who obviously hang onto every word spoken on WWCR, WGTG
and 3950 as if it were the gospel trvth? You know, "christian identity"
scumbags and their ilk. Uneducated, unclean, disgusting people.

Look at it this way, you and me still get to live in our wonderful gated
communities in the suburbs, and these assholes will still have to live
in their trailer park "homes" located down the street from the auto
scrapyard.
(the type where their ham antenna's boom length is actually longer
that their trailer house. Ha Ha Ha ha!!)

Nobody's slamming Christians but when a goyische moron gets on here and
throws rocks at my heritage by saying that I need goyim to pray for me as if
God would pay any attention to them anyway, that's too much. And when some
goy but comes on here and slams circumcision, then it's my right to stand up
for my beliefs and bury the ignoramus which I did. Instead of slamming me
for standing up for my beliefs, I suggest you tell that stupid goy to stop
tossing rocks and all will be okay. How's that grab you?

No it isn't about materialism at all because plenty of very decent people do
not live in gated communities(I don't) however you are correct by alluding
to the rightwing nut Christiancasters on shortwave who are in reality
anti-Semitic s.o.bs. Their main mission is to use the Jews as scapegoats for
the lousiness they themselves create and therefore I feel obligated to rip
them to shreds. Somehow they think they have an in with
J..E..E..E..E..ZUS and will provide salvation as long as you give Him all
your love and THEM, all your money.

Peter,
I disagree with the statement. I say if the semen producer, be he husband or lover, demands the child be carried to term while the pregnant one says abort within, let's say, less than a month of carrying, the woman's desire should settle the matter entirely. And that's the way courts rule if the male decides to push the issue.
Regarding the religious issue, hear this. THE CHRISTIAN COALITION IS AS BIG A THREAT OR AN EVEN BIGGER INTERNAL THREAT TO THE CONSTITUTION OF THIS NATION THAN ANY EXTERNAL FORCE THAT HAS TRIED TO DESTROY THE U.S.A. The C.C. works by every devious means possible, the biggest of which is EXCLUSION, to first undermine, manipulate and take over local governments and every extension and attribute of them. The C.C. is a direct threat to the plurality of our society and the equality of every American and must therefore be exposed for the insidiousness and deviousness it represents. Furthermore my sentiments are likewise expressed by CATHOLICS in this nation who are disgusted by the constant attacks on their particular Christian expression.
The Radical Right attacks public education and tries to tear down the wall of separation between church and state to advance a frightening and devisive agenda and I'm so sure that it is at work right now to infiltrate and control school boards, library boards, local governments and other poilicy-making bodies throughout the country, I joined and donate to PEOPLE FOR THE AMERICAN WAY,2000 M Street NW, Suite 400, Washington,DC 20036. I give Bush credit for removing Confederate plaques and if you were the
Dean, you'd know Confederate is capitalized. He simply didn't want in Austin
the kind of backlash seen in South Carolina. As far as losing white votes,
makes no difference because when Gore gets through with him in the debates,
the white and black voters will then know what an overall loser is George W.
What I do like about him is his staunchness on capital punishment and I
wrote to tell him so. He's got guts but I hope like hell he's executing only
the guilty. Let him remain Governor of Texas and she'll become the safest of
all 50.
Put him in the White House and we're all in jeapordy.

A friend of mine asked me to help him find out the value and help sell his son's old HW-101, Matching speaker, and AC supply. The rig has been in storage for years and looks great! A couple of small scratches on the top cover, other than that, it looks brand new. Haven't tried it on transmit, but receive works ok with exception of some noisy pots and wafer switches. Great for collector wanting one that would be easily restored to mint condx. Asking $200. (Any ideas if that's close to the going price???)

I have an interesting chance to purchase some nice RCA AM transmitters from the 1940's to 1950's (and possibly earlier) in various stages of completeness very, very cheaply before they are broken up for parts and surplus.

First of all, does anyone know what models were made in that era and can give me the numbers and data?

I need manuals ; i.e. ; Parts, service, mainenance, owners, installation, etc.

Are original parts and tubes still available? If anyone has anything that will work with these transmitters email me with what you have and prices.

They will be made to go back on air by a local non profit AM radio station.

Thanks,

HMMMMMMM. I sold most everthig I brought to sell at the fleamarket, a couple things didn't move, thats ok by me, what gets my boxers bunched up are the tight ass f**kers that offer $25 for a XTS 3000, it's not worth more than that to them, but if it was on their table it would be priced even higher. Yes, I snapped up bargins on Thursday, maybe next year I'll start shopping on Wed., it is starting to be a good place to buy what you want because you certainly cannot sell to some of the morons there. Perfect example.... I had a used A7 spectra head on my table, priced right, a fella says to me, "didn't you have some new ones like this last year?" my reply was yes but I hadn't unpacked them he asked if he
could see one of the heads thatwas still packed up in the back of the truck, of course I asked if he was really serious as it was buried deep, of coure he had to see it before he could committ to the purchase, he kept wanting to know what it looked like, well... it looked just like the used one he had in his hand, only new. He was a mighty persistant fella, I finally told him to beat it, just another tire kicker in the flea market, probably didn't have all his change rolled up either. Just my .02, but after 3 days of that crap we didn't even bother setting up on Sunday. And yes, all prices are negotiable, to a degree, we all want a deal, remember, it's not where you styart but where you finish. SG

That's right. Someone has been putting my name in for magazines. The lastest attempts were received in todays (Saturday) mail.

A reply card from some horticulture magazine. This sadly failed, it was stamped "Returned for Postage" Cheap ass, too cheap to even pay to have my mailbox filled with crap.

The 2nd item was a subscription invoice for "Mother Jones" Whatever that was.

I'm keeping these as proof to use in a possible LEGAL ACTION - if this keeps up.

This is your only warning......

Those of you who are of the Christian persuasion could do Doc a BIG Father's Day favor.
You could say a little prayer for this diminutive Heathen and ask that his sins be forgiven.
If that does not suffice, perhaps you could refer Doc to a penile transplant specialist on the outside chance that he may be able to recapture his long lost manhood due to a circumcision gone awry.
Story is that Doc's Rabbi had too much Mogen David on that historic day and lopped off more than was intended. It wasn't much by normal standards, but to Doc it was catastrophic since he was only born with a few millimeters, anyway.

May I be so bold as to make a point here? Despite arguments that the Liberals wish to make, and despite their statistical claims that guns are bad I have this to offer...
Last summer, on a very hot and humid evening my neighbor (female) made the mistake of dozing off on her couch while her three children were sleeping upstairs. This gal had stupidly left the front door open with nothing but a screen door between her and the outside world.
What happened next was a shock to her and her sheltered little world.
A man who was homeless was wandering the area and pulling on doors of houses in the area to see what he could get into. As it turned out, this dude was high on drugs, but he did manage to open her "locked" screen door and waltz right into her house. She feigned sleep while this druggie rifled her house and even walked into the bedroom where her daughters were sleeping. This lady and her husband (who was not home at the time) are Liberals who do not think that people should own any kind of gun. She was panic stricken and in fear for the lives of her kids and herself.
Bottom line? She managed to grab her cordless phone while this jerk was rummaging around in her basement and called me, her next door neighbor for help. (I am a police officer).
I did go to her aid, and I waited outside in the bushes for this clown to exit after first calling my buddies to come to my aid. I got the guy at gunpoint as he left her house and cuffed him. End of story.
She and her husband are now thinking about buying a firearm of some sort and realize that this jerk could have gone nuts and done unthinkable harm to her and the kids while he was inside the house.
I did not enter the house when going to her aid because that could well have set this guy off....
I might close with adding that when he saw my duty weapon in his face as he exited this house, he decided to do as I told him.
By the way...he had broken into three other houses that same evening and had an arrest record a mile long.

No, A<num><letter><letter> is NOT a valid US call. Unlike the
prefixes, "K," "N," or "W," which are allocated by ITU to the US
exclusively, "A" is shared with other countries. The ITU allocated
the prefixes AA through AL to the US, other calls beginning with
"A" belong to other countries. The issue is further clouded by
the way the FCC has set up systematic assignment of AA - AL prefixed
calls. AA - AL prefixed calls are in Group A for CONUS stations, but
in Group B for stations outside of CONUS. So advanced class licensee
in Hawaii can be assigned "AH6??" whereas an advanced class licensee
within CONUS would not have an AA - AL prefixed call assigned. Certain
"second" letters of call prefixes are only available to stations outside
of CONUS. Those being H, L, and P. But "P" only works with K,N, or W
calls. "AP" is not a valid US call. So only "AH" and "AL" prefixes
are typically assigned to non-CONUS stations in the Alaska or Pacific
regions out of the available block of A calls allocated to the US.

I'm not particularly concerned about the enactment of laws that deal with the purchase, sale, or use of firearms in this country. There's no Constitutional language that says congress can't make a law regarding firearms, but you'd think there was from the way that some people get so bent out of shape about it. There IS Constitutional language that says congress shall make no law regarding religion, but the only language that has anything to do with firearms is that we have the right to bear arms.

"To bear" means to carry on one's person, and this couldn't be plainer. "Arms" are weapons, so this can refer to ANY kind of weapon. So, theoretically, one could make an atomic bomb and carry it around. This is how the Constitution reads to ME, anyway.

What I don't understand is why I don't see press regarding the challenging of the Constitutionality of some of the laws that have been enacted. For instance, there's a law in Massachusetts banning slingshots. Now, if I had the time and money, I'd like to make a slingshot, and carry it around in plain sight until I got busted, so that it could be carried all the way to the Supreme Court, and appealed on the basis of my Constitutional right to bear arms. I mean, I NEED a slingshot on Field Day to get the wire into the trees!

Is the NRA financing the appeals of cases that violate this fundamental right? The only way the Constitutionality of any gun laws can be challenged is to have someone suffer through this process.

Where are the gun cases? I mean, if the NRA is REALLY defending the Constitutional right to bear arms, I should think that the only way to be effective in that fight would be to challenge the Constitutionality of ANY of the limits that have been placed on this fundamental right to bear arms. And the only way to DO that is to have someone get busted, and then suffer for years through the arduous process of making a challenge in the Supreme Court. That's the way it works in the country, isn't it?

Is the NRA actively engaged in finding and defending cases to make Constitutional challenges of this nature? If it's NOT, then I'd have to assume that they're apparently engaged in something else...

If memory serves, the Yaesu series uses a BR-1225 or BR-2325
lithium coin cell (made by Panasonic) with standoff legs.

These lithium cells usually last 3-5 years.

Theuy may be found at either:

www.digikey.com

www.mouser.com

(mouser has no minimum order policy - Digikey has a $15 Min)

Price of these batteries ranges from $5 to $7 each.

There is a bit of international politics in the story. Seems in the late 40s we had a number of independent countries needing callsigns. Having lost the war, Germany got to give up part of D to the Philippines while Japan donated part of J to TransJordan. We donated part of A to Pakistan and Israel to this day uses part of a UN allocation.

A# is primarily allocated to the United Arab Emirates with D# and J# in use as well. For what it is worth, aircraft use the same system so you can tell where your movie or TV show was made by reading the numbers on the helicopter.

This is the problem. There is absolutely NO WAY that
this moron should have been wandering out among
law-abiding society.

"Fartsack" also took the liberal victim of the home
invasion to task for having only a screen door between
her and the outside world. That is perhaps justified.
I have noted on my visits to many parts of California
that a bizarre form of "prison reform" has taken place
there, with honest citizens locked up with steel bars
and triple-locked doors, while dangerous people with
arrest records "a mile long" roam freely in the
streets.

It ought to be the other way around.

Until it is, I think honest citizens ought to reserve
the right to self defense.

Foolproof gun control: 1.) NO guns in prisons. 2.)
NO criminals outside of prisons.

1076. Heathkit ET-3400 & ET-3400A (question about ETA-3400 option)

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-19 00:00:00 UTC
From: "Robert L. Doerr" <rdoerr@bizserve.com>
Message-ID: <394E26F9.1D36069A@bizserve.com>
Source record: 108837

Hello,

I have two old Heathkit Microprocessor trainers. One is an ET-3400
and the other is the newer version ET-3400A. From what I can see
there are only a couple differences between the two. The early
version uses four memory chips, and a 6800 CPU while the newer
version uses two larger memory chips, and a 6802/6808 CPU. Other
than that I believe they still should operate the same way.

With these two units I have two ETA-3400 expansion options. I tried
them both with the early version of the ET-3400 trainer and they work
just fine. I have tried both units with the newer ET-3400A trainer
and can not get either one to work. Both of the expansion options
have the full amount of memory installed.

1) Is there anything special required to make one of these options
work with the newer trainer ET-3400A?

2) When using the expansion option do you have to remove the existing
memory chips from the trainer?

3) Does anyone have a copy of the manual for the 6809 daughter card?

Thanks in advance for any help on this.

Regards,

Robert

the antenna that you have in questions would have a extra 3 db gain
that would give you 13 db
now if you add another beam it would not give you 3 db
but it would only give you 1 db of gain and os on and soforth
hope that this will help

Hi all;

Looking for a single paddle morse paddle, same as or similar to
Hi-Mound model MK-704. I don't want an iambic (double) paddle,
please. This is for my own use, I am NOT a collector. No-name,
no-brand is fine, but must be good quality/condition.

What do you have?

Please contact:

Larry, K1CWZ at l.spinak@spikraft.mv.com

or call (603) 889-0908

Thanks, and 73

1083. Wolfie phones gay sex lines!

Source record: 108845

From URL:
http://www.ess.sunysb.edu/fwalter/CEN511/time.html

Since the day is 24 hours long, the angular velocity of the Sun is 15
degrees per hour. Civil time consists of 24 time zones, each 15 degrees
wide, centered on lines of longitude which are multiples of 15 degrees
(there are local variations).

Thus I make it 24 time zones i.e., 15Deg x 24 = 360 Deg
Zone M and Y are the same but different day
==========
From URL:
http://www.timeanddate.com/time/abbreviations.html
Other letters/words are used for other time zones than UTC, most based
on the right or reverse order of the Alphabet,
although 'J' is skipped ('J' refers to current local time of the
observer) (there are 25 time zones defined here, but 26 letters in
the alphabet), Zulu is an exception to this, in the middle, here from
the International Date Line, going west, until the
International Date Line is reached again.

>So, fellas, let's have at it -- objectively. How effective is membership?

I call it a bargain. I've been licensed for 25 years and I've been a
member for most of them. The only reasons I've allowed my membership
to lapse was because I was either (1) overseas or (2) didn't renew in
time (I'm lazy too).

Here's the deal: You can research and comment on every motion against
ham radio that congress and the FCC can conjure up, or you can join
the ARRL. When I've had the time, I do both. I can say with some
authority that the latter will net you 80% of the bang for 20% of the
hassle.

No, I don't always agree with the ARRL. If I feel strongly enough,
I'll comment to the politicians personally. But otherwise, I think
I'll hang on to my membership.

WARC promises to be a royal spectrum grab, particularly on the
valuable VHF and UHF frequencies. I won't be privy to all the
machinations and politicking the ARRL will be doing, but I'm glad
they're doing it and I'll support them.

Hi Larry -- I have a Kent single paddle brass key. Tis tarnished as
brass does. The plastic paddle part broke and I replaced it with a like
size PC board material -- won't break for sure. Otherwise -- nice
condition. Reason for selling -- someone sold me a single paddle Bencher
for a nice price -- which I use now.

Make me an offer on the Kent.
New price is PL-PK103 KENT SINGLE PADDLE

Heck, the only welfare hams I can think of are the codgers (we know who they are) who haven't taken a test in so many years that I doubt they could pass it again. We know where the real "welfare" lies: It's for all those geezers who haven't looked at their license tests in years. Even if presented with their original tests, I doubt most of them could pass.

Yeah, we all know who the real "welfare" hams are. Those who live in glass houses shouldn't throw stones...

> hope that this will help
>

Time to straighten these things out. Stacking two identical beams can actually give you a shade more than the expected 3dBd of gain. Spacings etc have to be on the nose to get the higher figure.

By and large 3db is about right but you also have to take into account the losses in matching systems splitters etc. A good rule of thumb is that every time you double the size of the system you are going to see around 2.7dbd of extra gain. With this figure in mind the law of diminishing returns will not come into play.

Remember that if you are going to stack two beams [especially VHF and above] It makes sense to stack them one above the other. This way you get the extra gain by robbing the vertical pattern. To put it another way, the beamwidth does not narrow down in the horizontal. Stack them alongside one another and you get the extra gain by stealing from the horizontal pattern and the horizontal beamwidth tightens up.

Peter Maus, you TRIVIALIZE the machinations of the Christian Coalition while I MAXIMIZE its deleterious effect on the health and welfare of this nation because of one main reason-it deserves to be.
No ostensibly patriotic group, whether religious or secular, is so well organized and funded as it is but the truth shall set us free of these parasites.

You equate the CC with Protestantism in general which is wrong. Am I wong in saying that the only denomination in Protestantism that's dedicated to convert the world and literally taking control of this nation is that CC? Just think about it. When was the last time you heard control freak loonies speak for example on behalf of Lutherans, Episcopalians, Presbyterians, Jehovah Witnesses, Seventh Day Adventists and every other denomination aside from the Evangelicals? The answer? Never. All worship Christ and more importantly, THEY MIND THEIR OWN BUSINESS. To the contrary, the Born Agains have six inch diameter heads with St. Lawrence Seaway mouths.
Does the CC have a right to spout off? YES. Then again, do those who understand what they're all about have a right to sound the clarion? YOU BET and I'm helping do it.

Let me explain it this way. My first election was in 1960 and since then I have voted Republican for President in '64, 68, '72, '80, '84 & '88. And if John McCain had beaten out Bush for honcho in 2000, there's a good chance I'd be pulling the lever for him this coming November. Why? Because McCain had the guts to stand up and tell off the CC for what it is. INVASIVE MEDDLING GARBAGE! On the other hand, Bush panders to them just as his dad did and so there's no chance whatsoever I'd ever consider the big W. in the next election.

Plain and simple-- the Democrat party is ANTI RADICAL RIGHT which puts me squarely in Gore's camp and if I can help out the DNC by ringing doorbells campaigning for Al, I'll do it. That's how anti-G.O.P. I am for kowtowing to these fraudulent religious bogeymen. And the worse part of it is that the religious right has so infiltrated and undermined the G.O.P, that the Republicans have become as mean spirited and intolerant as they.

Careful, you'll choke on that bile.

> You equate the CC with Protestantism in general which is wrong. Am I wong in
> saying that the only denomination in Protestantism that's dedicated to
> convert the world and literally taking control of this nation is that CC?

Yes, you are. By its definition the Christian Coalition is NOT a
single denomination. Nor is this organization interested in
controlling the world. They only want the right to teach their
values without hindrance or interference from the state. Which is
their right. A right which is currently infringed on numerous
fronts.

> Just think about it. When was the last time you heard control freak loonies
> speak for example on behalf of Lutherans, Episcopalians, Presbyterians,
> Jehovah Witnesses, Seventh Day Adventists and every other denomination aside
> from the Evangelicals? The answer? Never.

Interesting you should bring this up. I had an employee of mine, a
Presbyterian, dragged by her husband before the Session, to answer
for her working in the broadcasting industry, for my company,
producing a show on weekends at a night club in Chicago. She refuse
to accept their decision and was threatened with excommunication,
and funding a court action to have her declared unfit toward the
goal of having all future custody issues decided in her husband's
favor. She denied their right to make such a claim, ultimately sued
for divorce, and the Session interceded on her husband's behalf,
funding his attorney fees to contest the divorce. The issue dragged
on for 2 years, and cost her thousands. Now THAT's a control issue.
Presbyterians. Got it?

Seventh Day Adventist are no less control oriented, and their
fundaments leave the church to follow their devotees into the
secular world as well.

The Christian Coalition speaks for many denomination of
Fundamentalists.

> and All worship Christ and more
> importantly, THEY MIND THEIR OWN BUSINESS.

Really. Ever been a Lutheran dating a Catholic? Everything but
the surgery within the first two weeks. Ever been a Christian in a
Jewish family? Ever been a Jew on a restricted Golf Course?

Don't try to tell me that fundamentalists Christians are the only
ones who don't keep to themselves. The facts do not support this.
What's more, you know it.

> To the contrary, the Born Agains

Just the way Kennedy pandered to the Vatican. You seem to recall
that there was bitter division along Catholic/Protestant lines in
that election. Specifically over the influence the Church would have
in teh Capitol. You mean you haven't wondered why, with the numbers
of Catholics in this country, we've had only ONE Catholic President?
Simply because of the fear of a Church influenced Capitol.
Interesting also that there was no such fear of the Baptists,
Quaker or other fundamentalists that took the White House. Despite
the obvious and openly admitted influence of their religion in their
decisions.

Because there are fewer Quakers, Baptists, and other
Fundamentalists than Catholics. Safety in the numbers, you know.
But put a Catholic up for the office and you can hear the fabric of
the nation rip.

You forget that. Conveniently.
>

Mean spirited? Intolerant? Alec Baldwin on national tv called for
the rushing of Henry Hyde's home, the stoning of Hyde, and the
murder of his family. And not a single Democrat spoke out against
him. Not one.

When you find anything in GOP speech that calls for violence and
murder, I'll let you tell me about mean spirit and intolerance.

Till then. Keep your chin up.

Source record: 108857
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.dx

I would appreciate any help finding an on-line directory for Swiss or French 2 meter and 70 centimeter repeaters (e.g. location, frequencies, offsets, tone if any). I will be in the area around Interlaken in Switzerland, and Albi, near Toulouse, in France.

I have not operated in Europe before and so would appreciate any information about repeater use conventions (I do have a copy of CEPT requirements). I have a T81A, and was told that broadcasting the "3" dialtone should bring up European repeaters. Can anyone validate this?

Please forward replys to my mail address.

Thanks in advance.

I am not a ham. I have a question though and thought a ham could help. I was a given a mobile scanner. I want to put it in my mini van. I don't want to make the thing look like a porcupine though. Is there a splitter or could someone tell me how to make one, to use my AM/FM antenna to operate both my radio and my scanner. Thanks.

And remember, that figure probably includes those who were killed while attempting robbery, rape, or murder -- in other words, it includes those who were killed justifiably. In such circumstances, of course, decent men are glad that the innocent were protected because they or their protector owned a gun and used it properly.

The Mutual Network reported a few weeks ago that some 96,000 die annually due to _hospital error_ of one kind or another.

Clearly, hospital error is a far more serious threat than guns or skinheads or any of the phony bogey-men put before us by the liepapers as excuses for giving up our freedom.

With every good wish,

And you and I will disagree on this point. She is not the sole
participant. And that you refer to the man as a 'semen producer'
says a great deal about your regard for the father, father's rights,
and the ultimate value of the father in the relationship. It's not
to be a sole decision, but a partnership. It should end as it began.
How the courts rule is a matter of law, and also a matter of
politics. It is often how they rule. But consider that the logic
that gave way to Roe v Wade has been successfully challenged in
recent years, and the political tide is turning away from that
decision. There is a good chance it will be overturned. Not anytime
soon, but it is, you should pardon the expression, coming.
You're right about one thing, though...it was on this issue that
Clinton gained his largest block of supporters. But as indicated by
the fact that more than 56% of those casting ballots voted AGAINST
him, this position is far from a majority opinion.

> Regarding the religious issue, hear this. THE CHRISTIAN COALITION IS AS BIG

> The Radical Right attacks public education and tries to tear down the wall
> of separation between church and state to advance a frightening and devisive
> agenda...

Nicely loaded language. Very well done. But fallacious at the
premise, and throughout.
Again, there is no Constitutional provision for a separation of
church and state, only a proscription that no SINGLE denomination be
installed as the State Church. And the Christian Coalition has as
much right to be heard in this country as any other group. That they
have an agenda is hardly any surprise, nor an insidious revelation
of truth. Virtually every group within the borders, and apparently a
few without, have a political agenda. They are but one...and a
pretty tame one at that, by what I've been reading.
And that your views are concurrently expressed by Catholics is no
great surprise, the entire Protestant movement began as protest to
Catholic doctrine. That's a matter of definition, hardly a yardstick
to measuring political truth. A matter of fact for 400 years. You'll
have to find a better supporting cast.

> I'm so sure that it is at work right now to infiltrate and
> control school boards, library boards, local governments and other
> poilicy-making bodies throughout the country,

I'd say you're absolutely right. But, no more so than Jesse
Jackson's Rainbow Coalition, GayLib, FemLib, any number of labor
unions, as well as the Democrat party, AND Corporate America.
Every group with a plan has been working to influence policy
making bodies in this country for decades. Jackson's interference in
Decatur was exactly that. Political Correctness and Sensitivity
Curricula on our college campuses are the result of any one of a
number of pressure groups trying to effect change. Democrats have
been working through the schools to hammer their parents on voting
issues since I was in school (I could tell you stories about the
letter writing campaigns in newspaper editorial columns that made it
difficult for me to go both to school or home), and Corporate
America has been trying to purchase High School and College
Curricula to meet their own needs since before Rockefeller's
Standard Oil. There's no reason to expect the Christian Coalition to
sit idly by and watch every other organization on US soil make
political hay creating a society that not only cuts against the
grain of their tightly held values, but also mocks and makes sport
of them and the values they espouse as mainstream wisdom.
I dont' agree with everything that Pat Robertson says, Lord knows
he tried to put a CBN Station in the Holy Land....can you say
"Jihad?"..., but I also think that restoring some of the fundamental
values, upon which the Republic was based, stripped away over the
last 40 years wouldn't be a bad move. Just like I think that

Corporate funding of some business education programs is a good thing.

Man where is your sense of balance? Yes, the Christian Coalitions has an agenda to influence decision making bodies. So does the Communist Party. So did Jesse Ventura. If you're really open to the concept of diversity of thought, you have to acknowledge the Christian Coalition's right to speak. And you have an obligation to listen in the interest of the fairness you espouse.

Or is it that they threaten the libertine lifestyle you defend so heavily here? That you're afraid that they may be heard, and listened to? And that things might change?
Well get this, my friend...if that's the case, then you're in the same boat as the rest of us who worry that you might be heard a little too well, and that you may effect change...AND, we find YOUR doctrines to be just as much, if not more, a threat to the Constitution of this nation, in simple matters of law, than anything the Christian Coalition has ever suggested.

Welcome to the club, Doc. Take your seat...refreshments are about to be served.

See Timmy .. it's working. The Radiosigs-Guy is spearheading the greatest Republican voter registration drive in history. Radiosigs-Guy said he's the GREATEST .. and the statistics speak for themselves. He's bringing them in by the millions.

Thanks ycthulhu for posting the statistics. Looks like Radiosigs-Guy is going to hand Governor Bush a landslide to end all landslides. It's awesome. The KommieKrats couldn't match these numbers with Jesse Jackson, Al Sharpton, Queen Hillary and the Chinese put together working on their side. (Which is what they already have.)

Keep the information flowing in, ycthulhu. Taxpayers and gun-owners across America need the encouragement.

If that is this guy's motive in filing his suit, or brief, or whatever it is, he is in for a shock. Anyone facing revocation of his F.C.C. license, especially a ham license, is going to be off the air long, long before any changes to the Supreme Court or F.C.C. are made, and the people are in place who, theoretically, would be more "understanding" of his position.

He is facing an action that will go into force within another six months at most, and he is seeking a possible remedy that is 3 to 5 years out. Not a great plan, if you ask me. Straightening up and behaving within the law and like an adult would be a better plan, especially since it is probably false hope (thankfully) anyway that any newly constituted FCC or court is likely to be at all sympathetic to a rabble-rouser who flaunts his rules violations and attempts to cover himself in the mantle of free speech protection.

Dick Bash wasn't a KGB spy, he simply took advantage of what was
available in the public record. The FCC as a government agency
regulating domestic telecommunications has little to bear in terms
in terms of national security interests so its records are open in
terms of FOIA. Bash wasn't getting "away" anything, he simply took
advantage of something that had been open to public scrutiny all
along. The same charges were leveled at NASA when the Russians
presented their "Buran" space shuttle. NASA as a space exploration
agency doesn't operate in the national defense/security sector either,
so it's records are open too, the shuttle wasn't secret and all the
technical details of it are publically available. Despite that,
the "Buran" while bearing some physical resembalance to the NASA
shuttle was a rather different vehicle, but politicians still jabbed
at NASA for similarities despite the fact that the shuttle program
was OPEN technologically.
The FCC isn't a Pentagon agency, it can't under public law hold
any secrets, yet many think that Bash should have been shot as a
spy. Can anyone offer any solid evidence that "open" testing of
amateur applicants where the question pools are publically known
has compromised anything?

Take your word for it, Jeff. I have no idea who assigns such things or for that matter who cares about any zone but the prime one. The prime meridian was 'z' in message headers since 1935 that I know of and was known as Zebra or Zulu from the phonetic alphabets current at the time.

Ever since I discovered this forum, on it, 3.950 in general and the Liberty Net specifically have been bones of contention and now---nary a word. What happened? Did Al get married? If so, same or different sex? Did Gene go to a "fat farm?" How about Victor Miser? Is Kevin being heard in stroming audio? Or maybe the bozos realized that we loathe white supremacist talk and wised up?
Anybody have the lowdown?

Ahhh! The classic TS-440 PLL problem.
Get ready to do some serious work!
You will have to REMOVE the potting rubber they used to passify
the PLL components against vibration. IT collects water, degenerates into
and acid soulution and eats away the exposed copper.
I've replaced, caps, coils, fets, and chips so far in various TS-440s.
(And my own too!)

I think the idea of an upgrade has to be taken within reasonable limits. Although the names suggest minor enhancements to the 756, that's not fair to say is it? I have never seen inside either, but I think you are taking about Icom replacing most everything but the power cord. Regardless, if it can be done, but would cost more than buying a new rig, then you'd probably beat them up for draining your wallet.

From what people are saying about the PRO, it's not such a remarkably good rig anyhow. I'm glad I went for the 775DSP rather than waiting. I'm VERY happy with Icom as a fixed station. I'm not all that thrilled with the T81A h/t (when compared to my kenwood TH-D7A - it is rather awkward despite not having the "complicated menus" like the kenwood. I hate that 4-way rocker switch thing that is darn near impossible to push straight down!)

I think Icom does OK and it's not fair to slam them for not having an upgrade.

Right again (as usual), Radiosigs-Guy. 3950 is dead lately. Has been for months. Oh yes, The Great Liberty Net meets there every Saturday at the usual time.

Sure is different now. 2 years ago, it was wild. Chaos every Saturday night, and most weeknights too. Right tame lately by comparison, even though the occasional "jammer" shows up on some Saturday nights.

I haven't heard a Tarzan yell on the Great Liberty Net in months. And the Doofus Jammer hasn't been around in a while. I understand someone was playing "Porkbutt Song" over and over again during a recent Liberty Net. I was out of town and didn't listen that night. Word is they strongly suspect a certain individual for that one, though.

My view is that Glen Ross' comment, while theoretically correct, is way too optimistic in real world terms.
Yes, it is possible to get a bit more than 3 dB gain by stacking identical antennas at large spacing, but the effective bandwidth will be narrow. In practice, one might get about 2.7 dB net gain in stacking 2 as against 1 antenna but as one adds more antennas to the array, the stacking distance grows and becomes more critical and the system losses accumulate quite quickly, such that net gains fall towards 2 dB and lower. The comment by Leonard Davis referred to a specific case of stacking high gain systems and is probably nearer the truth (perhaps a little pessimistic). There is certainly a point of diminishing returns and for moderate length yagis that point is at about 8 or 16 antennas in the array (for long yagis, the optimum is perhaps 4 to 8).

I am thinking about buying an Alinco DR-605 dual band mobile. Does anyone
have any experience or opinions about this radio? I espically like the dual
receive and the cross band repeat features.
How is it on usability?
Is the display easy to read (both in bright light and at night)?
Any comments on the extended receive and ability to TX down to 430?
How are the VFO and memory scans? Fast or slow?
How is it with intermod (I live in an RF dense area)?

I can get it new for $320 (with PL decode), which is about what I can
afford, so it seems like a good deal.

Thanks!

>2.7dbd of extra gain. With this figure in mind the law of diminishing
>returns will not come into play.

Antenna gain G is k * D, in which k is the efficiency and D is the
directivity. The splitter losses reduce the efficiency k, so (1-k)
part of the transmitter power is converted to heat, the rest (k) is
radiated somewhere.

Directivity D is the ratio between the main lobe radiation to
isotropic radiation. For a clean single lobe pattern this is quite
simple, but usually, when stacking several antennas, there are usually
quite strong minor lobes in various directions, eating up the
radiation from the main lobe, thus the stacking gain would be less
than 3 dB, even without splitter losses.

One way to get some idea of the antenna directivity is to measure the
main lobe width (at -3 dB points) both horizontally and vertically.
However, if the antenna system has large side lobes, they take
radiation out of the main lobe and the main lobe would be narrower
than with a similar antenna with a clean pattern and it would appear
that the directivity is greater for the antenna with multiple minor
lobes.

By stacking two antennas at a larger distance than optimal will create
a pattern with a lot of "fingers" and the main lobe is quite narrow.
If you just measure the main lobe width, you might incorrectly
conclude that the stacking gain is over 3 dB :-).

Message-ID: <MPG.13b8c7209f6c4ee7989696@news.flash.net>
Source record: 108866

What do I need to look for in propagation reports to find out if conditions are good for 6 meters?

I have yet to make a 6 meter contact on my VX-5. I have a 1/4 wave mag mount antenna on my truck being fed by 5 watts FM. Maybe I am trying on the wrong frequencies, but I am getting frustrated. I never even hear anyone. At least actually listening to a QSO would give me hope. I do hear alot of static though. I love challenges and HAM is a big one.

Any help or advice on what to look for in propagation reports would be appreciated. I know that an A-index of under 10 is good and that a high solar flux count is good, but I don't know what is considered high. Do these measurements even apply to six meters?

thanks,
robert

Paul

I agree with most of the above, but must take exception to the last
sentence. If the main lobe measurement shows >3dB then you have >3dB

gain. Gain in the directional antenna sense is a
maximum_radiation_direction parameter.

5 watts to a 1/4 wave mag-mount is not gonna get you a room full of DX.
Especially in the FM mode. Find a local repeater, if you have one
there.

For serious work on 6 you need to get on SSB/CW, at least 50 watts and
a 4 element or more horizontal yagi.

50.110 is the DX call freq.
50.125 and 50.200 are the domestic call freq's.

Sparodic E propagation is erratic and difficult to predict. A good
rule of the thumb would be in the Spring and Fall of the year. About
the time the thunderstorms kick up.

With the increasind sunspots the MUF may actually reach 6 meters and
allow propagation via the F layer. (as in HF lower freqs). Watch the
SFI from WWV. The higher the number of sunspots the better the higher
freq skip will be for F layer. Anything over about 250 will generally

indicate a six meter F opening.

Keep a listen of 28.885 for up to the minute six meter info.

I gave it a shot, and being a ham is way too expensive for the amount of time I get to put into the hobby. With that said, I will be liquidating the few items that I was able to afford over the past few years.

This transceiver is practically new. I am the original owner, and have only used it in about 2 or 3 times playing with the auto patch. It has always been mounted in the trunk via the trunk mount kit (as soon as I remove it, it will be on ebay), with the display neatly mounted under the dash. The power wires has never been cut, and the antenna connector is still the original.

To check out the radio, just use the url below, or search for yaesu on ebay.

Invitation to ARRL Field Day

The Schaumburg Amateur Radio Club (SARC) invites Chicago-area hams and all others interested in amateur radio to visit SARC's 2000 Field Day operations in Schaumburg, Illinois, on Saturday and Sunday, June 24 and 25.

Field Day is the most popular amateur radio event in North America. It's purpose is to test the field preparedness and emergency communications abilities of the amateur radio community. Hams throughout the United States and Canada set up portable stations, many in remote locations, using emergency or alternate power, to demonstrate their readiness to provide public service communications under emergency or disaster conditions when public energy and communications infrastructures may be unavailable. In 1999, reports of Field Day operations were submitted by over 2,100 clubs, groups and individuals across the US and Canada, showing participation by over 31,000 individuals. The Field Day operating event is sponsored by the American Radio Relay League (ARRL). ARRL, with over 170,000 members, is the largest amateur radio service and advocacy organization in North America.

SARC will conduct its Field Day operations at the Village of Schaumburg Water Tank, Plum Grove Road north of Golf Road, in Schaumburg, Illinois. Field Day begins at 1:00 PM CDT Saturday June 24th, and concludes at 1:00 PM Sunday. Visitors are welcome, whether or not they are currently licensed amateur radio operators. Visiting a Field Day operation is a great way to learn what amateur radio is all about.

For maps to SARC's Field Day site, visit:
http://www.enteract.com/~ormos/sarc-fdmap1c.gif
http://www.enteract.com/~ormos/sarc-fdmap2c.gif

Hams seeking directions or information may contact us using the SARC repeater (145.23 MHz, -600 kHz offset, 107.2 PL). The repeater will be operating at low power during Field Day.

For information about the Schaumburg Amateur Radio Club, write to us at sarc@ancc.com, call our club information number (847 798 5248), or visit our web site:
http://members.aol.com/sarcradio

For general information about amateur radio, or more information about the American Radio Relay League, visit:

http://www.arrl.org/hamradio.html

>maximum_radiation_direction parameter.

This is going into semantics.

Directivity is usually defined as radiation angle of an isotropic
radiator (4 pi square radians) divided with the main lobe size
(expressed in square radians). Now everything is fine, as long as the
minor lobes are more than 15 dB below the main lobe. This is the
directivity over isotropic.

Now, assuming there are strong minor lobes eating up some (say 20 %)
of the isotropic power that could radiate. You can measure the main
lobe beam width and get a gain figure of > 3dB over something, but it
is definitely not over isotropic (or over single antenna in this case)
but over something that is less (- 1dB) than the original reference.
If you measure the field strength at a large distance (several
wavelengths) at the centre line, the field strength is up only by > 2
dB, since 20 % of the power was eaten up by the side lobes. As I said,
this is semantics and you have to be very careful about the reference
level.

Recently at a hamfest I asked an Icom rep about updating
the IC-756 to the IC-765 Pro. He said they weren't going to do
that.
So let's see how this works:
1) Icom comes out with a new radio, IC-756, and sells them to hams.
2) About 2 years after the above they come out with an IC-756 Pro
which is an updated IC-756.
3) Do they offer an up grade to the owners of original IC-756's? NO.
4) Do they offer a trade up coupon to owners of original IC-756's? NO.
4) Do they offer anything to owners of original IC-765's? Yes, indirectly.
They offer no chance of getting a decent value out of the lesser
capability radio when one wants to trade it or sell it.
In other words they say tough s... to all the hams that bought the
original IC-756.
Now look at the latest QST and see where Kenwood is offering
an upgrade of one of their HT's to the latest version. That is how
a responsible company operates.
You can guess which company I will NOT be looking at when I
make my next ham radio purchase.

John K3IC

news:8httt4$215$1@nnrp1.deja.com...

>Few students want
> to take optional advanced math, basic chemistry and basic physics
> courses.

That's because schools don't teach, nor provides the environment, to learn problem solving skills. IMHO problem solving skills are far more important, and useful, than a head full of useless unrelated information. In order to understand the above subjects one must know both the equations, AND what they imply about how the physical world works. It is far too easy to memorize places, and dates for a history exam then trying to explain the results of a Physic's experiment for example. It is also far less work for a teacher to teach a class, and write the associated exams, where the sole goal is to simply memorize a set of facts. The students can regurgitate the facts on demand, but don't have a clue how to use them for solving problems.

> Only those who are doing poorly in academic courses have been
> traditionally steered to vocational courses that are supposed to
> include electricity or electronics.

If the student is doing so poorly in academic courses why would anyone expect them to do better studying a subject like electronics? The joke in my college days where mechanical engineers were called electrical engineer want-a-be's. I'm not putting down mechanical engineers, but I have seen more than a few electrical engineering students who could not hack it, and switched to mechanical engineering where they did very well. It seems that electrical engineering is the more difficult out of the two. In electronics the only way you know what is going on is, either the circuit burns up in your face, or you must use various instruments to probe the circuit, AND interpret what those instruments imply about the circuit's operation. You can't normally "look at" a circuit, like you can a gear box for example, and see what is going on.

> We are far behind in education because the teachers who teach the
> teachers and most academic leaders are teching and promoting only the
> same stuff that was acceptable 50 years ago.

And it is still acceptable today too. When I signed up for the PSAT test, the prelude to the SAT test, at my high school, back in the early to mid 70's, the verbal and written section of the test was scored double that for the math and science section. When I asked my consoler about it he told me the universities don't care how much math and science you know, they just want to know if you can read and write. As far as I know that is still the

case. The very students we need in our universities, who have strong math and science skills who may have weak verbal and written skills, are at a disadvantage when taking these college entrance exams.

> Industrial leaders agree
> that it is a very slow process to change educational systems.

Industry can't complain about this. They got EXACTLY the kind of employees they wanted, and some industries worked hard for years to set up a system with the educational sector to get them. For the manufacturing environment we had in the past all industry needed was somebody who could read and follow instructions on how to stuff parts in to a machine on an assembly line. Now that we are seeing a shift away from simple a minded manufacturing industry we have industry pointing fingers at the educational area as the source of the problem. The manufacturing sector quickly forgot their contribution to the problem, and now expects the government, meaning us the tax payer, to pick up the major cost of overhauling the system.

> Conventional educational systems change very slowly while the needs of
> industry can change very rapidly.

Which is no excuse for the manufacturing sector to ignore their responsibility. Instead we get the HB-1 visa bill in congress, which is supported by industry. Now Industry can import high tech workers, who will be competing will college graduates, for jobs which holds down wages for everyone. I just find it funny that my school, Lawrence Tech. Univ. known for it's engineering and other science programs, had Spencer Abraham as the guest speaker at our graduation exercise this past May. As some of you may know Spencer Abraham is the one who started the HB-1 visa bill. Mr. Abraham spoke for some time, about the need for more US high-tech workers, but never once mentioned the fact he is the one responsible for a bill which will import foreign workers who will be competing for the same jobs as the graduates he was addressing.

As if anyone would buy that old radio for $400! If you saved the packing boxes and materials from your other purchases you would not have to charge someone almost $9.00 for packing supplies! Just my 2 cents but I just shipped a FT-8000R that I sold on eBay for $335 for only $8 including insurance! Good luck with your auction.

Thanks for reading this message. I have a Icom ic-2at that after 20 years of service is broke. I will not transmit. The RED LED light comes on briefly and goes back off. Will not work with the PTT or External TNC connected! Any help would be appreciated.
I guess is the electronic TR switch? A print would help. Will pay for a reprint.

Thanks
Dennis, w8nw

1158. FS: CUSTOM FIT SMA-TO-BNC ADAPTERS

Newsgroup: rec.radio.amateur.misc

Do you have a need for an sma-to-bnc antenna adapter that is custom
made to fit and protect your H.T. or scanner radio?

Previewed in the May 2000 Issue of CQ Magazine.

Adapter allows you to:
Quickly change your antennas to base,mobile or different style use.
Use the more popular and wider selection available of bnc antennas.
Prevent chassis connector wear or from coming loose due to always
having to change antennas.

Adapter features:
Gold contacts for best connection.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The rubber base also provides an excellent support for all applications.
No need to remove once installed to make any antenna changes.

$11.95 + $1.50 S+H(Sizes to fit most radios)
For complete information and to view a photo of the adapter go to:
WWW.QRZ.COM(SWAP)(ENTER KEYWORD SMA TO SEARCH CLASSIFIEDS)
0R EMAIL: gulyas@netzero.net

I welcome any questions or comments at my email.
Thanks for looking at my posting.

50 Feet above sea level :-) I have 146.52 programmed into a scanner I leave on pretty much all the time. I've heard an actual QSO maybe twice in the last couple of years.

> Let's suppose you can hear everything within a radius of 25 miles of
> your QTH; how many hams live within that radius? Would simplex be
> more of a benefit to them than operating through a rptr?

In CA, with a repeater with a 100+ mile range on every hilltop, maybe 10,000 or more hams within range of each repeater, 146.52 isn't as necessary. And 144.2 is active too - you can raise someone on SSB almost all the time, even from 50' MSL.

There's no point in making separate rules for different parts of the country based on frequency usage patterns. Based on the respondents from the E Coast, looks like there's a lot more activity there, so that's justification for the rule.

Well, Travis, I have just 2 points: (1) no one suggested operating outside of lawful FCC rules. My complaint was about yielding to unlawful and unreasonable pressure from a politicized FCC used as a tool of the enemy.
(2) You're not hearing much of ANYTHING on 3950 these days, are you???

Any one know a website or publication where ALL
known southern California field day sites are
posted ? Perhaps even on a map?
This is something that is way over due in a public relations sense.
Example: if I were new to Ham radio and wanted to visit a site , it would be
to easy for me to punch-up a website and see which one is closest to me.
If this is not been done, S. Cal clubs council take note!

Just a quick report to say that Hilly and Rick Lazio are neck and neck in the N.Y.Senatorial race according to the Zogby poll which is accurate. Lazio was on WABC this afternoon on the Shawn or Sean Hannity Program and the guy makes sense. Hilly is beginning to rub a lot of people the wrong way because of one main thing:
SHE WILL NOT TALK ISSUES!
She does a lot of smiling and waving but can't get that dumb Arkansas grin off her puss and it's ticking me off too. In fact I've done a flip flop and I'm a Lazio man but that's subject to change although I doubt it.
Let's face it-what does that broad know about New York except that it's shaped like a lion and N.Y.City is one of the paws? Don't believe me? Look at a map.
Furthermore that house up here in Chappequa fools no one. It's an escape from Bill and she's gonna dump him right after the election. In the meantime word has it that Bill is looking for a home in England to probabaly get away from bill collectors. And with Chelsea in Stanford they've become the worldwide Clintons.

The 80 Foot Tower

An ARRL member was in an accident so he filled out an insurance claim. The insurance company contacted him and asked for more information. This was his response:

I am writing in response to your request for additional information for block number 3 of the accident reporting form. I put 'poor planning' as the cause of my accident. You said in your letter that I should explain more fully and I trust the following detail will be sufficient. I am an amateur radio operator and on the day of the accident, I was working alone on the top section of my new 80 foot tower. When I had completed my work, I discovered that I had, over the course of several trips up the tower, brought up about 300 pounds of tools and spare hardware. Rather than carry the now un-needed tools and material down by hand, I decided to lower the items down in a small barrel by using a pulley, which was fortunately attached to the gin pole at the top of the tower. Securing the rope at ground level, I went to the top of the tower and loaded the tools and material into the barrel. Then I went back to the ground and untied the rope, holding it tightly to ensure a slow descent of the 300 pounds of tools. You will note in block number 11 of the accident reporting form that I weigh only 155 pounds. Due to my surprise of being jerked off the ground so suddenly, I lost my presence of mind and forgot to let go of the rope. Needless to say, I proceeded at a rather rapid rate of speed up the side of the tower. In the vicinity of the 40 foot level, I met the barrel coming down. This explains my fractured skull and broken collarbone. Slowed only slightly, I continued my rapid ascent, not stopping until the fingers of my right hand were two knuckles deep into the pulley.

Fortunately, by this time, I had regained my presence of mind and was able to hold onto the rope in spite of my pain. At approximately the same time, however, the barrel of tools hit the ground and the

bottom fell out of the barrel. Devoid of the weight of the tools, the barrel now weighed approximately 20 pounds. I refer you again to my weight in block number 11. As you might imagine, I began a rapid descent down the side of the tower. In the vicinity of the 40 foot level, I met the barrel coming up. This accounts for the two fractured ankles, and the lacerations of my legs and lower body. The encounter with the barrel slowed me enough to lessen my injuries when I fell onto the pile of tools and, fortunately, only three vertebrae were cracked. I am sorry to report, however, that as I lay there on the tools, in pain, unable to stand and watching the empty barrel 80 feet above me, I again lost my presence of mind. I let go of the rope . . .

Does anybody have the alignment proceedure for the
forward and reverse power meters for the Dentron
MT3000A? The operating manual that I got when
I purchase the unit doesn't have any thing of the sort.
I fixed the problem with the board in back (very simple
fix - don't know why the guy who I bought it from didn't
figure it out...) but the meters are wacky..

I've tried adjusting some the two caps on the SWR board
and the pots for sensitivity, but the reflected still acts funny.

Email any help!!!
Thanks and 73!!

1182. Re: Register Liberals, not guns. (SUMMARY)

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-21 00:00:00 UTC
From: Gman <gman_in_dc@my-deja.com>
Message-ID: <8ipf7udhg1@nnrp1.deja.com>
Source record: 108803
Cross-posted to: alt.society.liberalism,alt.discrimination,rec.radio.amateur.misc,alt.politics.conservative.townhall

So let's have a summary -

We have the far right, supplied by knowledge fresh off the airwaves courtesy of Rush Limbaugh, squaring off against those of the far left, who tend to be illogical and emotional.

(Yes, you're right - I'm a moderate. We're few and far in between.) Here's my stance on the following issues.

1. Registering liberals, not guns - well, the person who began this thread is just an idiot. There's no better word. Are you familar with registering to vote? I'm a registered Democrat.

2. Gun control - aside from the already in place assault weapons (i.e. weapons designed originally for military use) and background checks, there is not a lot we can do. Gun licensing, as I've seen (I was pro-gun licensing for a little office bet) accomplishes little - thanks to the folks on alt.law enforcment for supplying that handy information.

3. Death penalty - Works when it's carried out correctly. However, sad truth is that it's carried out incorrectly all too often. If we could develop a relatively standard process for sentencing people to death (perhaps a higher standard of evidence than beyond a reasonable doubt, though I'm not sure what to call that) then we'd have no problem, but because the death penalty was applied so poorly in the '70s, when I was still in college. The reason we are seeing a rash of people being set free is because those sentenced to death are coming around for execution and are appealing.

4. My personal thoughts - those of you who continually insult liberals are nothing more than bigots, no matter how hard you insist that you're open to new ideas, it's quite obvious from the hostility floating around here that you're afraid that someone might prove you wrong. Perhaps if you kept in mind what we're all here to accomplish - a better government - you'd keep the partisan bickering and mudslinging to a minimum. Despite the fact I'd like to comfortably assume all Republicans are redneck morons, I know that's not the case, and I'm giving you due credit for supporting your belief.

Please return the favor. I'd write a more thorough reply to those of you who brought up valid points, and continue to point out how ignorant those who did nothing but flame, but I do have an actual job to do, and right now I have a pressing case.

For those of you who think that government corruption is rampant, I can personally say you're dead wrong. It's my job to investigate violations

of law by Department of Justice officials. I've worked here for nearly 25 years, and even arrested my own supervisor. I have seen with my own eyes, evidence of corruption. But the malfeasence is extremely rare. Most of the complaints we investigate are unfounded.

Deal with it.

Good question. About all I ever hear on 3950 anymore is that freakin lunatic WA9KJI. And all he ever talks about is the Liberty Net!

I remember how it was not too long ago.
K5BLB, WA9KJI, W9ART and a shitload of unidentifieds would be in there jamming the hell out of 3950 every night. I can't believe that those 3 still have a ham license. I also don't believe for a second that the FCC never heard them jamming. Hell, they raised such a ruckus that Marconi could hear them in his grave!

Now all that's left are unidentified jammers, which for some strange reason the FCC's multi-million dollar DF equipment can't seem to locate. Oh, that's right ... the FCC actually has to WANT to find those who jam the Liberty Net, and they actually have to WANT to turn their DF equipment on. Silly me!

True, there's a number of "jammers" still at large. But a lot have dropped out of sight. Doofus Jammer hasn't been around in weeks. The Tarzan jammer hasn't been around in months. Then there was the guy who had the really ragged CW signal with an echo who used to send "NAZI" over and over again. Nothing out of him for over a year.

There are several other unidentified "jammers" who are not around any more. And don't sell the FCC enforcers short. Even though they don't announce what they are doing or when they will do it, occasionally someone gets that dreaded "certified letter", and he is memorialized on the Rain Report.

So far everyone has been partly correct. The issue was the Libnet moving in and thinking they owned 3950. That has ceased and so has most of the animosity that came with it. Granted there are other issues surrounding some in that group, but regardless, they have a right to their opinions. I can see it's driving some people crazy trying to stir up shit in the NG without 3950 to bitch about. LOL

I don't know about that - netfirms.com appears to be a favorite site
for domain hijackers. This was also the site involved in the arrl.org
hijacking (and I note that the bogus entries for www.arrl.org are
still set up on the netfirms DNS servers). At this point, I'm still
not sure if Netfirms has been cracked and are "0wned" by some group of
crackers who enjoy domain hijacking, or if they're just an incredibly
ineptly managed web hosting site where domain hijackers know they can
easily put up a free site for a hijacked domain. Or both.

Bingo, Timmy. The Radiosigs-Guy couldn't have said it better. I guess everyone misses "the good old days". Now it's down to one or two "jammers" a week instead of the usual dozen or so.

Even if all enforcement ceased and total chaos returned, it wouldn't be the same any more, as some voices from both sides have gone to the great ham shack in the sky. What's a good jamming without

You're child molesters
You're baby killers
You don't have a job
You live with your mama
You're going to jail
In Arkin-Saw.

Ahhh yesss ... those were the days. May the departed "netters" and "jammers" rest in peace.

1191. WVARA Meeting Wednesday 6/20

Newsgroup: rec.radio.amateur.misc

The next meeting of the West Valley Amateur Radio Association will be on Wednesday, June 21 at 7:30 PM at the Campbell Community Center, at Winchester Blvd and Campbell Ave in Campbell, California. We will be meeting in the "Mary Campbell Room," or Room Q-84, which is the meeting room closest to the former-tennis-courts-turned-skateboard-park.

Visitors are always welcome. We hope visitors will consider joining after meeting some of the group.

There will be two topics covered at this meeting. First will be a presentation on technical aspects of High Definition Television (HDTV).

Then we'll talk about this weekend's Amateur Radio Field Day, a nationwide event in which WVARA will participate. Field Day is a combination of emergency drill, operating contest, educational event and really big social. WVARA's Field Day site, located at the ridgetop residence of Charlie Norman AB6VS at the 3000 foot elevation near the peak of Loma Prieta, will have more than thirteen radio stations set up from scratch running mostly in tents (or a few RVs) from generator power. Last year WVARA's site was one of the top ten largest Field Day sites in North America. We anticipate similar placement this year. WVARA's Field Day info can be found at http://www.wvara.org/fd/

The West Valley Amateur Radio Association is a general-interest Amateur Radio club serving the San Jose/Silicon Valley area. The association meets on the 3rd Wednesdays of each month, except in December when a holiday party is held instead of a meeting. Licensed Amateur Radio operators may also participate in the WVARA's weekly nets (meeting on the air) Tuesdays at 8:30PM on the W6PIY repeaters. (147.39+ PL151.4, 223.96- PL156.7, 441.35+ PL88.5, 1286.2- PL100) All four repeaters are linked during the nets. Visitors and guests are welcome at any WVARA meeting or net. See the WVARA Home Page at http://www.wvara.org/ for more information.

Strewth

I thought most of the guys on this reflector were lucky to tye up their shoe laces, finally we get some serious aswers to a query

trent vk4ti

Ps What is relevant is the desired result: that being what are you trying to acheive from stacking, if the optimum you are after is 15 degrees radiation then 3/8 stacking distance is probably fine. Refer to the articles in the most recent ARRL antenna handbok or subscribe to TOWERTALK reflector and get some real answers o your real world question..

Treasury Department to recall 25 million coins.

Washington D.C. Tue. June 20, 2000

The U.S. Treasury Department has announced today that it will re-call all 25 million commemorative quarters honoring the admission of Massachusetts into the union.

Over a ten year period all quarters coined will have on the reverse side a symbol honoring a state's admission to the union. Five were minted in 1999 honoring the first five States. This year the first state to be honored is Massachusetts.

The recall of the Massachusetts quarters is prompted by the outcry from many groups over the depiction of a man with a gun. The depiction represents the minutemen who fired the first shots of the revolutionary war and has been used by the State of Massachusetts as a state symbol. President Clinton has signed an executive order forcing the treasury department to recall these quarters and issue ones more appropriate to the history of Massachusetts.

A committee of Massachusetts's legislators and U. S. Treasury officials approved the design. President Clinton through his spokesman Joe Lockhart stated that he was not properly informed by this committee and is outraged that the coin was released without his approval. Sarah Brady, the outgoing president of Handgun Control, Inc., said today, "This administration has committed an act of insensitivity unprecedented in recent history. How can the President at one time name the White House press briefing room in honor of my husband Jim Brady, who was horribly wounded by a gun, and then allow a coin to be issued containing the picture of a gun."

Donna Dees-Thomases, organizer of the Million Mothers March against guns said, "This coin sends the wrong message to our children. It says to the children that guns are not always dangerous, evil objects that should only be possessed by the government. Also, I noticed that the rifle on the quarter does not have a trigger lock."

Wayne LaPierre, spokesman for the Gun Lobby said," This is the type of hysterical over-reaction we have come to expect from these ninnies."

We have also learned that Sen. Charles Schumer (D. N.Y.) suffered personal humiliation and was injured as a result of the release of the Massachusetts commemorative quarter. Sen. Schumer was recently elevated to the Senate from the House of Representatives chiefly because of his unyielding stance for reasonable gun control legislation. Sen. Schumer was drinking in an upscale Georgetown watering hole with Sen. Ted Kennedy (D. Mass.). According to police reports, Senator Kennedy was idly flipping a quarter, which just happened to be the newest release. The quarter landed unnoticed in Senator Schumer's glass. As Sen. Schumer lifted the glass to take a sip, he spied there in the bottom an image of a man with a gun. The Senator was so frightened by this he dropped the glass and dove under the table. Sen. Kennedy seeing this, and believing Sen. Schumer had a waitress down there, dove on top of him causing minor injuries.

I agree with this last statement...furthermore, in "real world"
practice,
the gain from a large vertical stack is not very useful on HF because
it's
concentrated in a very narrow low-angle lobe which is generally not too
useful. I have a stack of three 6 element monobanders on 10 meters and
find that all 3 is seldom the best choice. Usually either the bottom 2
or top 2 will beat all 3 together. If you have access to N6BV's Terrain
Analysis software in ARRL's Antenna Book (18th edition), it is very easy
to see this as he shows antenna takeoff angles plotted against signal
arrival angles to different areas of the world. Of course if you had a
case
of measuring the antennas on a test range, the largest stack would
always
win...it just happens to be at a takeoff angle that is not very useful
in
the real world.

As another poster has confirmed, it is possible to obtain more than 3dbd by stacking two identical aerials. Another point to bear in mind in my original post was that I made reference to a "rule of thumb" for calculating gain. As can be shown, this is not an accurate figure in most cases but, in any aerial system that the average amateur is likely to erect, it will give a close approximation to the true figure. There are not that many people around who can install 16 times 11 ele yagis on 50Mhz <GG>

Whatsamatter, Docky Baby? Lonely because you ran out of someone to
beat up on, you radio bully?

OK, you wanna know what's with 3950. I'll tell ya what, step by step:

1. The Liberty Net, for over 20 years (thanks to the stalwart
fortitude of W1WCR), has been a laissez-faire forum where anyone could
express any opinion on any subject, no matter how outrageous.
2. This characteristic naturally attracted multitudes of liberty-
minded people to the Net on 3950 on Saturday nights (also Mondays and
Wednesdays until the mid-'80s).
3. These good people then began to gather also on 3950 on other nights
when there was no net.
4. A tiny coterie of mean-spirited anti-freedom people ("That's rat,
Daive, we've gotta stop these Nazis and saive the world!") began to
take advantage of the Net's liberty by checking into the Net and
filibustering to prevent others from expressing their opinions. Some
of the same people began to hold nightly filibuster sessions, language
classes, etc. to keep Net supporters from using the freq during the
week.
5. It then became imperative that these anti-liberty people be
excluded from the Net and other QSOs to control their destructive
intent.
6. Frustrated in their filibuster tactics, the miscreants then began
to vent their spleen on the Liberty supporters by jamming the Net and
other communications, even recruiting other miscreants up and down the
ham bands to aid them. They managed to assemble an incredible array of
kooks, jerks, and idiots to pour forth the most unbelievable load of RF
sewage night after night.

7. Liberty supporters tried in vain to get the FCC and the ARRL to do something about the radio criminals. FCC inaction led to a campaign to put pressure on the Commission, by every legitimate means, to do their enforcement job.
8. FCC excuse-making led certain Net supporters to begin a campaign of "purifying" their "group" so it would be "Mr Clean" and above any FCC quibbling reproaches. Legitimate at first, this eventually led to the formation of a tiny clique who began to use "FCC enforcement requirements" to exclude legitimate participants whom they personally disliked, as well as to restrict discussion of certain topics which they labeled "not appropriate for the Net." The clique flexed its muscles and took over the Sunday-thru-Friday QSOs of Net supporters in a most distasteful way.
9. The above created disappointment and disgust among the true champions of Liberty who had been formerly attracted to the freq by its now-defunct laissez-faire characteristics. This led to the permanent departure of some of the most interesting, entertaining, and amiable players who now hold forth on another frequency night by night, have attracted many new participants, and are enjoying themselves, while the 3950 clique vent their spleen and resentment by creating defamatory websites because 3950 is no longer a factor between Saturdays.

(Footnote: the departure of stalwart stations in Wayne, NJ and Queens, NYC, the concentration of W9OAG on his publishing activities, and the sad demise of W8MPB and KE2LO were also factors.),

Sorry this is so long but it's the only way to tell the WHOLE story.

Dear YLs and OM,

DTC's regular Morse exercises transmitted every Monday at 19:00 h
local time in DL on 3575 +/- 3 kHz are available on the Internet as
well, being in downloadable MIDI-file format.

Currently three speeds are offered for download:

Speed "90" (= 18 wpm): http://www.muenster.de/~dtc/nr28_90.mid

Speed "60" (= 12 wpm): http://www.muenster.de/~dtc/nr28_60.mid

Speed "45" (= 9 wpm): http://www.muenster.de/~dtc/nr28_45.mid

Speed "25" (= 5 wpm): http://www.muenster.de/~dtc/nr28_25.mid

Hoping you'll have some fun decoding either on the air or from the
Internet, you may check out your capabilities in decoding Morse. For
ease of reference the content of the Morse code transmission / file
may be accessed at DTC's web site using

http://www.muenster.org/dtc/cwtext.html

Your opinion and suggestions are welcome: dtc@muenster.org

David,

Box, peanuts and bubble wrap from Parcel Plus 8.92 (have receipt)

Shipping and Ins ($400.00 return receipt, 4 lbs to wa) $12.45 as per
their rate calculator on the web

Or a total of $21.37.

As posted on ebay, the shipping will cover shipping to any of the lower
48 states. So if you live closer to me, I will earn a buck or 2 on the
shipping. If I mail the unit to my neighbor the cost would be 17.52.

Al Wong
KF4GDD

PS: If you buy it, I'll be sure to spray the inside of the box gold, but
would have to add $4.00 for a can of paint.

SNIP - CUT - Bend - Fold - spindle - mutlitate - etc.....

SORRY pal!

This is yet another "Suburban Legend" which first
saw the light of day on "The Intellegence Report"
(BAAAAA HA HA HA!! What an appropriate name!!)
radio program on WGTG Shortwave Domestic Radio.

The mis-Intellegence Report Program is run by
Mike Koernkie of the Michigan Militia fame.

Ole Markie-Mark is
still very much a Seditionist who reguaraly
uses his radio program to broadcast the most far out
and screwball paranoid right-wing high octane bullshit
that his listeners seem to eat up faster than horseflies
would eat up a freshly laid cowflop.

Make no mistake, you could call into "The Intellegence
Report" call-in line and say that Hillary just gave
birth to kittens and Bill is in the Oval Office smoking
a doobie on TV, and these jarheads he has as listeners
will believe it without any confirmation whatsoever.

This "Mass Coin Recall" is just such a story - first
stated about 3 months ago on his "show" then re-broadcast
on Alex Jones "Infowars" show - which is another
hotbead of paranoia an pablum, which also happens to
follow Mark's program on WGTG at 9:00 Central.

Typical. If you want to have some fun, just call into
either one of these shows and watch their heads spin.
Just make up something like the Queen of England is
a UFO Ailen who want's to take away your guns or something
and it will be eaten up faster than shit-thru-a-goose.

BAAAAAAA HA HA HA!!!! Quarter-recall...
What a bunch of purebred Arse-Holes!!!
ROTFLMAO

Hello-

I will be starting a car trip from Champaign, IL to NY. Just finished the install of a 2m mobile rig in my car, and I would like to hit some repeaters on the trip. Unfortunately, I don't have a repeater guide with me here, so I am looking for help here. Basically, I am looking for 2m repeaters in the:

-Indianapolis area
-Dayton, Columbus Ohio Areas
-Pittsburgh, Harrisburg, Philadelphia PA areas
-New York City/NJ areas

Also, is there much 2m simplex activity these days (i.e. 145.05)? I've been out of the hobby for a few year.

Any help is appreciated.

> when there was no net.

Not only are there liberty-minded people there, but some of the most
interesting thinkers and speakers I've ever encountered in my life.
It was (and is, when the moronic "friendlies" jammer group is
absent) one of the most interesting, compelling, and eloquent groups
I've ever experienced on amateur radio.

> 4. A tiny coterie of mean-spirited anti-freedom people ("That's rat,

Well and succinctly put.

> 8. FCC excuse-making led certain Net supporters to begin a campaign
> of "purifying" their "group" so it would be "Mr Clean" and above any

> a most distasteful way.

I've not always agreed with the policies of whoever had the
frequency on 3950, and sometimes it seemed a bit restrictive, but in
general I think what Al and Vic have done has been right and good.
Whatever errors they've made have been little ones, easily
forgivable.

If the issue is WB2CLN, he has alienated many people including
myself by his lies, false accusations, and dishonorable behavior. I
was delighted when KE2LO and others started a policy of excluding
him from their QSOs or signing out if the "man with the baton" let
him in.

> 9. The above created disappointment and disgust among the true

>
> Sorry this is so long but it's the only way to tell the WHOLE story.
[...]

I've been busy -- getting married and settling into a new life, and setting up a computer network, among other things -- so getting my station back on the air has not been a major priority. But when I get on, I suspect that the presence of WB2CLN on the new discussion frequency will make me reluctant to join in there. The anti-N2SAG crusade troubles me too. Which is too bad, because the other participants there include those whose intelligence and insights have been very valuable to me in the past.

With my best wishes,

Kevin, WB4AIO.

Also note that 144.90-145.10 may be "simplex" in most areas, but that it is
DIGITAL simplex, not voice, in many areas.

1221. Good emergency power supply

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-22 00:00:00 UTC
From: Robert Joshua Chen <rjchen@Stanford.EDU>
Message-ID: <8itqiresr1@nntp.Stanford.EDU>
Source record: 108692

I'm in the process of setting up a low-key emergency power supply (low-key, as in non-kw generators, due to limited space). I have an IC-706MKIIG I'd like to be able to power in an emergency situation for at least half an hour. My usage on 2m would probably be 4-10 watts with a TX draw of about 5-10 amps (7 average). I'm currently considering Pryme's portable power station (12 volt, 7 amp hour sealed lead acid gel cell battery). I would keep this trickle-charging off the AC outlet until I need it. Also, I'm thinking about getting some solar panels to charge it during a power outage. Any thoughts about this setup would be welcome including alternative suggestions--keeping in mind I have space limitations and don't need high power (<20watts, FM).

Thanks,
-Robert

I don't know the percentage. I think the number of members is well over three million. So when you consider that 80% or more of Americans own guns, then the percentage of Americans that own guns that are members of the NRA is small. But, the NRA is one of the largest organizations in the US.

If you want more intelligent persons to speak with on HF, get rid of the CW exam and replace it with a Rubik's cube to "unscramble".

By choosing CW rather than mathematics, governments had choosen to limit HF hams to "robots" unable to think ! it's a choice ... accept the result ! :-)

The main problem for these "robots" is to think that thousands of PhD all around the world are going to access to HF bands without CW soon.

Clever people on HF : a new era for ham-radio !

From what I remember of my Dad's 901, I think there is a low level output that would be useful for driving a traansverter. However, unless you have the external VFO using it for 2M repeaters would be awkward (unless you stay on one all the time). The problem is that the 901 does not have the dual VFOs of later rigs that made it easy to work split. You basically have one memory that you can set and use for transmit while receiving on the VFO (or vice versa).

Al - don't be put off by these policemen (we have to put up with them in the DX pileups, too!) Just today I shipped off a linear amplifier (minus the transformer) from Oregon to Colorado (about a thousand miles). Shipping with special packing and insurance alone was $122.85 !!!!!

Some people just don't ship much stuff, I guess, to have a clue what it costs nowadays. Good luck on your sale!

Larry

Hey Gertie, it's my right to comment on your Senatorial race since I pump
quite a bit of dough into your economy by way of show going et cetera and
yes, I live in Northern New Jersey which is known for its intellect
regarding politics. In fact I'm a political genius.

I don't know if you are aware, but TAPR is pretty much dead. The new site is www.dandin.com as Dewayne found them all a job. It looks like they specialize in getting Government grants as an 8-A company.

You can tell how much Greg was behind all the Web site, because since his resignation it has become a purely static shrine. Nothing gets updated anymore.

You could probably win both BoD membership and the Presidency if you were to run, as the other members are mostly silent and show up for any voting requirements, but that's about it. To look at the Web site, none of the other members do anything useful if that is the evidence.

<horseshoestew@my-deja.com> wrote

I've tried that, and it doesn't work the way a standard SWR
bridge would work (at least in my expectations).
Do you own one of these units? Can you look at the
adjustable caps on the SWR board and see if the wire
connecting them is soldered to the input wire from the transmitter?

The *reason* suicide-by-gun is "lumped" in with homicide and accident is that guns are being considered as 'disease vectors,' like the salmonella bacillus or a high-cholesterol diet. One of the primary missions of the CDC is to track and tabulate what causes deaths. Someone else may take the data and attempt to make an argument for or against gun control using it, for example, but the CDC is doing its job in simply *reporting* deaths and their proximate causes. If someone kills themself with a gun, they are every bit as dead as someone else who has that service performed by another.

That sounds real good. Taking proper care of Hillary. I hope she gets a bigger wax job than Reagan gave Carter in '80. Hopefully she'll see the light and realize nobody likes her.

Maybe after this election, She and the Commander in Cheat and General Reno will manage to join Gov. Edwards of Louisiana for a few years. It would be nice to see Klayman keep the heat turned up till that happens. Latest developments at: http://www.judicialwatch.org

The generalizations that both Leland and I have made are applicable to Amateur Radio and the importance of seeing Amateur Radio as a TECHNICAL EDUCATIONAL hobby that must be updated to retain its original basis and purpose.
The educational systems of our nation are sick and many people see many ills that come with the territory...Some are off topic here...but they include a basic problem which attacks all those who care to improve the education for elementry and high school students. The problem exists

IMHO in both our public and private schools all across our nation...Although it is seen as more prevelrnt in middle class and poor districts. There is a heated debate among educators as to whether to separate gifted and learning impared children from average children. IMHO any opinion made in either direction provokes debate. For example those who believe that highly intelligent children should be given the opportunity of having teachers who are qualified to go far beyond the normal curriculum and help kids who are competent in the basics have more flexibility and have support in working on advanced projects which they are permitted (with some limitations) to select for themselves.. (which could include Ham Radio)....BUT the opponents say that it is not democratic to separate the more astute children from the average and the slow children. What qualifications should the teachers of the gifted have? What kind of special projects can gifted students be enocouraged to pursue? Should the school districts pay more for schools, teachers and equipment that are needed to challenge the capabilities of the gifted/talented?? Is the testing to determine who is gifted/talented fair? Does it unfairly eliminate too many minority students? Can it offer equal opportunities for all? Should it?
IMHO there are a certain percentage of people who are capable of learning almost anything at a faster pace than most others...and there are a certain percentage of people who are not capable of even learning to read at a level needed for true comprehension and self-study.
IMHO most of the educational problem exists because many Americans refuse to recognize the fact that there are people with different abilities of all ages ...although they can easily recognize the final adult result of the differing abilities of all adult working professionals.
IMHO the U.S. has been suffering, not because there are not enough gifted kids in the U.S. and not even because there are too many idiots. We are suffering because the educational systems are not doing the job of providing the special educational challenges to the gifted and the special remedial help to the slow children. This is expensive and when money is thrown at the educational systems to improve them it is usually not thrown in the right direction. Thus IMHO we can generally say that we are doing little to develop the skills and talents of many Americans who do have the potential to become skilled technicians and engineers or becoming any type of professional whose job calls for innovative thinking. You can not do so, even on the early formative levels, because most of the teachers are not taught enough or are even capable of promoting any education beyond their mundane generic lesson plans. Mixed ability classes take up the teacher's time; trying to help the slowest students. In many cases both the slow and the talented can cause disruption because they realize that they are not able to get anything out of their school work.
Both the gifted and the educationally challenged lose respect for their teachers and there fellow school mates and we read only of the worst cases where the kids become so full of hate that they bring guns to school...We don't hear about the bad attitudes that prevent teaching and learning at the levels that are required for college entry....for

getting kids prepared to tackle the modern technologies that, I must admit, are now more complex than they were when I was a kid.
Enuf said. There are lots of books on the subject of how to educate and lots of theories...most of which don't always work in most locations and most of which are all but impossible to implement fairly...without some folks yelling that they are elitist ideals, will kill the self esteem of some kids, are bigoted against some minorities or even are unfair to kids because they expect them to work too hard. How can we expect anyone but a self taught genius to become an engineer under these conditions? Can Ham Radio help? I think it can.

Please keep thinking,
Kids more special classes AND
Hams need more license classes,

That is a very interesting "story". I first read about it in an issue of the National Lampoon in I think 1969 or so. It was supposed to be about a guy doing some remodeling on a 2 story building and if I remember correctly happened in Canada. I certainly hope it was just an urban legend. God Bless 73 Tom Popovic KI3R Port Vue Pa.

KK7HO thinks:
>Thanks to Riley and the FCC.

No no no, Timmy. Thanks IN PART to Riley and the FCC. You left out the "IN PART" part. Some of the credit goes to the fact that some of the more vocal visitors to 3950 have passed away in the last year or 2. Still others who frequented the frequency have simply dropped out of sight.

Now, past that, the credit goes to Mr. Hollingsworth. He's been pretty effective, and that can't be denied.

"Politicized FCC used as a tool of the enemy" ? Hmmm .. maybe the late Arky Bob was right. Maybe Bill Clinton DOES listen to 3950. I can see it now. Komrade Klinton and Chairman Kennard and MadWoman NotBright huddled around a shortwave receiver every Saturday night .. with Queen Hillary serving them milk and cookies. Bwahahahahahahahaha.

Timmy does it again:
>Hmmm - I wonder if the jammers are in DC
>

This could be THE connection, Timmy. Maybe the jammer is none other than Komrade Klinton himself. Maybe he does more than listen. And we all know that Queen Hillary is a doofus, but could it be that she was .. Doofus Jammer? The voice was about right, come to think of it.

If this is all true, maybe it was The Amazing AlGore doing the Tarzan Yell months ago. I hope he has a lot more to yell about as the fund-raising investigation continues.

The Radiosigs-Guy can use this information to stir up even more votes for Governor Bush. Wait and see. Hit it, Radiosigs-Guy ! ! ! In the key or "R", for "Rrrrepublican Rrrrout".

1248. Re: Hillary haters!

Newsgroup: rec.radio.amateur.misc

Source record: 108770

I am reminded by an old adage that goes, "Its better to keep quiet and be thought a fool, than to open your mouth and remove all doubt."

With Hillary, it's a foregone conclusion that her party already knows what she stands for and therefore stating and rehashing the issues are unneccesary. As for the rest of the electorate, or undecided, she is better off by keeping her mouth shut and allowing the abundant imaginations of the polity to convince themselves of what they want to be convinced of (thank you mass media). And in so doing, perhaps the law of averages (dummies) will favor her.

To sort of paraphrase H L Mencken who said "No one ever went broke underestimating the taste of the American People," I think the above would apply.

de Billy

1249. Re: What's with 3.950?

Message-ID: <20000622002716.04000.00002470@ng-ca1.aol.com>
Source record: 108771

KK7HO finally makes the connection:
>Hmmm - I wonder if the jammers are in DC
>
BINGO, Timmy ! ! ! Now we have it cornered. Not only does Komrade Klinton listen to 3950, maybe he's the jammer these days. And maybe Queen Hillary is Doofus Jammer. She's a doofus, and the voice is about right, so this has real possibilities.

If this is all true, maybe it was The Amazing AlGore doing the Tarzan Yell months ago. I hope the fund-raising investigation gives him a lot more to yell about. The Amazing AlGore invented ham radio, you know. Yep, right after he invented the internet.

Now it all clicks. Any day now, the Commander in Cheat will be mentioned on the Rain Report for jamming 3950. He and Queen Hillary and The Amazing AlGore will get certified letters from the FCC. This will be fun to watch. Somebody alert the Drudge Report. This is gonna be big.

Radiosigs-Guy ... where you at? I want you on this story like a blood-hound on the trail of an escaped convict. Don't let up till it's nailed shut and we know the TRUTH ! ! !

22.06.00

Press Release

A new Internet resource for Radio Amateurs and Short Wave
Listeners has just been launched.

Ham Radio UK offers:

*Free e-mail account yourname@ham-radio.co.uk with notification
sent to your main e-mail address when you have new mail waiting.
*Unlimited free web space to build your own web site, plus a
free subdomain (yourname.myqth.com).
*Bulletin boards and chatrooms on all your favourite amateur
radio subjects.
*Free classified ads. Advertise your for sale or wanted items
free of charge.
*E-mail mailing lists on subjects related to amateur radio.

The site has been developed on a voluntary, non-profit making
basis by Gordon Hudson GM4SVM, as a logical development of his
commercial web marketing work.

Visit the web site at http://www.ham-radio.co.uk/

I am not familiar with that unit, but the caps may work similar to other swr bridges and are to adjusted while connected to a good dummy load for zero or minimum reflected power. Then the resistors are adjusted for the correct power. You may need to reverse the antenna and load coax (feed power in backwards from normal) to adjust the power range of the reverse (reflected) power.

Allen Underdown wrote:

1267. Roger posts a phone number ...

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-23 00:00:00 UTC
From: "David J. Windisch" <davidw@copper.net>
Message-ID: <EqS45.162$E82.673@newsfeed.slurp.net>
Source record: 108589

Hi, Roger:

I called the number for me that you posted earlier today. Much to my surprise, I didn't answer the phone. Explained to the folks on the other end what you had done, in detail, and gave them your FCC info. Asked them to call me if anything untoward happened. I'll skip the details of what was said after that. I've listened to angrier folks before. Too bad that they have to be subjected to the fallout of the irresponsible actions of others.

I then called Cincinnati Bell to get their reading on the situation. They said that they have had experience with this type of problem, and a number of successful prosecutions, especially in the cases involving interstate defendants. I didn't press for details.

Well, Roger, that's it for the time being. Now, you go and do the right thing.

1268. Ranger 2950dx

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-23 00:00:00 UTC
From: Jim Teague <jteague@erols.com>
Message-ID: <3953F823.84184D27@erols.comX>
Source record: 108590

Anyone know anything about the new 2950 from Ranger that can get 12 meters as well as 10?

Is this a completely new circuit board?? I have a standard 2950. Anyway to get 12 meters on it?

thanks

1269. Alinco DJ-V5T--Any opinions??

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-23 00:00:00 UTC
From: Tom Seabury <tseabury@value.net>
Message-ID: <3953F362.B9FA62AF@value.net>
Source record: 108591

I've been looking at the Alinco DJ-V5 and I played with one for a few hours.
It seems like a very good value for the street price of $219. The Audio seemed
very good and the FM broadcast stations came in great. I like the 2+ watts with

the $12 four AA battery case and the unit come with the 5 Watt Battery.

I didn't get it on the air and I'm wondering if it's is good as it seems.

Thanks,

de KO6ro Tom

And to boot I'm ticked off at Prez. Bill for doing NOTHING about the petrol prices going through the roof. I can't believe such incompetence, disregard and neglect regarding an issue of national priority. He's making it tougher for his Veep to get in because if OPEC is not contained and forced to pump a hell of a lot more and faster, we will have tremendous inflation, unemployment and ultimately a recession which will overshadow all the economic achievements attained since 1992.

While Jimmy "wolfie" O'BESE had his father sodomize him on a daily basis. That was the only entertainment in the chronic alcoholic O"Brien family. In a battle of wits, thrice convicted druggie Jimmy is heavily unarmed. Go back into Deja, you'll see postings of Wolfie/pissbowl's Paulding County, GA criminal record. You'll also see pictures of his city dump he calls home.

You are correct. Basically we have evolved into a "group" type of
situation. In otherwords, most folks find a group they like and join
in. In fact it is difficult to find "clear" frequencies on either 75
or 20 ssb. But I still tune around for a CQ. So go for it. CW is
losing ground these days. But you will hear a lot more CQ's there
still.

Have fun

Its obvious that Rob don't know the difference between a conservative
and a facist. But to try to calm him down.(he he) I have no problem
with taking out all liberals. I support "re-education" in the style
perfected by world famous folks like; Stalin, PolPot, N. Vietnam,
China, Cuba.. etc. The ultimate example of libralism gone unchecked.

I consider them a blight on our great nation, and directly responsible
for the state it is in...period!

Now oh great ignorant one.....stick that in your pipe and smoke
it...but be sure you find a "politically correct" area to do it in.

1292. Roger wiseman, KC8JBO, replies to ... all and sundry

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-23 00:00:00 UTC
From: "David J. Windisch" <davidw@copper.net>
Message-ID: <RYK45.959$LG1.2525@newsfeed.slurp.net>
Source record: 108647

To save time and trouble, I've collected a sampling of Roger's answers.
His knowledge of the vulgar is breathtakingly encyclopedic, and he deserves
much more widespread opprobrium than he now gets.

K3BHJ
****
6-19

Poor "wolfie," he spends lots of time in between trolling the
streets panhandling and soliciting men for blowjobs on the 1 900
"gay sex" phone services.
According to court records, he has quite a record of sex-related
crimes.

Poor baby. You'll get over it Lloyd.

Bwhahahahahahahahahaha!!!! At least I knew who my father WAS.
Obviously, you can't say the same.

But what's YOUR excuse? I noticed you have a record of trolling
the public restrooms in bus stations, etc, to solicit for
homosexual trysts.

HorseDICK. According to the women in your area, yours' barely
measures 1 inch.

Well, it would be different than taking a shit in YOUR
delapidated HOUSE, wouldn't it?

But you're still a coward.

More drivel from the child molesting David. Still molesting that buck-
toothed, obese, pimply-faced daughter of yours?

Bwhahahahahahahahaha!!!! Find out, DUMBFUCK

I KNEW you'd respond. You're too OBVIOUS.

Try harder, TWIT.

It's just more blowhard blustering from the Windybag.

He never had much of one to begin with. His is as pickled as
Windbag's and his suckboy "wolfie's."

****

6/23

Why don't you blow your brains out, you've got nothing to lose.

While Jimmy O'Brien still lives with his aging, obese (two of a kind) truck stop whore, Donna. They live in a filthy, delapidated "house" on Hiram Sudie Road, about 5 feet from the road. The interior of his hovel looks like the city dump, with trash and animal and human feces abundantly littering the floor. The kitchen, with it's over 40 types of diseases, was featured in a local newspaper article concerning the CDC. O' Brien has no family, except his fatassed wife and autistic grandson, who will follow the family tradition of excess eating, drug use and alcoholism.

"Wolfie" is really the known qrmer Jimmy O' Bese, er, O'Brien, a fatassed, three time convicted drug dealer felon.

LOL!!! Dream on, Jimmy, you couldn't hack your way out of a wet paper sack. Although from the looks of your hovel, you'd like to.
Too bad you are so enamoured of me you make up shit. Oh, by the way, I talked to Riley this morning about your qrming tirade today.

It sounds like you're a little on the gay side yourself.

1293. Pitbull/wolfie aka W4AMP info

NEWSLINE RADIO - CBBS EDITION #1130 - 04/09/99
(**********) (* *) (* A M A T E U R *) (* *) (* R A D I O *) (* *) (* N E W S L I N E *)

Hams deny FCC charges Two hams who received warning letters from the FCC have told the ARRL that they are the victims of inaccurate information. Newslines Bill Burnett, KT4SB, has more: James O'Brien the third, of Hiram Georgia was one of the two sent a Warning Notice by the FCC. His went out on March 15th. In it, the regulatory agency indicated that O'Brien, that or someone using his callsign was and we quote -- "deliberately interfering with and jamming radio communications" on 75 meters. The FCC also charged the station with coordinating on 2 meter FM with another station to interfere with stations on various 75 meter frequencies. The regulatory agency identified this other station as Charles Parris Jr., of Smyrna, Georgia. At the time of the alleged transgressions Parris held the callsign KE4KXP. He has since changed his call to K4JMZ. A week later, on March 24th, the FCC's Riley Hollingsworth, K4ZDH, said that he received assurances from O'Brien regarding the allegations outlined in the Warning Notice. Hollingsworth told the American Radio Relay League that he had talked with O'Brian and the matter was closed for now. But, in a call to the ARRL, O'Brien, who is a League member, denied any wrong doing. Instead, he asserted that the FCC Warning Notice was based upon and we again quote: "totally false and inaccurate" information from a third party. Also claiming to be the target of the same misinformation is Charles Parris Jr., K4JMZ. He also received a warning letter from the FCC indicating that he, or someone using his callsign, was deliberately interfering with and jamming radio communications on 75 meters. Also, that the station was coordinating on 2 meter FM with W4AMP to interfere with stations on various 75 meter frequencies. But on March 24th, Parris also telephoned the ARRL. He too is a League member, and he too emphatically denied any wrongdoing. And like O'Brian, he also suggested that the FCC Warning Notice was based on incorrect information from a third party. The ARRL report did not say who supplied the alleged inaccurate information. Nor did it indicate why the two hams called the League to proclaim their innocence.

Bwhahahahahahahahaha...You had to lie even to the League, the FCC, and anybody to get your fat ass out of this one....I'd say that the information WAS accurate...
given YOUR record of death threats, jamming etc on the air on 75 and 20 meters.

Just for giggles:

Unca' Wolfie told me to send a little song to you and Riley.
(To the tune of "The Gingerbread Man")

Run, run as fast as you can,
You can't catch me,
I'm the top gun man.

Let me know if you like Haiku, Mr. Wiseman & I'll write some
for you. Unca' Woofie won't admit it, but he thinks that
you're hilarious. Let's call today "Day One" of your idle
threats. Each day I'll update the post. 88, Milly

1320. KC8JBO, menace to ham radio that signs W5YI and ARRL to his posts

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-23 00:00:00 UTC
From: JBOisaqrmer@webtv.net
Message-ID: <11363-3953A031-39@storefull-104.iap.bryant.webtv.net>
Source record: 108675

I would strongly urge all W5YI VE's and ARRL members and VE's to forward all of the filthy, vulgar, libelous, and hateful posts that the known QRM'er KC8JBO has made on these groups that he signed with both the call of W5YI and the ARRL to the leaders of these organizations. As a member of both of these groups I am appalled with his hate and hostility torwards all amateurs in the newsgroups and on the air in general. His justification of these attacks by including W5YI and the ARRL in his sig line is a black eye to both of these groups and ham radio in general. Why Riley Hollingsworh and the FCC has allowed this hatemonger to run wild is beyond me. KC8JBO's main goal in ham radio is to insult, threaten, and harass other amateurs. He is a total detriment to ham radio. He has not made one helpful or useful post to the Internet, only insulted, threatened, and harangued others with the most filthy language imagineable. His on air operation is no different. Disguising his voice ,he hurls insults on frequencies where Riley has finally got the hams to get along. JBO's every waking hour is spent causing strife in ham radio either on the air or on the Internet. Several hams are taking steps to remove this menace from amateur radio. I urge all others that have been harassed by this individual to contact rholling@fcc.gov, president@arrl.org, and W5YI and inform them of your disgust and contempt for his using of their identies on his filthy posts. This idiot has done more harm in ham radio in two years than KV4FZ ever did. let's get this lid off the air and out of ham radio once and for all.

1326. A quiz for AF2Y

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-23 00:00:00 UTC
From: "J. Duffy Beischel" <duffyb01@fuse.net>
Message-ID: <sl7hg4ule7f69@corp.supernews.com>
Source record: 108681

A quiz for AF2Y. OK now, no cheating.

1. Ted Kennedy, Charles Schumer and Barbara Boxer strongly denounce private gun ownership. Their bodyguards, however, carry:

A. Berettas
B. Glocks
C. Garbage can lids
D. Slingshots
E. Very heavy purses

2. You and your baby daughter are awakened in the middle of the night by your estranged, abusive ex-husband. Although you have a restraining order against him, he is drunk and beats down your front door with a crowbar screaming, "If I can't have you, nobody can!" You should:

A. Call Barbara Boxer.
B. Call 911, and tell them that they should arrive within 30 seconds.
C. Threaten legal action.
D. Grab a Ping-Pong paddle.
E. Reason with him (maybe he was an abused child).

3. Since 1987, 34 states have enacted concealed carry laws. Violent crime decreased in these states and the anticipated "Dodge City" mayhem never materialized. Even critics were surprised. Concealed carry succeeded because:

A. Sunspot activity decreased after 1987.
B. Trigger locks rendered guns inoperative and therefore safe.
C. Sarah Brady scared the crooks away.
D. A healing wave of pacifism swept over the hearts of criminals in these 34 states.
E. Janet Reno said that crime should stop.

4. Schools, churches, subways, and restaurants have often been assaulted, but rarely military bases, police stations, or shooting clubs. The reason for this is because:

A. The targets aren't sitting or kneeling.
B. VA benefits are lost if you shoot a soldier.
C. You can't enter an army base without bumper stickers.
D. Schools don't threaten felons with detention hall.
E. All of the above.

5. Logic, reason, and common sense:

A. Are irrelevant if they contradict your feelings.
B. Should not apply to firearms.
C. Defy opinion polls.
D. Pale beside hysteria, fear, and political ambition.
E. All of the above.

6. Every dictator always disarms his victims, before beginning to annihilate freedom loving people. The reason for this is because:

A. Guns cause crime.
B. Guns cause accidents
C. Guns cause suicides
D. Being defenseless is the only way that mothers can demonstrate their love for their children.
E. All of the above.

7. The FBI states that every 5 minutes a woman is raped. Because of this you should:

A. Wear crotchless panties
B. Carry extra condoms
C. Always have an inflatable mattress in the trunk of your car
D. Invest in pepper spray scented underwear
E. Don't vote for a Democrat

His knowledge of the vulgar is breathtakingly encyclopedic, and he deserves
much more widespread opprobrium than he now gets.

K3BHJ
****
6-19

Poor "wolfie," he spends lots of time in between trolling the
streets panhandling and soliciting men for blowjobs on the 1 900
"gay sex" phone services.
According to court records, he has quite a record of sex-related
crimes.

Poor baby. You'll get over it Lloyd.

Bwhahahahahahahahahaha!!!! At least I knew who my father WAS.
Obviously, you can't say the same.

But what's YOUR excuse? I noticed you have a record of trolling
the public restrooms in bus stations, etc, to solicit for
homosexual trysts.

HorseDICK. According to the women in your area, yours' barely
measures 1 inch.

Well, it would be different than taking a shit in YOUR
delapidated HOUSE, wouldn't it?

But you're still a coward.

More drivel from the child molesting David. Still molesting that buck-
toothed, obese, pimply-faced daughter of yours?

Bwhahahahahahahahaha!!!! Find out, DUMBFUCK

I KNEW you'd respond. You're too OBVIOUS.

Try harder, TWIT.

It's just more blowhard blustering from the Windybag.

He never had much of one to begin with. His is as pickled as
Windbag's and his suckboy "wolfie's."

****

6/23

Why don't you blow your brains out, you've got nothing to lose.

While Jimmy O'Brien still lives with his aging, obese (two of a kind) truck stop whore, Donna. They live in a filthy, delapidated "house" on Hiram Sudie Road, about 5 feet from the road. The interior of his hovel looks like the city dump, with trash and animal and human feces abundantly littering the floor. The kitchen, with it's over 40 types of diseases, was featured in a local newspaper article concerning the CDC. O' Brien has no family, except his fatassed wife and autistic grandson, who will follow the family tradition of excess eating, drug use and alcoholism.

"Wolfie" is really the known qrmer Jimmy O' Bese, er, O'Brien, a fatassed, three time convicted drug dealer felon.

LOL!!! Dream on, Jimmy, you couldn't hack your way out of a wet paper sack. Although from the looks of your hovel, you'd like to.
Too bad you are so enamoured of me you make up shit. Oh, by the way, I talked to Riley this morning about your qrming tirade today.

It sounds like you're a little on the gay side yourself.

With every post, David Windbag Windisch proves how IMPORTANT I am in his life. His efforts as part of my PR team won't go unrewarded. I suppose his wife and daughter could use some plastic surgery, as well as deformed, balding Dave himself.

Maybe I'll stop by their main offices in Mt. Vernon, OH, letting them know about your online behavior, Windbag.

It might have been Hillary, she can play an organ. LOL!!!!!

Balding, punched David Windbag casting aspersions upon others.
(606) 385-6772 give him an earful.

How's your pimply faced daughter, the rotund one, Schlampe Windbag?
Oh, and additionally, poster-boy for Rogaine, it must be the fact that you're approaching senior citizen status and your altzheimer's is kicking in.

Oh, so you admit you use it, huh?
You can either stop these pointless attacks and I'll do the same.
Simple as that.

Poor Windbag. How's your Miststueck of a wife today?
<ue=umlauted u>
Windisch= brrezy, windy, empty, lame....quite appropriate.

I bet she can recite Karl Marx, too...lol!!!
--
It can't be a "cult of personality," because he doesn't have one.

Poor Jimmy..so jealous.

Get em' Doc. Jimmy O' Braindead is up to his usual childish tricks.
Did you know he was suspended from EBay for shill bidding?

1329. Wake up TAPR!

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-23 00:00:00 UTC
From: horseshoestew@my-deja.com
Message-ID: <8iua4j$vk8$1@nnrp1.deja.com>
Source record: 108708
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.digital.misc

Inexpensive Long-Range High-Speed Wireless Networking is now possible. It is time for TAPR to drop the FHSS radio, and their "not invented here" attitude, and start educating people on how to set up high-speed stations and networks.

After years of development, it is evident that TAPR's 900Mhz FHSS radio is going down the path of TAPR's other infamous doomed radio project of the early 90's: The packetRadio. Worse still, many amateurs look to TAPR for guidance in high-speed wireless networking, and since they don't see any information coming from TAPR, they wrongly assume that high-speed networking is too difficult. With simple $120 Part 15 wireless networking cards available, who needs a FHSS radio that operates on a band where Amateurs are secondary users? TAPR needs to wake up, face the facts, cancel the FHSS radio, and start educating the public on how to build inexpensive high-speed wireless stations and networks.

TAPR's place in history is becoming tarnished...

Hi Jay,
It would probably beat the pants off of today's DC- light rigs. The only problem I see is that transverters I am familiar with (DEM, MM, SSB) are really designed for a small segment of 2M and getting them to operate across the entire 4 MHz will probably be difficult. Most people use transverters w/ HF rigs because they want the very best in weak signal performance. Why not optimize the transverter for CW/SSB and pick up a cheap FM rig for 2m?

On a smaller scale, the concentration camp is a good idea. Put all the liberal politicians in one and let them work to pay back all the give-away programs they have robbed hard working taxpayers to finance.

KK7HO doesn't really mean it when he says:
>KKKevin go away!

Now Timmy .. let's don't censure RRAM. Kevin's input stimulates some of the best repartee' on here. Telling Kevin to go away is sort of like .. hmmm .. sort of like when W1WCR won't let W9ART and WA9KJI check into The Great Liberty Net.

Keeping the dialogue open to all viewpoints keeps things more interesting and gives the flame-throwers something to shoot at. And sometimes, the agenda is barely hidden.

Take for instance the Radiosigs-Guy. The flame-throwers think he's a liberal, Pro-AlGore KommieKrat But if you look closer, he's generating zillions of votes AGAINST The Amazing AlGore. So much so that I fully expect President Bush to offer him, the Radiosigs-Guy, a cabinet post. Hopefully, he'll remember all the "little people" on RRAM.

Now regarding the publicity Kevin's ex-wife has been getting. I won't go there. You may if you like. If she's an expert on cults lately, maybe she could do a piece on "Prophet" Stair and Robert Tilton.

1344. FS (2) Standard C-228A---GREAT----

I have for sale TWO (2) STANDARD C-228A 144/220 MHZ handheld transceivers. I am the Original owner, non smoker, I have all the ORGINAL boxes, packing material, and Orginal manuals that look new. The 2 wall chargers are new I never used them because I used the Standard CSA160 drop in charger....These are all the items included..

1. TWO (2) Standard C-228A 144/220 MHZ handheld transceiver both in

Excellent Condition
2. TWO (2) Standard CLC-521 Leather Cases
3. TWO (2) Standard CNB-153 7.2 volt 1000mah batteries
4. ONE (1) Standard CNB-151 7.2 volt 700 mah battery
5. ONE (1) Standard CAW-150 cigarette lighter adaptor
6. ONE (1) Standard CSA-160 Quick Charger
7. TWO (2) Yaesu MH-12 speaker/microphones. Which work great on the Standard handhleds.

AGAIN THE EQUIPMENT IS IN EXCELLENT CONDITION, AND I HAVE ALL THE PACKING MATERIAL, AND ORIGINAL BOXES.......

.....$715.00 SHIPPED UPS INSURED IN THE UNITED STATES ONLY......

Thank You & 73,

Leo (310) 670-6969

There's a difference between discussing facts and issues -- and
issuing gross and ignorant insults about a man's family; just as
there is a difference between Rosie O'Donnell and a lady.

With all good wishes,

--

Kevin Alfred Strom.

While Jimmy O'Brien still lives with his aging, obese (two of a kind)
truck stop whore, Donna. They live in a filthy, delapidated "house" on
Hiram Sudie Road, about 5 feet from the road. The interior of his hovel
looks like the city dump, with trash and animal and human feces
abundantly littering the floor. The kitchen, with it's over 40 types of
diseases, was featured in a local newspaper article concerning the CDC.
O' Brien has no family, except his fatassed wife and autistic grandson,
who will follow the family tradition of excess eating, drug use and
alcoholism.

Yep, except for the Liberty Net on Saturday night, it looks like 3950 has been finally laid to rest. It seems like nobody, not even the demented WA9KJI, uses 3950 anymore. I guess WA9KJI finally got his wish, to destroy 3950. True, there are other reasons for 3950's demise, including the sad self-destruction of the "East Coast" group by inane infighting. But when all is said and done, the main catalyst that started 3950 on the road to ruin was the group that jammed the Liberty Net for years and years, namely WA9KJI, K5BLB, K5ZU, W9ART, and the rest of the swine associated with them. May they rot in hell.

3950 used to be a wonderful place to hear political and social commentary almost every night. Now it sounds like it did before radio was invented. Very sad indeed.

>
> Pal!

({:o())

Yep...Sooo... We see that the people who fear guns and want more gun control are paranoids...AND the people who think that they may need guns to overthrow our government in some type of impossible big emergency situation are bigger paranoids.....
Well I'm an even bigger paranoid because I can not entirely agree with either extreme side of this issue and thus I fear that the entire noisy majority will be against me. I need a security blanket...but don't want to be armed any more than the guys in the black helicopters...or do I? If I owned any guns I would fear that some crook might try to take them away and use them to shoot me...sooo I would have to hide them good and lock them up good so that if I get shot it would be done with somebody elses guns... Gosh..I fear even worse the fact that people might really believe that I don't have any guns and take advantage of that...BUT...

My guns need to be locked up so I can't get to them myself because I wouldn't want to use them on any person who would be proven innocent up until the time that he could be proven guilty of killing me. I can copy Morse faster than 20 wpm but I can't decide the motives of a potential maniac killer or a masked holloween trick or treater that fast and thus I can't be quick enough on the draw....or quick enough to give out candy that is properly labeled, sanitary and approved by the American Dental Association.
After all of this time I can't even figure out why O.J.'s gloves didn't fit him as well as his bloody socks...or what Manson and Dave Berkowitz were trying to prove...or why the Ramseys didn't watch or hear their daughter..
BUT IMHO we do need to keep gun control out of the hands of Big Brother government. After all the Feds can't even control gasoline prices effectively. All we need to do is require that all guns be registered and insured by private profit-making insurance corporations. Don't the profit making gas distributors control gas pump prices better than Janet Reno can? Private insurance corps will take care that no guns get sold and registered without paying for insurance and lawyers and victims or their heirs can collect only if guns are improperly used or improperly hidden. Private companies will be most interested in preventing people who have criminal records from registering guns...because such people might try to pay for insurance with stolen credit cards or phony checks. Grandfathers will have to pay double rates if they have grandchildren who might be smart enough to find their guns. There can be no senior citizen gun insurance discounts...nor any quantity group discounts for members of large non-government malitias. People under 21 will pay so much for gun learners permits that they might have to learn to steal to satisfy their gun habits. However, a discount might be given to avid NRA members who go to old John Wayne or Charlton Heston movies. Rates might increase geometrically in proportion to the number of guns registered by an individual....so that only Bill Gates could afford to insure more than 12 operating system guns per year.
In short ...only predictable paranoids and government employees shall be given the "right to keep and bear arms" at reasonable private insurance rates. I dunno about the folks who aren't paranoids...I'm betting that they either won't have any guns or if they do... they won't suspect that any boogiemen will find out if they aren't registered... so it won't matter.

Without recognizing all of the ammended changes made to The United States Constitution, it would be OK to shoot native American Indians and run-away slaves on sight, as well as women and/or people under 21 who try to vote and all people who dare to sell or drink any alcholic beverages without a medical prescription or a pious religious ritualistic reason! Don't we think it might be time to define (and ammend the Constitution) more carefully as to which types of paranoids and malitias need to be privately insured "to keep and bear arms" and what the rates should be or if the private insurance should be co-

managed with a government Shootercare plan for those paranoids who are disabled or below the poverty level?

While this off-topic post may have little to do with Ham Radio, it might have to do with keeping miscellaneous gun control/freedom posts out of this Ham NG, because all of the paranoids on both sides might upset some paranoid Hams if we don't stop this nonsence. IMHO Hams have enuf to be paranoid about without any of this gun stuff. Hams can't disobey government regulations. Hams Radio owners must agree to many more government restrictions than gun owners. A rock singers can sing about "41 Shots" on the Internet!....Heck...Hams can't even sing about anything on their radios. Whistle at anything but a single testing tone and you break the rules. Ham Radio can not even be for the birds!

A gun in hand is worth two knives in the bush; Keep your powder dry, Check your guns at the door, and Don't take any wooden nickles or give quarters to the enemy...even in loose ex-change... of shots fired around the world from Lexington or sour grapes from Concord;
Modern techies don't want to beep at 5 wpm...Modern women don't much care for minute men...

Leave time for breakers...

Check batteries and generators...
Prepare for Field Day!

Ham need MORE license classes,

Not so much as the "old" 3950 was an RF Magnet for every nutcase
and Eight-Ball we had in this hobby. All the cukoo-cukoo birds hung
out on it at night and 14.313 during the day, thus leaving the rest of
ham radio clean and in the clear. (Every town should have it's trailer
park where all the lower caste can be herded together you know)

Would it work? Yes

However, remember that 10m is 28.000 to 29.7 (or in the case of an older rig, probably 30.000. So if you were looking to do 2M cw/ssb the rig would be ok. However, you will still not make it completely into the FM subband as you top 2M freq would only be 145.700MHz, and you still need to be able to do offsets and PL-tones.

If you are looking to do FM, it would probably be cheaper just to by a used 2M HT.

Good Luck!

I have just moved to a new office building and the FM and AM radio reception is terrible. I am very close to a window so I did not think that I would have a problem. What is the best FM tuner that money can buy? I have been reading about the GE superradio (can't seem to find one locally), the kloss 88, and the C-Crane (many good AM reviews but not much about FM). FM is tbe most important thing for me.

Please cc replies to the group to me at...

This may or not be helpful to you but it sounds like the opportunity exists for you to stream online radio stations through your computer and speakers at work if you are connected with the internet.

Otherwise, the GE SuperRadio is available at Universal Radio in Ohio (check the search engines) for about 60 dollars.

There are amplifed indoor FM antennas but the possibility is great for interference from office equipment, particularly computers. If its a brick and steel building its best to bring a drill to work and make a small hole thrhough the sash of the window and hang a wire for AM or a dipole for FM outside. Just let them droop. If that is out of the question then tape them to the window. Neccessity is the mother of invention. Good luck.

de Bill

In Denmark we have to take a special certificate from the government, in order to use the radio band UHF/VHF (I dont know if that is the case in the USA, but never mind). I am waiting for my test, and meanwhile I wanted to try out some radio transmission, but are there anny frequencies, like to low ones used by Walkietalkies or other, that are legal to use without a government certificate ? If so, is there any documentation ?

Hope you can help me !! Thanks

In the USA you have two choices. Citizen Band, which is 11 meters.
And the new "Family radio service". It is up in the UHF range.

I am not sure you even have to. On VHF the village idiot could make sense of it. On HF the traditional practice is to suffix it with /W4 on CW and 'Portable W4' on phone -- the G, GM, GW, GI, GJ thing is British practice, so far as I know unique in the world sort of like ring mains.

At the risk of telling you something you already know, the two meter band is 144-148 with repeaters above 146 on 30 or 15khz splits, input low on 146 and high on 147. The newer 145 machines are input low on 20khz splits. The UHF ones are on 5Mhz splits in the 440-450 range. I have not the slightest idea about local practices. If you have the time, get a Repeater Directory from the ARRL http://www.arrl.org to lay out the area.

There are enough British tourists in Orlando that telling the locals you are the toll taker on Wigan Pier probably won't work anymore :-) Don't be too surprised if you encounter a few dozen of your countrymen in the process.

Enjoy!

Dick McCollum N0BK

1384. Non-standard DBS uses?

Newsgroup: rec.radio.amateur.misc

Does anyone know of things you can do with a DBS system like pick up signals from non directv/Dishnetwork satellites? Any "mods" (not card hacking)?

Along those lines what is the signal range of the LNB and could it be used to pick up non-DBS signals?

jdawdy@usa.net

1385. Field day: the bands are alive with the sounds of QSO's!

Never heard so much activity on HF before! Wall to wall QSO's on 20M, 40M, and some on 15 and 10M. Noticed that 80M is empty though, though 80 isn't a daytime band. Nor any activity on the WARC bands.

Ben,
Did anyone get the kid's NRA membership number? I wonder
who sold the gun to the kid? Was it registered? Did they
send in the required paper work to the local laws enforcement
agency before selling the gun to the kid? Did they observe
the required waiting period before selling the gun to the
kid? Did he buy it at a gunshow? Did the kid carry it
concealed? Jeezz, the ACLU should be notified! Poor kid
probably won't get out in time to collect his Social Security.
Lets start a collection for his defence! Send you nickels
and dimes to me, use the call book address.

WARC-1979 was held in Geneva, Switzerland, with positive results for Amateur Radio. Three new bands were
assigned to the Amateur Services at 10100 - 10150 KHz., 18068 - 18168 KHz. and 24890 - 24990 KHz. (30M, 17M, 12M). Not sure of the dates of activation. DXing is allowed on the "WARC" but not contesting. For modes of operation in these bands see URL:

For DirecTV, there is little else up there, I think only a package on
G3r.

Dish has more flexibility the DirecTV, but not enough.

Ku is 11.7-12.2 Ghs, and linear polarized (H/V)
DBS band is 550 Mhz above normal Ku, and circularly polarized,

A primestar dish/LBF will do what you want, not saying you'll get
anything
though.

1393. Summer Scandal Quiz for AF2Y

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-25 00:00:00 UTC
From: "J. Duffy Beischel" <duffyb01@fuse.net>
Message-ID: <slca8dm7jev159@corp.supernews.com>
Source record: 108542

Summer Scandal Quiz
Summer officially arrives in Washington when:
A. Democrats blame Republicans for the heat
B. GOP wimps wear short-sleeve shirts
C. Gasoline prices hit $2 per gallon

Who's really responsible for gasoline price hikes?
A. Price-gouging oil producers
B. Out-of-control EPA Regulators
C. Clinton-Gore letting OPEC cut production

How can Al Gore solve his fund-raising scandal problems?
A. Release more incriminating transcripts
B. Promise to reform the system
C. Raise more soft money

Jan "The Man" Reno says the worst thing you can do in an investigation is:
A. Let facts dribble out
B. Be in too much of a hurry
C. Actually investigate

Energy Secretary Bill Richardson's best cover-up for Bill Clinton so far is:
A. Gasoline price hikes
B. Nuclear secrets to the Chinese
C. Monica's job interview

Why will little Elian Gonzalez soon be returning to Cuba?
A. Freedom don't mean crap
B. So the U.S. can do business with Castro
C. Today's courts follow polls, not the law

How will Kneepad Liberals in the Press keep busy until the conventions?
A. Bashing Bush for executions in Texas
B. Watching Elian way bye-bye
C. Blaming big oil companies when gasoline prices hit $3 per gallon

What would get Al Gore to fix his Tennessee tenants' toilet?
A. An embarrassing story on "60 Minutes"
B. Tracy Mayberry delivers Keynote Address at GOP Convention
C. If the Mayberrys were a black family

What have we learned from the current gun-control debate?
A. Charlton Heston can still deliver his lines
B. Rosie O'Donnell's bodyguard carries a gun
C. Rapists won't use trigger locks

When will Congress devise a real Energy Plan?
A. After more meaningless hearings
B. After a bi-partisan report from a
Blue-Ribbon Panel
C. After prices hit $4-per-gallon

Which story can we expect to be really hyped this summer?
A. Due process for killers
B. Guessing which "Survivor" will be kicked off the island
C. Disputing polls showing Bush beating Gore

What's Al Gore's dumbest quote?
A. "I invented the internet."
B. "Gasoline prices should be higher."
C. "Bill Clinton will be remembered as one of our greatest presidents."

What did the Independent Counsel's Travelgate Report actually prove?
A. Independent Counsels are worthless twits
B. We now have the 42nd Most Ethical White
House in History
C. Hillary lied, but he still can't indict her

If Election 2000 were held today:
A. GW Bush would be elected president
B. Republicans would still control Congress
C. Election 2004 would begin tomorrow

In spite of nearly eight years of sleaze and scandals, how has Slick
managed to stay in office?
A. 20 years of dumbed-down education
B. Biased reporting by the press
C. Gasoline prices haven't yet risen to $5-per-gallon

Excellent post, Duff-Man. Hits a lot of nails on the head .. real hard. It may be days or weeks till the Radiosigs-Guy sees the post, however. He's gone to a high-level meeting with Governor Bush and a few champions of right-wing-ism.

As you have seen on RRAM recently, the Radiosigs-Guy has provoked a lot of right-wingers (IE taxpayers, gun owners, church-goers, guys with full time jobs, etc) to get off of dead center for the upcoming election and rid the system of KommieKrat scoundrels.

I say again, the Radiosigs-Guy will earn a top post in President Bush's cabinet. Hopefully, the Radiosigs-Guy will be overseeing the new justice department. And if that's the case, Komrade Klinton, Queen Hillary and The Amazing AlGore will be waving bye-bye to the network cameras as they board the next bus for Leavenworth.

We can always hope, can't we?

1400. Re: Register Liberals, not guns.

Newsgroup: rec.radio.amateur.misc

~~~~And some people want this guy to win~~~~~~~
From the Record: Al Gore: Increase Gas Taxes

"There is not a single passage in that book [Earth in the Balance] that I would disagree with, or would change."
-- Al Gore, interview with Gannett News Service, March 23, 1999

"Higher taxes on fossil fuels ... is one of the logical first steps in changing our policies in a manner consistent with a more responsible approach to the environment."
-- page 173, Earth in the Balance, by Vice President Al Gore

"Gore ... argued that the [gasoline] tax should be retained. Clinton could be attacked on character if he dropped the gasoline tax now, Gore said emphatically and emotionally."
-- Washington Post, June 7, 1994

The Clinton-Gore Administration recommended:
A 50-cent per gallon gas tax, estimated to cost motorists an additional $47 billion in the year 2000 alone.

Seven new energy tax alternatives including:
An "at-source, ad valorem tax" on the value of the fuel at the point of extraction;

An "end-use ad valorem tax" on the fuel at the point of sale;

A motor fuels tax on the retail price of gasoline and diesel;

An oil import fee.
-- A May 31, 1994 internal EPA memorandum

"What if we ... raised [taxes] on the burning of fossil fuels?"
-- page 348, Earth in the Balance, by Vice President Al Gore

KK7HO blurts out:
>is about as stupid as
>blaming General Motors for road rage.

Great idea, Timmy. Nothing stupid about it. See .. if GM hadn't made so darned many vehicles, the road rage drivers wouldn't have such easy access to vehicles. So let's do the Rosie thing. Let's blame cars for road rage. Makes more sense now, doesn't it.

I think mayors of major cities should launch lawsuits against GM, Ford and Chrysler for all the road rage crimes now. All we need to do now is invent a trigger lock for cars to prevent them from being used by the wrong people.

This is an idea The Amazing AlGore would love. Take it away, Radiosigs-Guy. Here's a few million more Bush votes waiting to happen.

Zepp is trolling:
>Not dead, in jail or a slave?
>Thank a liberal!

As for not being dead, I'll thank God. As for not being in jail or a slave, I'll thank the constitution.

Don't get me wrong, there's plenty to thank liberals for. Government give-away programs that we taxpayers have the privilege of financing, the least ethical administration to be in government since Ahab and Jezebel, and an ever-faster erosion of our constitutional rights. And a lot more, but we won't go there now.

>Warning: Contains ideas

I looked .. it appears to contain someone's brain on drugs.

>Pay your taxes so the rich don't have to.

Surely you wouldn't be so cruel as to say that to illegal immigrants and welfare parasites.

>For all things liberal/leftist

You're whistlin' in the wind, Zeppo. Most guys on RRAM are pretty middle class. Most of us work for a living. Most of us pay too much taxes. Most of us pay our bills on time. Take your left-wing silliness somewhere else.

Republican .. it still has a nice ring, doesn't it, guys?

The NRA doesn't matter. Surveys don't matter. Polls don't matter. UFOs don't matter.

The ONLY thing that matters about gun ownership is:

1. - We have a GOD GIVEN RIGHT to defend our family and property, with guns if necessary.

2. - It is the DUTY of our government to honor and defend that RIGHT.

3. - If our government fails to do so, or tries to prevent us from owning guns, THEN THAT GOVERNMENT, BEING HOSTILE TO IT'S OWN CITIZENS, NO LONGER DESERVES TO EXIST, AND SHOULD BE REPLACED.

"Political Correctness is nothing but tyranny with manners."

There is at least one article in QEX regarding the use of DBS dishes to receive 10ghz signals, and I believe there is a similar article in QEX on modifying the LNB. This was in reference to possible use with P3D.

I would say that qualifies as a topic for an amateur radio newsgroup.

Harry wonders:
>I'm a Democrat, what the hell does that have to do with handguns?
>

Well, Harry, if I may hazard a guess here, it would be that the major proponents of gun control / registration / confiscation are KommieKrat politicians and their supporters. Komrade Klinton and The Amazing AlGore .. both KommieKrats, both pushing to restrict the rights of gun-owners. The large and loud Rosie O'Donnell .. enough said .. thank God she's one of y'all and not one of us.

So, Harry, if you're a Democrat who appreciates the freedom of legal gun ownership, you may want to alter your habits at the voting booth this November.

Granted, The Amazing AlGore is a brilliant individual. He invented the internet, solar energy, space shuttles and the cure for several fatal diseases. (Or not.) But he's all wrong on constitutional rights regarding the right to own firearms.

Ychthulu posts another good one except:
>THEN THAT GOVERNMENT, BEING HOSTILE TO IT'S OWN CITIZENS, NO LONGER DESERVES
>TO EXIST, AND SHOULD BE REPLACED.

I'm with you all the way, Ych-Man. One small difference on your closure, however. Replacing the government is a scary thought. Let's simply return it to the original intent .. a constitutional republic.

This very thought should strike terror into the hearts of all KommieKrat politicians. A return to the constitutional republic idea would mean that KommieKrats would no longer be able to buy votes with government give-away programs.

But I think the long-term benefits would outweigh any short term inconveniences worked upon those who prey upon taxpayers.

I'm consistently amazed at the aggressive ignorance and malevolence of right wingers, but then, if they were decent educated people, they'd be liberal democrats.

I'm a card carrying Liberal Democrat and have watched right-wingers wrap themselves in the flag all my life. Many have implied and even stated that Liberals are agents of the evil one, and dedicated to spreading naughtiness and government aid to those that actually need it. Remember the "L" word campaign? No anti Liberal slander has been too farfetched, obscene or improbable for it not to receive a respected and credulous hearing at any 3rd rate country club or talk show. I suppose right-wingers feel that fibs and fabrications repeated often enough might achieve an aura of veracity.

Most Liberals are mindful of Samuel Johnson's dictum that "Patriotism is the last refuge of scoundrels" and find the patriotic exuberances of Right-wingers not only tacky, but also often hypocritical. The recent right-winger promotion of the flag burning amendment is a case in point. Idealization of the symbol and indifference to what it stands for in the interest of political gain.

In fact, a good case can be made to support the view that it is Liberalism not Conservatism that more accurately reflects American political and social traditions. The mind boggles at where this country would be if progressives hadn't prevailed at critical points.

Consider. Liberal Americans started the American Revolution, while their more conservative Tory brethren sat on the fence or supported King George. Conservatives damned Sam Adams as "A reckless adventurer of bankrupt fortune." Thomas Paine was called a "rabble rousing scribbler." After the event was a success, conservatives fought and successfully defeated Liberal attempts to end slavery. Fortunately Liberals of that era managed to push through the Bill of Rights.

Four score and seven years later, conservative southern oligarchs embraced treason in a desperate attempt to preserve slavery and a feudal agrarian society. Oh sure, modern right-winger apologists for the Confederacy argue state's rights and Yankee Economic oppression (Northern merchants wanted their bills paid on time), but no less a person than Jefferson Davis had no such illusions. His first address to the Confederate Congress was an impassioned defense of the institution of slavery. He cited its preservation as justification for his and the Confederate oligarchy's exercise in treason. Even today the Confederacy remains the beau ideal of more extreme right-winger elements. You don't see Liberals waving the Stars 'n Bars.

Did conservatives support women's rights, equal rights for minorities, the conservation movement, the right of workingmen to organize, pure food and drug acts, social security, oversight of Wall Street and a host of other positive social movements which have made our society the envy of the world? One guffaws at the question.

When Liberals were warning the country about the dangers of Fascism, right-wingers were palsy walsy with the f�her and his cronies. The months before Pearl Harbor saw Right-wingers whooping and hollering for appeasement of the Axis and damning the Brits. It wasn't Liberals who a few years later spread the outrageous lie that President Roosevelt instigated the Japanese attack.

When decent citizens finally realized that civil rights legislation with teeth was needed to end the Civil War, it was right-wingers who fought the idea with fanatic zeal. Did right-wingers oppose the Viet Nam war? Of course not. Most, like Chickenhawks Pat Buchanan, Pat Robertson, Newt Gingrich, Dick Armey and Rush Limbaugh cheered the effort on. Usually in mufti and from a safe distance. Indeed, many right-wingers were like a reactionary ex in-law whose political philosophy was dominated by bigotry and anti-semitism. This self appointed patriot successfully dodged the draft in WWII and Korea, yet saw no hypocrisy in encouraging others (including me) to fight in a criminal war.

But, this is getting tedious and I've already made an easy point. It's easy to find things opposed by right-wingers, but what do they stand for? After years of diligent investigation and careful perusal (bicarbonate at the ready) of GOP platforms, I've come to the conclusion that right-wingers are for only three ideas: A. Only the rich deserve government aid. B. They should not have to give it back or pay taxes. and, C. Keep those icky people out of the neighborhood. Some patriots.

Jerry

They have one every four years. This time it's in Philadelphia.

Any word yet on whether the Black Panthers are going to terrorize the
national GOP convention with a calm and reasoned application of the
second amendment?

You know, we HAVE to ask Snorts what he thinks about the Panthers and
their march on the Texas GOP....

G'Day to all...
Thanks for reading this message..!!

I'm trying to find out wether someone knows of the LinKT
Packet program has been ported to work under RedHat Linux.??
Unfortunately, as you probably knew, currently it works
using the SuSE Linux ONLY.

Any who is aware of this program, could you please let me
know..!!

Thanks in Advance..

The Icom 756 Pro is a totally differnet radio than the IC-756. Both share the name Ic-756 and that is where the similarity ends.I agree it is frustrating to spend all your hard earned $ and then see a newer model with more bells and whisles. Isn' that the way auto manufactures operate ?
Do you expect Ford to update a older model Taurus that is not even close to the insides of the newer one ??
I think Ten Tec is the only manufacturer that does this upgrade if it is possible.....
Wait a minute..Kenwood recently offerered a upgrade on the TS-570 to the G version for $75 . I think if the upgrade is fairly easy the companies will do it but they always say int eh advertising that "they are not responsible for upgrading radios due to technical improvements".

Duuuhhhhhhhhh, Ben:

We have a sparkling record, in this group, of post-ers who, like you, put up something controversial without making their position on it unambiguous.

So, make your position unambiguous on the subject of your posting. And take the end of the tube, out of which the round issues, off your foot, unless you intend to blow another hole to match the first.

Or maybe is was the lack of a front-end on my cheap-ass HTX-10 10m rig.
Can you cay 8 kHz bandwidth?

Nevertheless I managed to work WA, MT, WY, CO, NM, and MO, as well as
all of the locals from the SF Bay Area, in about 1 hour of operating.
Everything in a 1 hop radius! Couldn't hear anything on 10 from closer
or further.

And HI was loud and clear at 9 AM PDT Sunday, sporadic-E I would think.
I've never heard HI that early in the morning. Yup would have been a
good day for 6.

I've had one for about 8 months now, and have been very happy with it. I use it both in the car and house. I, too, appreciate the fact that I can slap on the AA battery case and get more operating time.

It scans quickly, and I like the fact that I can name the channels. The big thing I liked was the coverage range at 440, this unit went the full 420-450, unlike the other HTs I saw that either started at 430 or 440.

The only drawback is the antenna connector, it uses a SMC connector, I'd have much preferred BNC. I put an adapter on it, so I can use BNC everywhere and quickly transfer from car to house to portable use.

I'd be very interested in knowing where you got your "Liverall Democrat"
card from!

Many people have been bandying about the "L" word on these NGs, and
accusing various people of actually BEING a librium, including me. But,
despite my protestations that the use of literal/preservative labels is
out-dated and meaningless, I could never find out either:

1) what specific beliefs would allow one to be accurately boxed and
labeled as a lickerall, and

2) how one could self-box and label oneself as such by getting a card
from a self-boxing and labeling organization that would allow one and
all to know who rightfully deserved the label, as opposed to the rest of
us who just have the label slapped on us by people who haven't bothered
to check the membership rolls of this wonderful accrediting group.

This way, in the future, when some Finkelstein-type ad accuses a
politician of being "too LIHBUHRUHLLLLL," the politician will be able to
say, NOT TRUE, because he doesn't have a card from the only official,
duly-authorized card-issuing lipperole organization. That would be a
major campaign reform device... and also help NGs eliminate some
gratuitous name-calling, too.

Those hard drives missing from Lost Alamos nuclear labs were found behind a Xerox machine where a paragon of governmental ineptitude attempted to copy them. They were sitting among stacks of billing records from Mrs. Clinton's halcyon days at the Rose law firm, and a stack of FBI background files on Republican operatives. The classified data on the drives may have been overwritten with 15 months of Al Gore's missing e-mail.

Hello all, I have a mint shape Ht1000 VHF package GREAT DEAL!

1) HT1000 VHF 136-174mhz H0KDC9AA3CN like 5 watt mint not a scratch.
1) NOS Like new Battery w/HD belt clip
1) 136-174 mhz like new antenna
1) BDN6676D Surveillance adapter w/PTT switch.
1) NTN7242 Motorola Leather swivel lock holster and t-strap (mint)
1) Motorola 1 hr drop in rapid Charger NTN1171A adjustable slot type
for using a larger capacity battery if you like

Just all checked 100% tested and aligned was used very very little since new!
And verfied by myself personly.

I will ship this unit with 30 day guarantee against any defects that are
not stated in above package!

Will program all 16 channels for 30.00 additional cost if list is provided

Standard Business freq. blue dot CSQ will be in radio. If your a ham radio
operator and provide call sign I will program 146.520 CSQ and one repeater FREE!
$435.00 shipped prepaid US postal money order.

I do accept Pay Pal payment, after it clears deposit in bank its shipped
that day!

This unit was in private standby use use, not public service its like NEW!

Please reply direct to e-mail address thanks...

1452. Judge's warning to anti-gun dupes

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-26 00:00:00 UTC
From: "David J. Windisch" <davidw@copper.net>
Message-ID: <2zQ55.27$Bx3.338@newsfeed.slurp.net>
Source record: 108454

If this dupe of a g-man-attorney isn't abusing the 2d amendment and the commerce clause, then ... who else could possibly abuse them?:

****
Tom Gresham is a columnist for Guns & Ammo magazine and host of "Tom Gresham's Gun Talk," a popular radio show broadcast in 100 markets across the country.
"It's a three-hour live program on Sundays that is kind of a cross between 'Car Talk' and Rush, but on the topic of guns," Mr. Gresham explains.
Recently, Mr. Gresham traveled to New Orleans to sit in on arguments in the Emerson Case, important proceedings for Second Amendment supporters being heard by the U.S. Court of Appeals for the Fifth Circuit.
The original decision by Judge Sam Cummings is a work of art, Mr. Gresham notes, tracing the history of government restriction of arms ownership (armor, firearms, swords) back to England, before there was a United States of America.
Now, a three-judge panel of the U.S. Court of Appeals for the Fifth Circuit is asking some tough questions of a government attorney, showing it isn't buying into the federal government's assertion that because a firearm once traveled across state lines it is "involved in interstate commerce."
An important point, because if a firearm did not cross state lines, it is a state matter and the federal government has no jurisdiction.
Observed Fifth Circuit Judge Harold R. DeMoss Jr.: "I have a 16-gauge shotgun in my closet at home. I have a 20-gauge shotgun. I also have a 30-caliber rifle at home. Are you saying these are in or affecting interstate commerce?"
"Yes," the government lawyer replied.
Said Fifth Circuit Senior Judge Will Garwood: "You are saying that the Second Amendment is consistent with a position that you can take guns away from the public? You can restrict ownership of rifles, pistols and shotguns from all people? Is that the position of the United States?"
"Yes," the government lawyer replied.
Judge DeMoss told the lawyer: "You shouldn't let it bother your sleep that Judge Garwood and I, between us, own enough guns to start a revolution in most South American countries."

Renee,

I would recommend the Butternut HF6VX or HF9VX verticals. They may be
ground mounted and used with a buried radial field. Even 12 radials of
25' or so will work quite well.

1461. It'd be nice to call G-2SZ...

Newsgroup: rec.radio.amateur.misc
Date: 2000-06-26 00:00:00 UTC
From: nebusj@rpi.edu
Message-ID: <nebusj.962064787@corollary.math.rpi.edu>
Source record: 108463

I'm one of the members of W2SZ, the ham radio club for Rensselaer Polytechnic Institute (an engineering school in upsate New York). We're an old and, alas, small club, and have been in search of some modest but interesting publicity-drawing ideas for the coming semester.

One thing that cropped up in our research was the discovery we're coming up on the 75th anniversary of a great DX contact, one between our (w)2SZ club and London-based (g)2SZ. This was a remarkable contact because of the shared callsigns, of course, and that at the time (g)2SZ was the world's DX recordholder, thanks to a call the previous year with New Zealand.

It was a natural thought to try to repeat the contact, on as close to the original bands as possible (they're no longer amateur bands, but we can approximate). Trouble is, there is no G2SZ, according to my research at www.qrz.com. There isn't even a 2SZ with any of Great Britain's prefixes, so far as I can find, nor even a G2SZA through G2SZZ. (I haven't checked the other prefixes for 2SZx, but I don't hold out a lot of hope either.)

Obviously, tracking down the successor club to whoever ran (g)2SZ in 1925 would at least preserve the spirit of the thing, but web-based searches for that haven't turned up a lot of useful information -- mostly reports of the anniversary of the 1924 (g)2SZ contact with New Zealand.

So, I'm hoping for help coming up with a sufficiently clever idea, some way to mark a most remarkable contact that we can use to hopefully enchant people with the history and romance and challenge of ham radio. Any ideas?

Thanks for any help.

Well spoken, Jerome. We're poles apart, but I like the way you articulated your position.

I'm one of those aggressively ignorant right-wingers. I've come to the conclusion that left-wingers are for only three ideas.
A. Only the worthless deserve government aid.
B. They (the worthless) should not have to give it back or pay taxes.
C. Give them (the worthless) government subsidies so they can buy houses in the neighborhood.

If you've concluded that the term "worthless" is a racial slur, then you're a narrow-minded bigot. Because worthless comes in all colors. Get over it.

Now with that behind us, go out and vote for every KommieKrat on your ballot. Hang a picture of LBJ over your fireplace. Send a really huge donation to Sarah Brady. Invite the local NAMBLA chapter to your son's next little league game.

Go all out, Jerome. Kick out all the stops. Show us aggressively ignorant right wingers what idiots we really are.

Ych-Man clarifies with:
>rather we should
>send all the treasonous politicians and bureaucrats packing or to jail.

Well for the traitors, jail would be the appropriate destination. Even with all the overcrowding, I'm sure they could find room for the Rodham-Klinton's and The Amzaing AlGore (inventor of the internet) and General Reno.

I think Brian had good intentions ..
>Sir! Your an idiot!

I think he meant to say "You are an idiot". But he loses on a technicality,
due to the original definition of the word "idiot".

We can only speculate why ND8VMIKE would like Crocodiles for eating Africans.
No doubt alligators eat dozens of Cajuns and Floridians each year. Does
ND8VMIKE like alligators?

Hello
I am looking for a multi band (10-80m) vertical HF antenna. I will be ground mounting it so I don't want huge radials to get in the way. What is a good commerically available antenna of this design? Please email me direct at: N9YLN@aol.com with any info or suggestions.

Ah yes... flame bait. But it's truly an impassioned, articulate and well thought out explanation of why anyone who doesn't see things the way the author does is not worth shit in their eyes.

There's two kinds of people in this world: those who say that there are two kinds of people, and those who don't.

One of the first things they teach you in self defense class, police academy and so on is that you always draw your gun to kill.
You never pull your gun unless you are ready in your heart to kill someone and when you do shoot, you shoot to kill or the person could come back and sue you or destroy your life in some other way.
You should also know when to pull your gun and when to fire responsibly.
Alot of people with guns give themselves a bad rap because they start pulling their guns in a situation that doesn't need a gun but the gun being pulled escalates the whole situation
and someone always gets hurt.

There is an outstanding book written by Massad Ayoob, the nation's foremost authority on defensive use of firearms, that deals seriously and objectively with the needs, use, circumstances of use, and potential consequences of use of firearms in defense. It's called, "In the Gravest Extreme." It's direct, blunt, and will put the fear of God into you the first time you ever pick up a weapon. It will open your eyes in ways urban legend, and anti gun ravings cannot. And it will spell out, chapter and verse, how, the first time you drop the hammer, you're life is changed irrevocably forever.
"In the Gravest Extreme," is not a propaganda vehicle, it's not a 'how to' book, but a very honest and truthful piece on what it means to find yourself in a situation that may require deadly force to survive, how to size up a situation, how to make the split second decision whether or not to release the trigger, and what you'll have to deal with afterwards.
It's sold in gun shops, at firing ranges, and at every gun show. It's not expensive, and it's an easy read.

Massad Ayoob is not a lightweight in the use of firearms. He's written the programs used to train local, state and federal authority in the use of weapons. He's been in firefights himself, as an officer of the law, and as a private citizen.

As a ARRL member for 22 years, the time has come for me to cancel my membership in the ARRL. I'm doing so for the following reasons:

1. All of the QRM'ing being done by KC8JBO & a host of others.

2. The hobby has become too expensive for me to keep up with.

3. Lack of blacks, jews & other "mixed" races on the bands.

4. All people talk about is WX, RST and their QTH.

5. Rich, WB2OTK was taken off the air by Hollingsworth.

ARRL..... please send me a full REFUND and CANCEL any QST's you would be sending me.

Not that you would know about an attorney's life, Jimmy O'Bese.
Although three times you had one to get you convicted, huh?
Oh, and I called Riley about your unidentified (at first) qrming of me
after I just gave my callsign on 14.275, and your obscene tirade
afterwards.. He seemed interested.

Poor fatassed Jimmy O' Brien. His specialty is going to hamfests and having his whale wife run a camcorder while he spews his crap at hams from a safe distance. He wouldn't dare get in somebody's face. Their scheme is to get "evidence" of "slander." Ballless O'Bese can't do any better, since his income subsistance check for his cognitive-disfunction doesn't cover all the expenses, like the junk food and drugs.
And DO get the league's lawyer after it, Dimmy.

While W4AMP couldn't get accredited for VE because of his past QRMing,
etc, with the FCC. His character or lack thereof, is probably one of
the reasons.
Jimmy, put down the ice cream tub, you'll bust your girdle.

I agree. I see that my last posting failed to communicate exactly what I meant. I did NOT mean that we should abandon our form of government, rather we should send all the treasonous politicians and bureaucrats packing or to jail. Of course, there's plenty of laws that will need to be cancelled, too.

I guess I should have distinguished between the form of government created by our founding fathers, which is fine, as opposed to the treasonous swine that have hijacked and perverted this form of government for their own evil intent.

"Political Correctness is nothing but tyranny with manners."

NO! NO! NO!

I hope Ole James R. Vining does not get kicked
off the air. I've been listening to his drunken rantings
on 3.853 for Years and he is without doubt
the most amusing character on 75 Meters.
Big Al can't hold a candle to Ole James! You haven't
laughed till you sides ached until you've heard old
"James" from Conroe in a drunken stupor. He is also
the greatest potty-mouths I've ever heard key a microphone.
Even some of the kilowatt CB'ers pale in comparason.
When ole James is loaded up drunk as a skunk he could whirl up
a cussin streak of the most flowing Anglo-Saxon that would turn
a truck driver's ears blue and knock over a mule at 50 yards.
What a loss! I'm glad I have some of his better rants from the old
days of .53 on tape for posterity. Perhaps I'll cut a CD and
sell em at Shelby.

re: FM reception

Your problem is most likely refected radio waves from buildings, thus you need a top-of-line tuner with good AM (amplitude) rejection specs. The "best" tuners would run you over a $1000, but excellent tuners are made by Kenwood and Yamaha, and can be found on Ebay for less the $100. Kenwood 5020 or 880D. Yamaha 1020 or T80. These are a few of the top-of-line models made by Kenwood and Yamaha. (these stereo tuners need a seperate amplifier and speakers)

If you still have problems try picking up an antenna attenuator at radio Shack to reduce possible antenna overload. Try doing a web search on FM antennas too.

Andrew,
Rather than spend a lot of money for an antenna you may not
use much, why not try a simple dipole. Not difficult to make,
and you can put one up almost anywhere. If it isn't what you
think you want, your not out much. If you make it your self,
it's even cheaper.
'Doc

As a Life Member of the IEEE and a VE and CE, I went to an IEEE meeting of volunteer engineers and college engineering students, who belonged to student IEEE chapters and were invited to be their guests. My goal was to present Ham Radio and radio licensing in general to the students. My speech was cut short by the engineer who ran the meeting. I had brought literature from the ARRL and W5YI as well as ARRL publications. None of the engineers who were present were interersted in looking at the pubs. As a net result: - None of the student guests indicated an interest in becomeing Hams or in preparing for any FCC licenses.

I was a member of the IRE (Institute of Radio Engineers) when it merged with the AIEE to form the IEEE. Many of the engineers in the IRE were radio engineers and hams who held no college degrees. Ever since the IEEE was formed there has been a policy of accepting, as proof of technical training, only college degrees from accredited schools. Thus the policy is definately against those engineers who are able to prove hands on experience as hams. Yep...The IEEE now holds little technical respect for Hams and that is not just my opinion.

Vince Biancomano is also a member of the IEEE. He shares my general opinion. You could ask Vince this same question. I think he could bring up some more good answers. Are you a member of the IEEE, Ed?

I know that there are some hams who are IEEE members...but my point is that the general policy of the IEEE is now based on ignoring Ham capabilities unless the Hams also hold specialized related academic credits. Although ARRL pubs have been advertised in some IEEE journals, there is an attitude that they are not up to what the IEEE considers to be technically professional. There are actually IEEE evaluating teams who must consider each technical research article. The IEEE could well be impressed by the works of TAPR members but they definately hold no respect for Hams or Ham pubs in general.

It is difficult to say exactly what the policy of an organization is because an organization consists of many leaders and members
BUT
We must all admit that the NRA is for guns, the ARRL is for ham radio transmitting, and the IEEE is for academia!...Yep... the IEEE is for acadamia even more than they are for the working degreed engineers...but that is another gripe that some of its members have made and is off-topic here. The IEEE has been called the "Institute of Elitist Educators and Employers" by some of its own members who are still working engineers (not retired like me) and would not like to be quoted here.

There are very few IEEE leaders who show up as Hams on any data-base. The practice of showing Ham credentials on the biographies of IEEE engineers, who publish or IEEE political leader wannabees has all but disappeared. Need you have more proof???

Please keep thinking,
Hams need MORE license classes,

Ahhh but the FCC does have thye ability to take away any Ham Band...and
theoretically this ability is not just based on PICON (public interest)
it is based on the value of Ham Radio to the USA as opposed to
other "services" which might want to use Ham frequencies.

> to be able to go forth and do; those few who have that interest have

accomplishment.

The exams can remain exactly as they are but we need some MORE exams to
show that Hams can qualify at higher modern levels.

> > What is that supposed to prove??? Such publicity can not be
expected

I was talking about the publicity that is spread by mass media,
newspapers and magazines NOT QST and QEX which are read only by Hams.

> > Emergency preparedness may still be an important asset BUT it is
only
> > one paragraph of the five Basis and Purpose paragraphs of Part 97!
>
> Yes, but it is the one listed first,

At the time Part 97 was first written it well deserved first billing
BUT my point is that it no longer does.

> and by my read, only one of the five
> basic purposes addresses ONLY technical issues.

Well your reading comprehension must be able to see that the second and
third as well as the fourth depend on technically capable Hams. Read
them again and report to this class.

> The second and third give
> equal billing to the communications and technical aspects of Amateur
Radio.
> By that count, the tally is:
>
Corrected tally: -
Non-Technical Purposes of Amateur Radio: 2
Technical Purpose of Amateur Radio: 3
>
> Of course, counting the bullet points is silly;

Yep...Ham Radio is just a silly hobby....The FCC regs are silly...Part
97 defines the basis and purpose of a silly hobby with silly bullets.
I say this all in utter SARCASM...because I can not accept calling
anything in Part 97 silly...for if we do...all that goes with Amateur
Radio is silly? Is that what you think Ed? If you think the basis and
purpose of Ham Radio is silly then why don't you, and any other ARRL
people who think it is silly, try to get Part 97 changed???

Maybe you should advertise a silly hobby in "Madd Comics". Nah...
Ham Radio is NOT a silly hobby.

> 97.1 gives a pretty clear
> indication of what is expected of us, but none of us address all the

points
> equally. As a Service, IMHO, we continue to meet them.

That is true...We went into that before and all agreed.
BUT
These conditions should not be limiting factors as to what parts of the basis and purpose of Ham Radio need to be emphasized in order for Ham Radio to survive in the FUTURE!

> > I like the way you are continuing to think Ed...You are disproving a
> > lot of opinions that are opposed to my views by your astute

saying that
> Amateur Radio should be devoid of things techncial, only that what I
believe
> you are proposing -- an examination process that makes Amateur Radio
the
> equivalent of a BSEE,

My hope is that there can exist license classes that are above present Extra class and are above a BSEE in the specialty of Radio Communication which may include the basics of what is required to earn a BSEE PLUS the technology that applies to practical modern radio communication. While it might overlap a BSEE it would NOT inlude all that a BSEE academic degree requires nor would a BSEE include all that a Super Ham Plus series of exams includes.

> would be of interest to only a few thousand people,

Ahhh..a few thousand hams who can demonstrate technical competance earned as being Hams can be pivitol in the survival of Ham Radio. A few rotten apples can also spoil it for everyone.
> I
> am sure, tipping the scales too much in the other direction away from
some
> of the important operational achievements of hams whose bent is
toward the
> level of technical in the present exams. Ham radio should always
be "a cut
> above," perhaps, but not so far above that it becomes elite.

A cut above who? That is the question.

I am not saying that Amateur Radio needs to be devoid of fun and games and contests or emergency volunteers or good will ambasadors BUT in the FUTURE we must emphasise its technical educational VALUE or it may not survive!!!

Try to pick up a copy of QST, the publication of the ARRL.

Though they don't guarantee the reliability of their advertisers, they
do a good job of screening them.

Hey Rog, finally made it back. Sounds as if you miss the
Hebrew National (daf2y) ham hocks. Tell you what you sicko
freak, you're welcome to nuzzle my back cheeks whenever you
wish. It's pathetic that you're even trying to kiss and
make up with Windy. Back to making the big bucks Wino.

Couldn't stop laughing, Mike. Don't ever miss a chance to
tear into Wino Roger from W.V. One source told me that his
mother dropped him on his head from a shopping cart. Another
source said that she left him locked up in a closed hot
car in July. Still another told me that he was bitten in
the face by a big rattlesnake, the type used in those weird
church services they have in Glendale.
Good news though. The doctors stopped the ringing in his
ears. The bad news. They found his brain disconnected.

I catch your drift. I guess its important to define things to a closer tolerance. Its just harder for me because Im such a lazy typist. You should see the callus on my one finger :))

1539. Ant. ?

Most of the time I call and respond to cq's
on 17 meter and 20 meter fone. Last time I demonstrated the rig for visitors
to the shack I called cq's and got dx responses on 20 meter fone. Hang in
there OM!

Brian,
If your speaking about ONE antenna to cover 20 - 80 meters,
and you want it to be directional, your talking about one very
very large antenna. You might give 'KLM' a call to ask about
their custom antennas. I hope your friend won the lottery
recently...
'Doc

I know:)) Thats kinda what I told him. How would you attack the problem
economically?
